Strikes and Lockouts in Other Countries During 1943

THE accompanying table gives the principal figures as to strikes and lockouts in certain other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days. The countries included in the tables published below are restricted to those for which additional information has been received since March, 1940 when a more extensive summary was given (L.G., March, 1940, p. 234). Throughout the year the latest available figures for each country are given in a monthly article in the LABOUR GAZETTE.

Methods of compilation of industrial dispute statistics vary greatly with various countries; definitions of a dispute also vary. In some countries figures as to strikes and lockouts are published separately, but, where possible, they have been included together in the table here given. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year; in other cases it is the number ending during the year; and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they were not parties; but exact information on this point is not always given. In the table given herewith the column showing the numbers of employees involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned.

Footnotes to the table indicate the nature of the statistics with reference to the above points.

Many countries publish statistics dealing with trade disputes only once each year or even less frequently, the figures being issued in some cases after an interval of some length. Most countries revise their figures when additional facts are brought to light, even though such revisions may necessitate changes in statistics published a considerable time previously.

In most cases the statistics dealing with disputes in other countries published in the LABOUR GAZETTE are obtained from official publications of the countries concerned.

*Strikes of less than one day's duration and those involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. †Disputes involving less than 10 workers and those lasting less than one day are omitted except when time loss exceeds 100 days. ‡Strikes lasting less than one day (or shift) and those involving less than six workers are omitted. (a) Disputes beginning in period. (b) Disputes ending in period. (c) Disputes in existence in period. (d) Strikes only. (e) Directly involved only. (f) Directly and indirectly involved. (g) It is not stated whether or not employees indirectly involved are included. (h) Preliminary figures.

Trade Union Membership in United States

MEMBERSHIP in trade unions in the United States is estimated at 13,500,000, in the report of the U.S. Department of Labor for the fiscal year ending June 30, 1943. Between 60 and 80 per cent of the country's wage earners are covered by collective bargaining agreements, according to the report.

Workers bought 300 million dollars worth of war bonds per month out of union treasuries or by individual subscriptions. "They also made additional savings to ward off inflation and thus spare themselves and their country from the confusions of an economy in chaos," the report adds. The no-strike pledge of labour leaders, and no-lockout pledge of management was kept at a rate better than 99 per cent during the fiscal year. The ratio of man-hours lost through strikes to time worked was $\frac{3}{100}$ of one per cent.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Logging

BRITISH COLUMBIA — VARIOUS LOGGING COMPANIES AND THE INTERNATIONAL WOODWORKERS OF AMERICA, LOCALS 1-71, 1-80 AND 1-85

Agreements to be in effect from various dates in October, November and December, 1943, and January, 1944, all to run to December 1, 1944, and thereafter from year to year, subject to notice. The companies recognize the local unions as the sole collective bargaining agencies for employees.

Hours: 8 per day, 48 per week, with overtime at time and one-half; cook and bunkhouse employees, watchmen, caretakers, first-aid attendants, fire fighters, boatmen and transportation workers are not covered by this limitation of hours; time and one-half for six specified holidays. Vacation: one week with pay after one year's continuous service. The wage schedules for each agreement are to be supplements to the agreements. Provision is made for seniority rights and for the settlement of grievances.

Mining, Non-Ferrous Smelting and Quarrying

AINSWORTH, B.C.—WARTIME METALS CORPORATION, KOOTENAY FLORENCE PROJECT, AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS

Agreement to be in effect from December 31, 1943, for one year or for a period during which a majority of the employees are members of the union, whichever period may be shorter. The parties to meet to consider a renewal. The company recognizes the union as exclusive representative of all its employees.

Hours: for all underground employees, 8 hours from portal to portal to constitute a shift; the regular working time to be 8 hours per day, a 48-hour week. Provision is made for seniority rights, and for the settlement of disputes.

Manufacturing: Vegetable Foods

VILLE LASALLE (MONTREAL), QUE.—STANDARD BRANDS LIMITED (COFFEE AND TEA PLANT DIVISION) AND PACKINGHOUSE WORKERS ORGANIZING COMMITTEE, LOCAL 240

Agreement to be in effect from November 15, 1943, to November 14, 1944, and year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all employees. All employees to be members of the union and all new workers hired shall become union members.

Hours: 8 per day, a 45-hour week. Overtime and all work on Sundays and holidays is payable at time and one-half. Rest period: all female employees allowed a 10-minute rest period in the morning and afternoon. Vacation: one week's annual vacation with pay for employees with one year's service. Provision is made for seniority rights and for the settlement of disputes.

KELOWNA AND OTHER LOCALITIES, B.C.—FRUIT AND VEGETABLE SHIPPERS, MEMBERS OF THE OKANAGAN FEDERATED SHIPPERS ASSOCIATION, INC, AND THE FRUIT AND VEGETABLE WORKERS' UNION (CANADIAN CONGRESS OF LABOUR)

Agreements to be in effect from June 15, 1943, to June 15, 1944, and thereafter from year to year, subject to notice. The employers recognize the union as the sole collective bargaining agency for employees on submission of proof that the union represents the majority of the employees; no discrimination against any employee because of union activities.

Overtime: all work in excess of 10 hours to be paid at time and one-half; all work in excess of 12 hours at double time. Vacation: one week's vacation with pay for employees after one year's continuous service. Rest period: optionally, at the request of the employees, a 10 minute recess twice a day to be allowed. Hourly wage rates as amended by Regional War Labour Board finding and direction October 28, 1943: receiver 55 cents; truckers, stackers, skidmen, car bracing, 50 cents (except for first two weeks' experience, 45 cents, and except those 18 years and under who are paid 35 and 45 cents); dumpers 50 and 55 cents; nailer operator 50 and 55 cents; hand pressmen (apples and pears) 55 and 57½ cents, 60 cents per 100 for over 100 per hour; hand pressmen (all stone fruits) 55 and 57½ cents per hour, 40 cents per 100 for over 200 per hour; labellers 45 to 50 cents (except 35 to 45 cents for those under 18 years); dispatcher 55 cents, truck driver 50 to 60 cents; cold storage—head checker 60 cents, other help 55 cents; processing plant—coopering 55 cents, acid men 55 cents, general help 45 and 50 cents for males and 35 and 40 cents for females; maintenance men—electrician, mechanic, 55 cents,

box repairing 52½ cents; boxmaking at piece rates, box sorters and checkers 35 to 45 cents: packers at piece rates. A cost of living bonus of $2.60 per week for female employees and male employees under 21 years, $3.10 for male employees is paid. Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Miscellaneous Wood Products

BRITISH COLUMBIA—VARIOUS SAWMILL OPERATIONS AND THE INTERNATIONAL WOODWORKERS OF AMERICA, LOCALS 1-80, 1-85, 1-118, 1-217, 1-357

Agreements to be in effect from various dates in October and December, 1943, and February, 1944, all to run to December 1, 1944, and thereafter from year to year, subject to notice. The terms of these agreements are similar to those of the agreements between locals of this same union and various logging companies as noted above.

Manufacturing: Metal Products

MONTREAL, QUEBEC — CANADIAN POWER BOAT COMPANY LTD. (AIRCRAFT DIVISION), AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 712

Agreement to be in effect from August 13, 1943 to August 13, 1944 or 1945 if no notice given. The company recognizes the union as the sole bargaining agency, as long as the union represents a majority of its employees. No discrimination against any employee because of union membership; the union agrees not to coerce other employees.

Hours: a 48-hour week. Overtime: time and one-half until 12 hours and double time thereafter; double time on Sundays and specified holidays. Hourly wage rates: tool and die makers (bench or machine), pattern makers, 90 cents; machinists, electricians, pipe and tube benders, fitters, joiners, sheet metal workers, electric welders, gas welders (on materials other than aluminum), aluminum welders, painters, moulders, cable splicers, buffers, sign writers, 80 cents; production workers—class "A" 65 cents, class "B" 52 cents; learners, labourers, sweepers and material truckers 45 cents; beginners 40 cents; storemen and stock chasers, 40 to 65 cents; control booth clerks 65 and 70 cents; timekeepers, production clerks and floor clerks 40 to 55 cents; inspectors 50 to 80 cents, examiners 40 and 45 cents; craters and rough carpenters, tool repair men 65 cents; millwrights, painters, plumbers, carpenters (journeymen) 80 cents; journeymen steamfitters and electricians, 85 cents; oilers 50 cents. Provision is made for seniority rights and for adjustment of grievances.

Trade

TORONTO, ONTARIO — THE DOMINION STORES LIMITED, AND THE DOMINION STORES UNIT OF THE CANADIAN RETAIL EMPLOYEES' UNION

Agreement to be in effect from May 1, 1943, to April 1, 1944, and year to year thereafter until notice. Agreement applies to two classes of employees: group I of grocery managers, meat managers, market operators, butchers, clerks, female clerks, female cashiers, delivery boys; group II of warehouse plant employees, male and female. The company agrees to employ only union members or those willing to become union members.

Hours: in group I, a 48-hour week for male employees and a 45½-hour week for female employees. In group II, Monday to Friday inclusive 8½ hours per day, and 4 hours on

Hours: in group I a 48-hour week for male Saturday for male employees; for female employees 8 hours per day, 3½ on Saturdays. Watchman work 66 hours per week. Overtime is payable at time and one-half in groups I and II. For work on Sundays and holidays in group II double time. Vacation: one week with pay after one year's service; two week's with pay after two years' or more continuous service. Rest period: all employees are granted a 10-minute rest period in morning and afternoon, excepting Saturday for those in group II. Provision is made for seniority rights and adjustment of grievances.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, page 86. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the Act include the extension of one new agreement and the amendment of seven others which are noted below. A request for the extension of a new agreement for municipal employees at St. Jerome was published in the *Quebec Official Gazette,* February 5; and a request

for a new agreement for police and firefighters at Sherbrooke was published February 12; a request for the amendment of the agreements for barbers at Rouyn and Noranda was gazetted February 12; for hardware and paint stores at Quebec, February 26.

In addition, Orders in Council were published in the *Quebec Official Gazette* during February approving or amending the constitution and by-laws of certain joint committees, and others approving the levy of assessment on the parties, or amending previous Orders in Council in this connection, by certain other parity committees.

Manufacturing: Fur and Leather Products

Tannery Industry, Province of Quebec

An Order in Council, dated January 29, and gazetted February 5, amends the previous Orders in Council (Labour Gazette, March, 1940, p. 282; February, 1941, p. 183; August, p. 1008, October, p. 1313; March, 1942, p. 353, September, p. 1097, December, p. 1490; April, 1943, p. 489, October, p. 1381) by including in zone II any employer of the zone III area who has a minimum of 26 employees. Any piece-work rates established prior to October 15, 1943, if higher than those fixed by this agreement may not be reduced.

Manufacturing: Textiles and Clothing

Dress Manufacturing Industry, Province of Quebec

An Order in Council, dated February 17, and published in the *Quebec Official Gazette*, February 26, amends the previous Orders in Council (L.G., Oct., 1940, p. 1075, Nov., p. 1202; March, 1942, p. 353; March, 1943, p. 340; June, p. 813) by extending the term of this agreement to April 1, 1945.

Manufacturing: Metal Products

Ornamental Iron and Bronze Industry, Montreal

An Order in Council, dated January 29, and gazetted February 5, extends the term of this agreement (L.G., Nov., 1941, p. 1424, June, 1942, p. 738, Nov., p. 1348; January, 1944, p. 70) to March 1, 1944.

Construction: Buildings and Structures

Building Trades, Three Rivers

An Order in Council, dated January 29, and gazetted February 5, amends the previous Orders in Council for these trades (L.G., May, 1940, p. 497, June, p. 609, Aug., p. 866; March, 1941, p. 334, Aug., p. 1010, Sept., 1942, p. 1097, Nov., p. 1348; Feb., 1943, p. 220; January, 1944, p. 70) by adding two names to the contracting parties of the second part.

Another Order in Council, dated February 17, and gazetted February 19, also amends the previous Orders in Council for these trades by adding one name to the contracting parties of the second part.

Building Trades, Val D'Or and Amos

An Order in Council, dated January 28, and gazetted February 5, extends the term of this agreement (L.G., June, 1941, p. 704, October, p. 1315, December, p. 1573; March, 1942, p. 353, February, 1943, p. 220) to February 11, 1945.

Building Trades, Montreal

An Order in Council, dated February 5, and published in the *Quebec Official Gazette*, February 12, makes obligatory the terms of an agreement between The Builders Exchange, Inc., of Montreal, the Retail Merchants Association of Canada, Inc. (Quebec Provincial Board), the Master Plumbers Association of Montreal and Vicinity, the Canadian Automatic Sprinkler Association, the Insulation Contractors Association; and Le Conseil des Syndicats des Métiers de la Construction de Montreal (The Council of Building Trades Unions of Montreal), The Building and Construction Trades Council of Montreal and Vicinity, L'Association des Plombiers, Soudeurs et Poseurs d'appareils de chauffage inc. (the Association of Plumbers, Welders and Steamfitters, Inc.), The United Association of Journeymen Plumbers and Steamfitters, Local 144, The United Association of Sprinkler Fitters of the Province of Quebec, Local 379.

Agreement to be in effect from February 12, 1944, to December 31, 1944, and for 30 days more pending the adoption of a new agreement. It applies to all engineering construction and building operations, landscape work (except maintenance landscape work), road work and erection, repair and demolishing work.

The territorial jurisdiction consists of the Island of Montreal and within 15 miles of it; however, outside the Island of Montreal it does not apply to labourers nor to building operations costing less than $25,000. The agreement does not apply to municipal or railway employees. For the elevator trades, the structural steel trade, the trade of steam generating mechanics, boiler-makers and re-inforcing steel erectors, the entire province of Quebec is included except in such places where a ratified collective labour agreement is in effect for these trades.

Hours: for skilled tradesmen, 8 per day, 4 on Saturday, a 44-hour week; for landscape workmen, shovel operators and pile driver men, team drivers, general trucking, cartage and hauling, 55 per week; for common labourers (and for mastic floor workmen, cement finishers and terrazzo workmen, when necessary), 9 per day, 50 per week; for linoleum and tile layers, etc., 48 hours per week; for road construction, 60 per week.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and eleven specified holidays double time.

The cost of living bonus is payable according to federal government Orders in Council.

Minimum Hourly Wage Rates

Trades—	Hourly rates
Asbestos coverers (other than pipe insulating mechanics)	$0.75
Bricklayers and cement block layers	1.00
Caulkers (construction)	.60

Minimum Hourly Wage Rates—*Con.*

Trades—	Hourly rates
Carpenters, joiners and millwrights on construction and including the following operations: concrete forms (yard or job), the erection of screens (wood or metal), sashes, windows, weatherstrips and shingles, siding, wood or composition, steel partitions and equipment such as counters and shelving, movable or movable and including hardwood floor laying	.90
Cement finishers	.75
Concrete re-inforcing steel erectors	.70
Cork insulation setters	.75
Electricians:	
Contractors	1.10
Journeymen	.95
Enginemen (hoisting)	.85
Enginemen (steam mixers)	.75
Enginemen (gas mixers)	.70
Enginemen (compressor)	.70
Firemen (construction)	.65
Hod carriers	.60
Labourers (common)	.55
Landscape foremen	.60
Landscape workmen (common)	.50
Lathers (metal)	.90
Lathers (wood and all other material)	.80
Lathers—wood (by the thousand)	4.00
Linoleum layers (muroleum or rubber, tile and sheet), waxers and polishers and asphalt tile laying	.65
Helpers and apprentices	.50
Kettlemen (flooring only)	.70
Marble setters	1.00
Masons (stone), including cutters on the job	1.00
Mastic floor layers	.80
Mastic floor finishers	.65
Painters—decorators	.80
Painters—spraymen	.85
Glaziers	.80
Plasterers (plain or ornamental)	1.00
Roofers, composition and gravel	.65
Kettlemen	.55
Riggers	.65
Sheet metal mechanics, slate, asphalt, tile, shingle (other than wood) and including toilet steel partitions and shelving	.90
Shovel operators (steam, gas, electricity) per week	50.00
When employed less than 44 hours during the week	1.10
Tile setters	.90
Terrazzo layers	.90
Terrazzo polishing machine operators (water polishing)	.60
Terrazzo polishing machine operators (dry)	.70
General trucking, cartage and hauling	.50
Carters, teamdrivers	.50
	(per week)
Material checkers and time keepers (without daily limitation as to hours of work)	$25.00
Watchmen (without daily limitation as to hours)	20.00
Watchmen employed also as firemen requiring 4th class certificate—(without daily limitation as to hours)	30.00
Yardmen (without daily limitation of hours)	25.00

The above wage rates may be reduced by 25 per cent for repairs of $500 or less on residences not exceeding $15,000 in value.

Apprentices' wages for trades requiring four years apprenticeship: from 30 per cent of journeymen's wages during first year to 75 per cent during fourth year; for trades requiring three years apprenticeship: from 45 per cent during first year to 75 per cent during third year; for structural steel industry 35 cents per hour during first year to 60 cents per hour during fourth year.

Plumbers

This section of the agreement applies to all pipe mechanics, employees engaged on all forms of frost, heat, insulation, cork and asbestos work with regard to the pipe mechanic's trade.

Hours: 8 per day, 4 on Saturday, a 44-hour week.

Overtime: time and one-half until midnight; work performed after midnight, and all work on Sundays and eleven specified holidays is payable at double time. Sprinkler fitters living in city of Montreal but working outside a radius of 10 miles from the Island of Montreal to be paid an extra $2 per day of 8 hours, or an extra $1 per half-day of 4 hours, to cover transportation fees and room and board expenses. Plumbers and steamfitters hired in Montreal to work outside the territorial jurisdiction of this agreement to be paid boarding and transportation costs in addition to regular rates. For work outside the city limits, hours may be varied to suit the time of leaving and returning of public transportation, but must not exceed 44 hours per week.

Minimum Wage Rates

Trades—	Hourly rates
Journeymen in plumbing and heating	.95
Sprinkler fitters	.97
Sprinkler fitters' helpers	.50
Pipe welders	.95
Junior journeymen—1st year	.65
Apprentices—1st year	.35
Apprentices—2nd, 3rd, 4th year	.40
Labourers	.55
Insulation mechanics	.97
Apprentices insulation mechanics—	
1st year	.47
2nd year	.62
3rd year	.77

A cost of living bonus of 5 cents per hour is paid over and above usual rates except on overtime work.

Apprenticeship: one apprentice to each journeyman and one junior journeyman to three senior journeymen per shop. In asbestos and insulation trades, only one apprentice to each five mechanics; apprentice pipe mechanics to serve 4 years, apprentice insulation workers 3 years.

Structural Steel Workers

This section applies throughout the province to all operations performed on the site of any structure involving the erection (or fabrication) of structural steel, tank or other plate work and the placing and installation of portable boilers and tanks, steam generator mechanics.

Minimum Hourly Wage Rates

Trades—	Hourly rates
Painter (structural steel)	.80
Structural iron erectors (all categories)	.95
Boiler Makers, erectors and including steam generator mechanics	.95
Helpers—boiler makers, erectors and steam generator mechanics	.70

Apprentices: 50 per cent of journeymen's wages during first year and 75 per cent during second year.

For structural steel, tank or other plate work and the installation of portable boilers and tanks under two tons in weight, 65 cents per hour.

Elevator Construction

This section of the agreement applies throughout the province, which is divided into three zones: the Montreal region, the Hull region and the Quebec region.

Hours: 8 hour day, 4 on Saturdays. Overtime and work on Sundays and holidays is payable at double time.

Hourly Wage Rates

Montreal Region—	Per hour
On construction, repair and modernization work:	
Mechanic	$1.00
Helper	.70
On contract service and contract inspections:	
Mechanic	.90
Helper	.63
Hull Region—	Per hour
On construction, repair and modernization work:	
Mechanic	1.00
Helper	.70
On contract service and contract inspections:	
Mechanic	.90
Helper	.63
Quebec Region—	
On construction, repair and modernization work:	
Mechanic	.90
Helper	.63
On contract service and contract inspections:	
Mechanic	.81
Helper	.57

Service: Business and Personal

BARBERS AND HAIRDRESSERS, QUEBEC

An Order in Council, dated December 17, and gazetted February 5, amends the previous Orders in Council (LABOUR GAZETTE, Aug., 1941, p. 1013; May, 1942, p. 631, Aug., p. 978; May, 1943, p. 639, October, p. 1382) by reducing the number of working hours in zone V. The other amendment does not affect the outline of the agreement already given.

Causes of Accidents in the United States

IT is pointed out in a recent report of the Office of War Information at Washington that accidents in war plants are "a major production and manpower problem." The seriousness of the problem is indicated by the statistics covering worker accidents in the United States from December 7, 1941 (Pearl Harbor) to the close of 1943; during which period there were 37,600 killed (7,500 more than in the military services for the same period), 210,000 permanently disabled, and 4,500,000 temporarily disabled (60 times more than the military wounded and missing). It is asserted in the report that injuries in industry in the United States, account for four times as many lost man-hours as strikes and that manufacturing plants have 50,000 workers absent every day because of accidents. Deaths and injuries on the job are occurring now at the rate of 270,000,000 lost man-days a year, the equivalent of the withdrawal of 900,000 workers for a full year from the production lines.

A study of 1,000 fatalities and disabilities by the United States National Safety Council led to the conclusion that carelessness on the part of workers and management caused 48 per cent of industrial accidents and lack of knowledge or skill accounted for another 34 per cent. In this same group of 1,000 cases, it was found that "35 per cent involved hazardous arrangement of equipment; 27 per cent improper guarding; 15 per cent defective agencies; 9 per cent unsafe dress and about 15 per cent no mechanical cause. Generally, two out of three accidents have both personal and mechanical causes."

It is stated that the total lost work time from on-the-job accidents in the United States from the entrance of that nation into the war until the end of 1943, amounted to 540,000,000 man-days—"enough to have built 7,500 average-sized merchant ships. . . . It is estimated that the damage and ruin of equipment in many types of accidents far exceeds the value of American cargoes that have been sunk (by submarine)."

Intensive efforts on the part of many agencies have been made to check this serious loss of manpower. Both federal and state governments, casualty insurance companies, technical engineering societies, the army and navy authorities, labour unions, and many employers of labour have taken an active interest in stemming the tide of industrial accidents. The central objective in the several approaches to the problem has been to create and foster a safety-conscious attitude in the thinking and practice of management and labour alike. It is stated as an authoritative opinion that "mental attitude is a determining factor in accident frequency." Stress is being laid on the need for and advantages of labour-management co-operation; the employment of trained "directors of safety" whose sole duty shall be the prevention of plant accidents and the provision of adequate health safe-guards for workers; also of safety engineers, who have demonstrated their ability to reduce plant accidents, as consultants and a general and persistent campaign of education.

Legislative Proposals of Labour Organizations

DURING February the four major labour bodies in Canada appeared before the Dominion Government and presented their proposals in regard to labour measures. Each organization was represented by a large delegation. The Canadian Congress of Labour made its appearance on February 11; on February 23 the Railway Brotherhoods submitted their memorandum; and the other two groups, the Trades and Labour Congress of Canada and the Canadian and Catholic Confederation of Labour both appeared on February 25.

Following is a summary of the more important features of the various presentations, together with the replies of the Prime Minister and the Minister of Labour. Included also in this section are accounts of the submissions of two provincial organizations, the New Brunswick Federation of Labour, and the Nova Scotia provincial executive of the Trades and Labour Congress to their respective governments.

Canadian Congress of Labour

THE Canadian Congress of Labour presented its legislative program to the Prime Minister and members of the Cabinet on February 11.

Members of the Cabinet present included the Hon. Humphrey Mitchell, Minister of Labour; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. J. H. King, Minister without Portfolio; Hon. I. A. Mackenzie, Minister of Pensions and National Health; Hon. J. L. Ilsley, Minister of Finance; Hon. J. E. Michaud, Minister of Transport; Hon. C. D. Howe, Minister of Munitions and Supply; Hon. N. A. McLarty, Secretary of State; Hon. J. A. MacKinnon, Minister of Trade and Commerce; Hon. C. Gibson, Minister of National Revenue; Hon. A. L. Macdonald, Minister of National Defence for Naval Services; Hon. L. S. St. Laurent, Minister of Justice; Hon. A. Fournier, Minister of Public Works; Hon. E. Bertrand, Minister of Fisheries; Hon. L. R. LaFleche, Minister of National War Services.

Introducing the delegation, Mr. A. R. Mosher, President of the Congress, stated that the delegates represented a paid-up membership of 250,000, but that for the purpose of collective bargaining the representation would approximate 350,000, which, together with the adult member of the families would really make a representation of some half a million persons. Mr. Mosher added that the representation was not designed for political purposes but represented the sincere views of the workers.

Mr. Pat Conroy, Secretary-Treasurer of the Congress, then read the memorandum in which were summed up the views of the membership.

Immediate and Post-war Unemployment

The memorandum opened with a discussion of the cancellation of war contracts with resulting unemployment among war workers, a situation which, in the opinion of the Congress, "transcends all other considerations at the present time and demands immediate attention by the Government and by the nation as a whole". Although recognizing that "the war is not yet over", the brief pointed out that "the budget for war expenditures indicates that a turning point has been reached."

The Congress considered that "the primary objective which the Government must now keep before it is the provision of 2,000,000 jobs for 2,000,000 workers now in the armed services or in war industries. The problem is a national one, and must be solved on a national basis. Leadership and direction must come from the Dominion Government, since the provinces are comparatively helpless and inexperienced, apart from financial disabilities, and privately-owned industry, operating to a considerable extent on an individualistic basis, is therefore obviously unable to make plans on a national scale for the industrial development which must be carried on to provide the necessary number of jobs."

The brief urged that the Government undertake immediately a "complete survey of Canadian industry and agriculture with a view to ascertaining the number of workers which can be provided for in these fields of industry". The co-operation of provinces and of municipalities should be sought, both in planning and in carrying out the plans which are adopted, it was suggested.

Existing controls on import and export trade should be maintained, the brief stated, as well as controls over raw materials and prices, with constitutional changes being obtained in order to carry out such a policy. Private enterprise and initiation should be encouraged within the framework of an overall plan of national production, the Congress considered.

Suggestions for post-war projects contained in the brief included the following: adaptation of Dominion-owned war plants to production of peace-time commodities; co-ordination of various methods of transportation in Canada under a system of public ownership and operation; a national food policy; a housing program; a national fuel policy, to include public ownership of Canadian mines; and rural electrification.

Lay-offs

The Congress expressed its belief that where the cancellation of war contracts left insufficient time to arrange new employment for laid-off workers, such workers should have added to their unemployment insurance benefit a sufficient amount to make up their regular wages.

Representatives of the workers should be consulted as far in advance as possible of a prospective lay-off, and should have an opportunity to discuss procedure with selective service officers. The principle of seniority should be observed, except where this conflicted with military demands. Laid-off workers should be transferred to new employment at similar wages.

Government Wage Control Policy

The Congress declared that it had been instructed by its affiliated and chartered unions to protest "in the strongest possible terms" against Order-in-Council P.C. 9384 of December 9, 1943, establishing a new wage control policy.

It was stated that labour organizations had not been consulted prior to the passing of the order; and that the recommendations of the National War Labour Board in its public inquiry had been to a large extent ignored. The new order was said to be far more stringent and inflexible than the previous wage control order, particularly in that it forbade wage increases to remedy gross inequalities or injustices except where the employer could pay such an increase without raising the price of his product.

The absorption of the cost-of-living bonus into the wage structure was approved, but it was considered that the bonus should not be frozen at rates which "have not up to the present time been properly adjusted." The anti-strike clauses in the order were strongly protested, particularly the provision placing the burden of proof on employees that their strike was not illegal, this provision being declared to be "a contradiction of a fundamental principle of British justice, namely, that a person charged with an offence is considered innocent until he is proven guilty."

Two other aspects of the order were termed "highly objectionable": the diminishing of labour's proportion of representation on the Board from one-third to one-sixth; and the power given the National Board to review on its own initiative decisions of Regional Boards, and to reduce existing wage-rates where it considered that a rate was unsound or caused gross inequalities.

Family Allowances

The Congress took a stand against the introduction of family allowances by the Government at the present time. It repeated the objections to the scheme which it had expressed during its convention last September, on the following grounds:—

> that family allowances could not be regarded as a substitute for adequate wage-levels, and that the taxpayers of the nation should not be required to assume the obligation of industry to pay proper wage-rates, and thus carry the burden of a low-wage industrial policy. Since nothing has been done to raise sub-standard wages, the proposal of the Government, as announced in the Speech from the Throne, to place before Parliament "a measure making provision for family allowances," is precisely what was condemned by the Congress convention.

It was stated that the Congress had "no objection to a system of family allowances which is embodied in a general system of social security." But the primary consideration, it was felt, should be the raising of wage-levels to a minimum at which the average family of five can be maintained in health and decency. The same consideration should apply to farmers for whom adequate incomes should be provided through the establishment of adequate prices for farm products. Allowances to rural and urban families with more than the average number of children were "not unacceptable to labour," in order that all children might have "fairly equal opportunities." But it was felt that "to freeze wages at sub-standard levels, and then try to compensate workers with young children for the lack of decent wages" was "an utterly unwarranted procedure."

Proposed Labour Code

The Congress expressed satisfaction that its officers had been given an opportunity to examine the legislation which had been drafted providing for a National Labour

Relations Board to administer a Labour Code, and that assurance had been given that their comments would receive careful consideration.

The Congress was in favour of collective bargaining legislation "guaranteeing to all workers the right to organize in legitimate unions of their choice and bargain collectively with their employers." It was urged that company unions be declared illegal. The Congress believed that compulsory arbitration should apply only to the settlement of grievances arising out of the terms of a collective agreement, and that all collective agreements should make provision for such arbitration.

Government legislation, the brief added, should list unfair labour practices by employers, with appropriate penalties and methods of enforcement. It should provide expressly for the check-off of union dues "where this is agreed upon between the employer and the union and authorized by the union members."

Although the code was to be restricted to war industry, it was felt that the federal Government might well establish a labour policy which could serve as a model for provincial legislation to cover industries which are outside federal jurisdiction in peace-time.

The Government was requested to obtain as soon as possible an amendment to the British North America Act under which the Dominion would have power to lay down minimum national standards of labour and social legislation, and to implement the Conventions of the International Labour Organization.

Labour Representation on Government Bodies

"Generally speaking," the brief declared, "labour has not been represented on various Government boards and other bodies dealing with production, or on boards whose work generally affects labour's interests." Adequate representation on all such boards was requested.

Labour-Management Committees

In regard to labour-management production committees, the Congress said that it was only recently that the Government had given this matter "any serious consideration," and this "at a time when war production is decreasing." It was felt that Government action was "at least two years too late to be of any great value." Although the Congress was prepared to co-operate in the matter, it was pointed out that "it is not the function of labour-management committees to assist in the liquidation of war industries and try to explain to workers why it is impossible to provide them with other employment."

Income Tax

Criticism was expressed of the present methods of income taxation, and it was asked that the Government exempt overtime pay and the cost-of-living bonus from income taxation. It was felt that levying a tax on the bonus defeated the purpose of making the bonus compensate for the increase in the cost of living. In regard to overtime, the brief cited the recommendation of the National War Labour Board that consideration be given to the unwillingness of workers to work overtime because of a feeling that they were required to pay undue proportion of their additional earnings in income tax. The brief observed that labour is ordinarily opposed to overtime, believing that a regular day's work is sufficient to tax the energies of any worker.

It was further asked that the exemption be raised to $1,500 for married workers and to $1,000 for single workers.

National Health Policy

In regard to the draft Bill on Health Insurance which has been under consideration by a Special Committee of the House of Commons, the Congress recommended that the health services provided should be "(1) nation-wide in scope; (2) preventive as well as curative, with emphasis upon prevention; (3) complete, covering all forms of treatment required; (4) open to all, irrespective of income; (5) democratically controlled, through fully representative bodies, on which lay members shall be in the majority, and (6) directed especially towards the improvement of health standards in the rural areas."

An increase in the number and capacity of hospitals, convalescent homes and medical schools was recommended, as well as encouragement of an increase in the number of doctors, dentists and nurses.

Other Proposals

Included in the other requests of the Congress for action by the Dominion Government were the following:—

> Establishment of a national policy in the coal industry, and appointment of a council containing representatives of labour, employers and the Government to deal with the fuel requirements of the country; to be matched by similar action in the steel industry.
>
> Granting of free transportation within Canada to members of the armed forces on furlough, and of post-free correspondence;

continuance of demobilized members of the forces on full pay and allowances until they can be gainfully employed; raising of the clothing allowance to at least $125.

Setting up of a representative committee to study a national immigration policy, to "make it possible for Canada to take a worthy part in the United Nations' program for world resettlement"; with provision being made for the employment of all Canadian workers before admitting immigrants.

Immediate steps to facilitate the entry into Canada of all refugees whom it is still possible to rescue, without regard to race, creed or financial condition.

That the Government use its influence towards the re-establishment of the League of Nations.

Continued support of the League of Nations Society in Canada in the "important task of educating the public with regard to the necessity of international co-operation for the maintenance of world-peace."

Appointment of a permanent Board of Conciliation and Review on which the organizations of civil service employees would be represented, to deal with matters affecting workers in the public service.

Reply of Minister of Labour

Replying to the criticism of lack of representation, the Minister of Labour, Honourable Humphrey Mitchell, stated: "We have more labour advisers in the Dominion to-day than the total personnel of the Labour Department prior to the war." Labour advisers on boards and agencies connected with the Department of Labour totalled 309.

The Minister said that the contribution made by employers and employees in assisting the Department and by their advice is of inestimable benefit. Referring to the National Selective Service Advisory Board, the Minister lauded the manner in which both employer and employee representatives had measured up to their responsibilities, and added: "We never make a move in major policy without consulting employer and employee representatives on the Board". In this respect he particularly referred to the service rendered by Mr. Mosher himself.

Dealing directly with the disputed wage control order, the Minister pointed out that the penalty provided in the old order of 1942 dealt with employers; in the new order it had been made applicable to employers and employees.

When the war broke out the Government immediately decided to protect the living standards of the Canadian people, and in trying to prevent inflation the Government has been successful. Emphasizing the measure of this protection, he pointed out that during the comparable period in the last war there had been a 54 per cent increase in the cost of living, while in the present struggle living costs had increased 18 per cent, of which 3 per cent represented the rise since the controls became effective.

The Minister pointed to a 71 per cent increase in trade union membership since the war started, and in this respect indicated that "in the old days trade unions had no place to go" for redress but that now they had recourse to regional and national boards. Indicating the protection afforded now to labour organizations, he instanced P.C. 4020 which made it illegal to intimidate a person wanting to join a trade union, and defined it as a "fundamental step in the right to organize" in this Dominion.

Remarks of Prime Minister

The Prime Minister, referring to the magnitude of the problems raised by the brief, pointed out that in addition the Government had the burden of conducting a war and that some allowances should be made on this account.

"It is easy to criticize", observed the Prime Minister, "but what is needed is as great an effort in the other direction."

Noting the attitude of the Congress in regard to family allowances, the Prime Minister stated in part as follows: "You find fault with the Government for introducing family allowances, but on the other hand you state you have no objection to such a program as part of a national social security system. In the Speech from the Throne it is set forth as a part of the social security program. I ask any member of this Congress to stand and say he is opposed to family allowances as a part of social security. There was never a thought to have family allowances as a substitute for fair wages.

"I have tried my best to meet the wishes of labour and in this measure we are endeavouring to achieve for the next generation that equity of opportunity which labour has declared as necessary.

"I ask if you find anything in this brief that suggests we are still in a terrible war". (At this juncture the Prime Minister indicated the seriousness of the situation in Italy).

The Prime Minister, in referring to the home front, stated that the situation resolved itself into two factors—the production of war materials and the battle against inflation. On the production front, he declared, "labour has registered a magnificant success", and then observed: "Is it not true that the future well-being of our country will depend on whether the cost of living can be kept down"? He considered that in the event of inflation

the workers would suffer most. Continuing, the Prime Minister said:—

"The price ceiling could only be maintained by co-operation between all elements —those in business had to make sacrifices— and equally labour has to see that wage stability is maintained. Far be it from me to say that there is not hardship for everybody, and I think it is marvellous the way both groups have seen the national necessity. But what is needed is a greater understanding that the Government has to put through certain Orders in Council. Sometimes the greatest good in this world is in what we are able to prevent".

Referring to the wage order which had aroused such criticism, the Prime Minister stated that last autumn when the order was planned, industrial unrest was very strong. The Government was obliged to take some action, but was now ready to amend the order.

Mr. A. R. Mosher

Mr. A. R. Mosher, President of the Congress, replying first to the Minister of Labour's observation on labour representation, stated the National Selective Service Advisory Board more nearly approximated what labour has requested than any other board or commission. He stressed that labour wanted representation on policy making and administrative bodies as well as advisory. In regard to family allowances, Mr. Mosher said: "The fact remains that the announcement followed an Order in Council freezing wages at dangerously low levels in this country, and until the Government is prepared to amend that order and to assure a minimum wage that will enable a man to feed his family, I don't think family allowances should be considered".

Commenting on the increase in labour union membership, he considered this was due, not because of Government agencies, but because there are more people employed, and because "we have had so many restrictive controls that workers felt the need of greater labour organization to protect themselves".

Mr. Pat Conroy

Mr. Pat Conroy, secretary of the Congress, observed "that this was the most satisfactory interview we have ever had with the Government." Mr. Conroy considered that much labour dissatisfaction would be avoided if the Prime Minister would ask labour to set up an advisory committee for periodic consultation. "For three years", continued Mr. Conroy, "I have stressed the seriousness of the situation in regard to labour relations and labour would have done a better job if it had received the co-operation of your Government. I have laid down suggestions as a basis for a nationally integrated policy of labour-management co-operation in the interests of war production. As a result of the refusal of the Government and industry we are not getting a return of 60 cents on the dollar in war production".

Emphasizing labour's part on the fighting fronts, Mr. Conroy declared that there was not a man present who was not closely represented by an immediate relative in the armed services. "Surely labour wants to do a job for its sons in the fighting forces".

In regard to wage and price control, Mr. Conroy stated "We have never opposed price control but we insist that wages do not constitute all the elements in price increases and a wage policy should take into consideration those factors".

In conclusion Mr. Conroy said that labour wished to be on friendly relations with the Government for the good of the whole country. "We want the best relations with the Government, not the worst".

Trades and Labour Congress of Canada

THE Trades and Labour Congress of Canada was accorded its annual interview with the Government on February 25. The memorandum of labour proposals of the organization was read by Mr. Percy Bengough, president, before the following members of the Government: Rt. Hon. W. L. Mackenzie King, Prime Minister; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. J. H. King, Minister without Portfolio; Hon. J. L. Ralston, Minister of National Defence; Hon. Ian Mackenzie, Minister of Pensions and National Health; Hon. J. E. Michaud, Minister of Transport; Hon. C. D. Howe, Minister of Munitions and Supply; Hon. J. A. MacKinnon, Minister of Trade and Commerce; Hon. William Mulock, Postmaster General; Hon. C. W. G. Gibson, Minister of National Revenue; Hon. A. L. Macdonald, Minister of National Defence for Naval Services; Hon. Louis St. Laurent, Minister of Justice and Attorney General of Canada; Hon. Humphrey Mitchell, Minister of Labour; Hon. Alphonse Fournier, Minister of Public Works; Hon. Ernest Bertrand, Minister of Fisheries.

Summary of Memorandum

At the opening of the memorandum it was stated that the delegation represented "a non-political trade union centre".

"We believe in doing first things first, and that the biggest and most important job confronting all Canadians to-day is still the winning of the war in the shortest possible time. To accomplish this successfully we must make every effort in every direction, and through every medium, for a one hundred per cent total war effort.

"This cannot be achieved by stoppage of work. No citizen can believe that a delay in production can advance the war effort. A delay in supplies and materials must prolong the duration of this war, and this automatically brings about a heavier casualty list of those fighting on our behalf.

"We do not agree that any section or group of society should endeavour to take advantage of the war situation. Thousands of our people in the armed services are making the supreme sacrifice so that we may continue to enjoy our liberties. We cannot agree that now is the time for political parties to utilize this crisis and waste valuable time in advancing their own political prestige.

"With such ideas in mind it naturally follows that we would much prefer to aid and assist the Government than to devote time to protesting undue infringements upon our liberties."

While acknowledging that controls were necessary in wartime, the memorandum declared: "We have to keep in mind, however, that people in the Government through their anxiety to further the war effort have tended to emulate the very things we are waging a war to destroy. We have to keep in mind that trade unions were destroyed in many lands and, with this knowledge, we have resisted, and will continue to resist, any misguided efforts of those in authority who seek to introduce unwarranted dictatorial methods in their attitude towards, and dealings with, Labour. In our opinion Order in Council P.C. 9384, Wartime Wages Control Order, 1943, distinctively comes within this category." The Congress welcomed the Prime Minister's assurance that this order was about to be revised.

In order that Canada might take its proper place at the peace conference, it was declared "vitally necessary for the Government to make every effort in bringing about a united Canada." The Congress expressed itself as "prepared to co-operate with your Government in doing all possible to bring about national unit, victory and a real Canadian democracy in which all can participate in a full life as complete as human ingenuity can make it."

Collective Bargaining

The Congress complimented the Government for passing Order in Council P.C. 1003 of February 17 establishing the right of employees in industries essential to the prosecution of the war to bargain collectively through the medium of the chosen representatives of their unions. The Congress further appreciated the fact that that consultation had taken place between the Minister of Labour and members of his Department, and officers of the Congress prior to the introduction of the order.

Labour Representation

The brief continued: "We wish to compliment the Government on the inclusion of labour representatives on the administrative boards of Victory Aircraft Limited, Wartime Food Corporation, War Assets Allocation Committee and War Assets Corporation Limited."

At this point Mr. Bengough interrupted his reading of the brief in order to compliment the Minister of Munitions and Supply on his action in accepting the resignation of the chairman and members of the board of Victory Aircraft, who, he said, had intimated that they preferred to resign rather than agree to the appointment of a labour representative.

Lay-offs in War Industries

The Congress suggested action to deal with lay-offs in the following terms:

"The members of this Congress are seriously alarmed about the lay-offs that are prevalent in our war industries to-day which is harmful to the national unity of this country. We would therefore appeal to the Government to immediately take steps for the establishment of a national committee to study this matter, said committee to be composed of equal representatives from Government, labour and management."

Fair Wages and Union Conditions

The Congress suggested that as a matter of Government policy in placing orders or contracts for war supplies, preference should be given to employers having labour agreements with their employees and observing union conditions.

Post-war Reconstruction

While commending the work of the Advisory Committee on Reconstruction appointed by the Government, the Congress asked that definite plans be made in order to avoid a period of economic dislocation and suffering similar to that which followed the last war. Support was urged to the International Labour

Office in its studies on post-war reconstruction and rehabilitation. The Congress submitted to the Cabinet a copy of its booklet, *Victory, What Then?*, summing up its views on the subject of reconstruction (see p. 262).

Family Allowances

The Congress went on record as being opposed to family allowances. Its stand was expressed in the following terms:

"There has been considerable publicity to the effect that your Government intends to introduce some system of family allowances. This Congress wishes to be recorded now as opposed to the suggestion, as in our opinion it is economically unsound. We cannot agree with the substitution of a system of family allowances for decent wages."

Other Proposals

Included in the Memorandum were a number of other proposals, among which were the following:

That a contributory National Health plan, including hospitalization, be established.

That free transportation be given at regular intervals to all enlisted men while in Canada to enable them to visit their homes.

That the wives and families of Reserve Army men receive subsistence allowance while the men are at camp.

That a more generous clothing allowance be given members of the Armed Forces on discharge.

That it be made compulsory for all ships, sailing on our Great Lakes, and coastal vessels, to adopt the "three-watch system"; that all Canadian ships, regardless of tonnage, should carry "ship-to-shore" communication for the purpose of safeguarding the lives of the crew; that the Canada Shipping Act be so amended to incorporate the conventions and recommendations of the International Labor Office covering all Canadian vessels, whether inland, coastal or foreign-going.

That a Dominion-provincial conference be held to establish an adequate and uniform scale for old age pensions.

That a more generous supply of beer and liquor be made available in all provinces, provided that this did not "interfere or divert from our war effort".

Minister of Labour

Hon. Humphrey Mitchell, Minister of Labour, complimented the delegation on the conciseness of the presentation. Referring to the services rendered by the Department of Labour, the Minister observed that many of the things which labour had sought for years had now come to function. Instancing this, he declared that "we are on the road to providing an employment service never dreamed of four years ago." He hoped for the elimination of controls as soon as practicable, but pointed out that "every move has been made in consultation with the employee and employer representation on the National Selective Service Advisory Board.

Referring to the new labour code, he indicated the care that had gone into its preparation by stating that 22 draft regulations had been drawn before the final publication of the measure and that 107 suggested changes had been received for the 21st draft alone. He paid tribute to the provincial governments on "their great degree of co-operation" and commended Mr. Bengough for his valuable aid in drafting the code.

In conclusion he considered that "that measure properly administered will be the charter of labour relations in this Dominion."

Hon. T. A. Crerar, lauded the Congress on its "constructive attitude", and considered the restrictions would disappear when the war is over.

Prime Minister

The Prime Minister, Rt. Hon. W. L. Mackenzie King, declared he had never listened to a brief "more constructive and helpful" and thanked Mr. Bengough and his officers "for giving the Government this help".

Indicative of the progress achieved in labour legislation, the Prime Minister touched on the measures enacted in the last 30 years—due largely, he said, to the co-operation of the Trades and Labour Congress of Canada.

The Prime Minister emphasized that "not enough had been said of the fact that men have worked loyally under restrictions. It is the sensational which attracts attention. One or two strikes have been featured on the front pages, but the public are not aware of the thousands of strikes which have been avoided.".

Continuing, he stated that the wage control order was issued "to meet a critical situation but was not intended to penalize anyone who was doing the right thing in the right way. It was designed to stop certain individuals from trying to secure advantages at the expense of others." He considered it unfortunate that it did not appear with the new labour code, but he stated that in its three months of operation no one had suffered. He promised that the order would be revised.

Dealing with family allowances, the Prime Minister repudiated the suggestion that these were in any way a substitute for decent wages. "May I say that if such was intended I would be the first to give the suggestion the cold shoulder", he declared, and added:

"In fixing wage rates economic laws do not take into account the size of a man's family. Large families are an asset to the state but may be a liability to the parents. Family allowances were part of the objective of a

national minimum of social security and human well-being.

In devising such a plan account must be taken of the burdens that fall on those with large families as compared with small ones. Family allowances help to equalize the burdens among all elements of the community and make for equality of opportunity in life."

In conclusion the Prime Minister stated that "as far as labour is concerned the allowances would be applied to food, clothing, shelter and education—all of which create an extra demand for the things which labour is producing and thus make possible greater wages."

Canadian and Catholic Confederation of Labour

THE Canadian and Catholic Confederation of Labour submitted its program of labour proposals to the Prime Minister and the members of the Cabinet on February 25. In addition to the Prime Minister, Rt. Hon. W. L. Mackenzie King, the following members of the Cabinet were present for the interview: Hon. Humphrey Mitchell, Minister of Labour; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. J. H. King, Minister without Portfolio; Hon. I. A. Mackenzie, Minister of Pensions and National Health; Hon. C. G. Power, Minister of National Defence for Air; Hon. J. L. Ilsley, Minister of Finance; Hon. J. E. Michaud, Minister of Transport; Hon. C. D. Howe, Minister of Munitions and Supply; Hon. N. A. McLarty, Secretary of State; Hon. J. A. MacKinnon, Minister of Trade and Commerce; Hon. Colin Gibson, Minister of National Revenue; Hon. A. L. Macdonald, Minister of National Defence for Naval Services; Hon. L. S. St. Laurent, Minister of Justice and Attorney General of Canada; Hon. A. Fournier, Minister of Public Works; Hon. E. Bertrand, Minister of Fisheries; Hon. L. R. LaFleche, Minister of National War Services.

Introducing the delegation, Mr. Alfred Charpentier, president, thanked the Government for enacting the new labour Code. "It may not be perfect", he observed, "but it can be improved". Refuting criticism of his organization that it had failed to improve conditions among textile workers, he declared that the Confederation had improved working conditions 100 per cent in the last seven years. "We have presented 25 requests to the National War Labour Board for increases which have been granted."

Continuing, Mr. Charpentier asserted that "in the aluminum industry our movement prevented two or three strikes which had been fomented by another union".

In its memorandum, read by Mr. Gerard Picard, secretary, the Confederation noted that "the Canadian Constitution extends to the Federal Government, in wartime, a temporary jurisdiction over matters which, in normal periods, are under the jurisdiction of the provinces," and it "shares the opinion of those who favour the post-war return to the provinces of all the jurisdiction which they possessed prior to the war." It observed too that the war and social security have resulted in two schools of thought, opposed to each other, being prevalent at the present time. One tends to favour a still greater centralization at Ottawa while the other favours concurrent legislation, in order to conserve the autonomy of the provinces, which would at the same time assure the success of the war effort and the application of a national plan of social security. The C.C.C.L. agrees with the latter stand because it is of the opinion that it is the only way in which the existence of the Canadian Confederation can be protected."

In a general preface the C.C.C.L. considered that the various wartime measures, regarding wages, price controls, industrial relations, national selective service and the present system of taxation, do not give satisfaction to the workmen. Labour feels that they are caught between too-low wages and too-high taxes. The taxes, in certain cases, are even higher in Canada than they are in England. And the higher cost of living index has not brought to thousands of workers proportionate readjustments in wages.

Wartime Wage Control

That section of the Confederation's observations on wartime wage control was, in part, as follows:

The C.C.C.L. notes that P.C. 9384 "freezes" basic wages more than ever. The rectification of injustices and inequalities is provided for, but they can only be rectified to the extent that the prices of goods or services will not be affected. The Order even goes so far as to formally permit the War Labour Boards to decrease wages. And yet wages in Canada have never attained such a high level that it immediately became imperative to start thinking of reducing them.

The C.C.C.L. is of the opinion that the problem of wages should be linked to the price stabilization plan so that, in cases of injustices and inequalities, the corrections can be made in both domains at the same time. And, in this connection, there should be close co-operation between the National War Labour Board and

the Wartime Prices and Trade Board. In addition, the Order, we believe, should not open the door to reduction in wages.

It is likewise quite in order to draw the attention of the Federal authorities to the fact that the decision to include the cost-of-living bonus in the basic wages, without any definite plan in the case of piece-work or any other incentive plan, will result in a considerable number of Canadian workers suffering reductions in wages. The C.C.C.L. protests against this way of proceedings.

The C.C.C.L., finally, suggests that the most important decisions of the Regional Boards be published in the LABOUR GAZETTE, as is now done for all important decisions of the National War Labour Board.

Labour Code

The views of the C.C.C.L. on the new Labour Code were expressed as follows:—

We submit that this measure should limit its jurisdiction to the vital industries needs in the country's war effort and should only be adopted after agreement between Ottawa and the provinces. The C.C.C.L., furthermore, suggests that such a Code should clearly consecrate the right of association of all wage-earners affected and should provide the obligation, for employers, to negotiate collective labour agreements with the syndicates sufficiently representative and responsible in the eyes of the law.

("Any labour union," interjected Mr. Picard, "should be a legal entity responsible before the law.")

The Labour Code also should exclude what are commonly called "company unions". Our Confederation also believes that sufficient protection should be granted to minority unions. We also declare ourselves in favour of the compulsory arbitration of industrial disputes and of the appointment of a permanent industrial relations board upon which organized labour would be properly and proportionately represented, as compared with the total membership of the body.

The C.C.C.L., finally, would accept in the Labour Code a provision that strikes would only be legal after all arbitration procedures have been exhausted and after the reports of the interested parties have been transmitted.

National Selective Service

In regard to the administration of National Selective Service, the C.C.C.L. expressed itself as follows:

The application of the National Selective Service regulations have given rise to many complaints among workmen and, to remedy most of the breaches encountered, the Confederation makes the following suggestions:

(1) that all ordinances regarding compulsory labour transfers be repealed because the present situation, to our mind, no longer makes such a procedure necessary;

(2) that more National Selective Service local offices be established in the larger centres in order to make proceedings more expedient and more satisfactory;

(3) that unemployed men and women be not obliged to report themselves on a fixed day each week at the offices of National Selective Service but that, instead, they be advised, whenever necessary, by letter, telegram or telephone;

(4) that every employee be given the right to ask for an enquiry of his particular case even when he has received the regular notice of seven days;

(5) that the present delay of three days, for occasional temporary work, be extended to six days;

(6) that the principal decisions of the boards of referees be published in the LABOUR GAZETTE as well as the main directives given to local officers by the Director of National Selective Service;

(7) that, to facilitate the placement of workers, there be in the most important offices of National Selective Service a liaison officer between the local director and the business agents of the labour unions.

Unemployment Insurance

The C.C.C.L. made the following recommendations on the administration of unemployment insurance:

The Chairman of the Unemployment Insurance Commission recently announced that the cheques issued for the unemployed would be given out through the intermediary of a number of unemployment insurance offices in each province. This is an improvement which will render a valuable service to the working classes and which is much appreciated by the C.C.C.L.

The Confederation suggests that the Unemployment Insurance Act be amended in order to take into account the following points:

(1) a substantial increase in payments for those having dependents;

(2) that payments be made from the first day of unemployment;

(3) that, when each new unemployment insurance book is issued, there be inscribed in it the amount of the contributions paid to date and the number of days for which they were paid;

(4) that female employees retain their right to payment, when they cease working, even to get married, and that this be taken into account, if, later on, they resume work again.

The C.C.C.L. once more insists that the Commission, as such, exercises its functions independently of National Selective Service and that its jurisdiction, as is provided for by law, be re-established. Unemployment insurance and the employment service, at the present time, are no longer under the authority of the Unemployment Insurance Commission, in virtue of Order P.C. 7994, but are under the control of an officer of National Selective Service who is a representative of the employers. The Confederation cannot convince itself that such a situation is necessary for the efficient prosecution of the war. It believes, rather, that what is requested by all labour unions be done and that a proper equilibrium be re-established in the Commission by seeing that it is composed of three members representing the Federal authorities, another the employers and the third the employees.

Our organization, finally, continues to regret that it is not represented either on the Advisory Board of the Unemployment Insurance Commission or on the National Employment Advisory Committee.

Women in Industry

Dealing with the subject of women in industry, the Confederation, commending improvements since last year, suggested that the federal and provincial governments "pay still more attention to this question, first by regulating the incentive systems, then by prohibiting night work for female workers and do this by reducing their working time to three shifts of six hours each, without any decrease in wages, in all industrial establishments where it is possible to do the work in the daytime. The three shifts, for the duration of the war, could work on the following time schedule: first shift from six in the morning until noon, second from noon until six in the evening, and the third and last from six p.m. until midnight."

Family Allowances

In connection with family allowances the Confederation made the following observations:

(1) Our organization always has favoured a social policy based and centred on the family. Any society that has or shows no particular solicitude for the family and the home cannot pretend to be and call itself a Christian and civilized society;

(2) The Confederation favours the institution of family allowances. But it believes that such allowances should constitute a supplement to and over decent wages and not merely to and over low wages. We suggest first of all decent wages sufficient to allow an average family to live decently and then, the institution of family allowances. Those allowances should not be a means to freeze certain wages at a too low level.

(3) If the Federal Government is going to institute a system of family allowances, the C.C.C.L. suggests that the number of children be not limited to five or six, as is being rumoured. It seems to us that the same justice should be granted to the families with more than six children. May we point out, in passing, that only 4·2 per cent of all Canadian families have more than six children and that it would not be fair to make exception with their case and refuse to grant them the same protection than others.

Income Tax

The section of the memorandum dealing with income tax was as follows:

We would suggest that annual income of one thousand dollars ($1,000), or less, for bachelors, and of fifteen hundred dollars ($1,500), or less, for married people, be exempt from income taxes. In all cases of single persons earning up to $2,000 a year, and of married people making up to $2,500 a year, we think that the Department of National Revenue should verify the taxes paid in each case and decide if and what reimbursements, if any, should be made.

The C.C.C.L. likewise thinks that overtime pay and moneys given for holidays with pay should not be subject to income taxes.

Our organization finds that the present income tax forms are far too complicated and suggests that they be simplified considerably so that workers can fill them out easily.

The Confederation, finally, would have no objection if the Government wanted to organize a national lottery to increase its revenues and to compensate for the previously mentioned suggested reductions in taxes.

Minimum Wage Order

Claiming that Minimum Wage Order P.C. 7679, was "being violated by a large number of employers", the Confederation recommended that employers on finishing a contract should obtain a certification from the employees that the legal minimum had been paid and that employers be not paid by the government department concerned until such a certification was filed.

Immigration

Expressing itself as emphatically opposed to immigration, the Confederation declared:—

"Canada, first of all, should be able to enable its population to live suitably and to provide gainful employment for all those wanting to work, before opening the doors to immigrants."

Other Recommendations

Among the other recommendations contained in the memorandum were:

Increasing old age pensions to $30 per month and reducing the eligibility age to 60 years.

According greater representation to bilingual French Canadians in appointments of higher officials to the Department of Labour, and also in the three new government departments.

Appointing a representative of the C.C.C.L. as technical adviser of Canada's official delegate to the forthcoming International Labour Conference.

Favouring of co-operatives and "cites-jardins" in any restoration of part two of housing legislation and "abolition of the 12 per cent tax on building materials in order to render property more accessible to the working man."

Favouring more severity in the application of the various rental ordinances, especially in the section providing that a landlord can evict a tenant in order to sub-divide his lodgings.

Minister of Labour

The Minister of Labour, Hon. Humphrey Mitchell, paid tribute to the Confederation for the manner in which it had measured up to its responsibilities. In particular, the Minister lauded the co-operation given the Department of Labour by Messrs. Charpentier and Picard. After noting several points raised in the memorandum, the Minister promised sincere consideration of all matters contained.

Prime Minister

The Prime Minister, Right Hon. W. L. Mackenzie King endorsed the words of the Minister of Labour on the help that the brief would be to the government and stated that the government intends to review the measures proposed.

In regard to the new wage control order, he said it was prepared at a time of industrial unrest to counteract certain tendencies that were developing. However, he pointed out that the order had been in operation three months and that not a single industry had been adversely affected.

The Prime Minister assured the delegation that "these orders are not passed to make it difficult for labour," and he praised the manner in which labour has accepted the situation "in order to prevent worse conditions arising."

He also was emphatic that there "was no desire to invade provincial jurisdiction" and added: "Let me point out that all are interested in social security measures, and if we have to wait until every province agrees then the Lord help social security in our day and generation."

Railway Transportation Brotherhoods

A MEMORANDUM of proposed legislation was submitted to the Government by the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods on February 23.

The memorandum was signed on behalf of the Brotherhoods by: A. J. Kelly, Chairman of Committee, Brotherhood of Railroad Trainmen; W. H. Phillips, Vice-Chairman of Committee, Order of Railroad Telegraphers; Wm. L. Best, Secretary of Committee, Brotherhood of Locomotive Firemen and Enginemen; H. B. Chase, Brotherhood of Locomotive Engineers; J. L. D. Ives, Order of Railroad Conductors; J. J. O'Grady, Brotherhood of Maintenance-of-Way Employees.

The memorandum contained the following requests and items:—

(1) That the necessary amendments be made in the Railway Act at the appropriate time to insure that the action taken under the War Measures Act making it unnecessary to station a person on the back of the tender when an engine is moving in reverse over level crossings, be continued after peace is declared.

(2) That the annual appropriation to the Railway Grade Crossing Fund be increased to at least one million dollars, with a view to eliminating all level crossings as expeditiously as possible.

(3) That a national transportation policy be adopted at an early date with a view to the more orderly regulation of all forms of transportation and that favourable consideration be given to the Report and recommendations of the Royal Commission on Dominion-Provincial Relations.

(4) That changes be made in the Income Tax Act so that its incidence with respect to certain exemptions be made equitable for railway workers and pensioners.

(5) That a health insurance plan be set up to insure adequate and timely preventive and curative medical, dental and hospital services. While recognizing that constitutional considerations might be involved, it was urged that health insurance was of national importance and merited federal financial assistance and co-operation, even if existing provincial health facilities and services were continued.

It was further requested that existing agreements between the railway brotherhood and medical association, covering medical services and pensions be protected and that "railway employees contributing to such plans be left undisturbed until such time as they, by a class or group, express a desire to be covered by a federal scheme."

(6) That an annual appropriation of at least two million dollars be provided to assist individuals and organizations engaged in scientific research into the causes and remedies for cancer and tuberculosis.

(7) Recognized as of general national concern, we have noted with interest the reference made in the Speech from the Throne that plans for the establishment of a national minimum of social security and human welfare should be advanced as rapidly as possible; that such a national minimum contemplates useful employment for all who are willing to work; standards of nutrition and housing adequate to ensure the health of the whole population; and social insurance against privation resulting from unemployment, from accident, from the death of the bread-winner from ill health and old age. It is further noted that when suitable arrangements are reached with the provinces, the Government will be prepared to recommend measures to provide for Federal assistance in a nation-wide system of health insurance and for a national scheme of

contributory old age pensions on a more generous basis than that at present in operation. Whatever measures are introduced by Parliament covering the broad field of social security and related subjects, it is our desire that we will have an opportunity of reviewing such measures and, if necessary, making such suggestions as may seem appropriate regarding them.

With respect to health insurance and contributory pensions, we desire the Government to note particularly that for many years, certain classes or groups of railway employees in various parts of Canada have enjoyed the privileges resulting from their own efforts and contributions made to different so-called "Medical Associations", and that contributory pension plans, established by negotiations and mutual agreements with the major and some of the smaller railways, have been in effect for many years. We respectfully request that these existing agreements covering medical services and pensions be protected and the railway employees contributing to such plans be left undisturbed until such time as they, by a class or group, express a desire to be covered by a Federal scheme.

The delegation made reference to proposals made to the Government in 1943 with respect to post-war works projects and noted that some of those concrete proposals had been incorporated in the memorandum submitted to the House of Commons by the Special Committee on Reconstruction and Re-establishment. A pledge was given of continued co-operation in this important task.

New Brunswick Federation of Labour

In presenting their proposals for legislation to the provincial Government on February 16, the New Brunswick Federation of Labour emphasized that while wartime needs must be given first place, they considered that certain legislative changes could be made without undue interference with the efficient prosecution of the war.

The amendments suggested in the Workmen's Compensation Act were drawn up by a committee of the Federation and the New Brunswick Accident Prevention Association. It is urged that the maximum amount of wages on which a workman's compensation is based should be raised from $1,500 to $2,000 per year; that the percentage of earnings paid as compensation should be increased from 60 per cent to 66⅔ per cent, but for permanent total disability should be 100 per cent, though in such cases it should not exceed 66⅔ per cent of $2,000 per year; widows' pensions should be increased from $30 to $40 per month, and an additional sum up to $125 provided for burial expenses when it is necessary to transport the body a considerable distance for burial. Artificial members and apparatus, supplied as a result of an injury, should be kept in repair by the Board when they deem it necessary.

The Federation expresses disapproval of certain amendments made in the Factory Act, 1937, before that Act was proclaimed in effect in 1943. These changes include lowering the minimum employment age from 15 to 14, and permitting employment of children even younger "upon written authorization of the Minister." It was urged that a normal workday of eight hours be established, with time and a half for hours beyond eight, and that the limits on overtime of women and boys under 18 in the 1937 Act, namely 12 hours a day and 68 a week on 36 days a year, be restored.

The Federation believes that an amendment should be made in the Labour and Industrial Relations Act to the effect that employers "shall recognize and bargain collectively with the members of a trade union representing the majority choice of the employees"; and that the provision preventing employees of the Crown from coming under the Act should be eliminated. Similarly, the Federation objects to work done by or for the Government or any municipalities being excluded from the Industrial Standards Act.

The enactment of an apprenticeship Act is again urged. It is considered that such a statute would be valuable after the war when the hurriedly trained tradesmen of the war-period have to compete with fully trained men.

Other requests include more definite provision for grading stationary engineers' licences, scaffolding inspection, election of school trustees, a low cost housing program, remuneration for witness and jury service, and bringing the Electrical Energy Act into force.

Provincial Executive of the Trades and Labour Congress in Nova Scotia

The Provincial Executive of the Trades and Labour Congress joined with the Halifax and Liverpool District Trades and Labour Councils to present their annual suggestions for legislation to the Nova Scotia Government.

Proposals for amending the Workmen's Compensation Act included the furnishing of full medical aid during the entire period of disability; the raising of the weekly minimum benefit paid to an injured workman from $8 to $12; and the basing of compensation on weekly earnings at the time of the accident, instead of on average weekly earnings for the preceding twelve months. It was suggested that to the occupational diseases schedule be added injurious effects or disability resulting from the handling of soda ash, china clay, potash, concentrates, breytes, grain, chrome salt, green hides, wool and cargoes of a similar nature.

A forty-cent minimum wage was urged for the lumber, fish, fruit and processing industries. The appointment of inspectors to enforce minimum rates for women was also requested.

The Industrial Standards Act should be applied to all industry instead of restricted to construction valued at $25 or more in Halifax and Dartmouth.

Proposed amendments to other Acts include fixing a maximum of 21 years of age for any person beginning an apprenticeship under the Apprenticeship Act, the restriction not to apply to men from the Armed Forces; extending the Labour Act; bringing the Limitation of Hours of Work Act into effect as soon as the war is over; extending the Mothers' Allowance Act to include a widow with only one child. It was also requested that the Government enact legislation providing for the inspection and grading of fish.

In conclusion, the government was urged to co-operate with the Federal Government to have the British North America Act amended so that federal social security legislation can be enacted.

Alberta Federation of Labour

The Executive Committee of the Alberta Federation of Labour, representing the Trades and Labour Congress of Canada and affiliated national and international unions, presented its annual memorandum of proposed legislation to the Alberta Government on March 8.

Workmen's Compensation

The Federation, while expressing appreciation of the changes made in the Workmen's Compensation Act, requested that compensation in disability cases be raised to 100 per cent of earnings, that compensation be paid from the date of the accident, that the limit of $2,000 on earnings taken into account in computing compensation be removed, and that all occupational diseases be covered by the Act. The Federation urged also the appointment of additional inspectors, capable of instructing employers and employees in up-to-date safety methods, each inspector being assigned to a district and charged with seeing that safety regulations are enforced and proper first-aid kits maintained. It was recommended, too, that qualified first-aid men should be employed on all construction, maintenance and operational work. Compensation for firefighters suffering from heart ailments or pneumonia occurring during a period of actual service, was also requested.

Collective Bargaining—Union Recognition

The Government was asked to give favourable consideration to a draft Bill dealing with collective bargaining and union recognition which had been prepared by the Trades and Labour Congress. Amendments in the Industrial Conciliation and Arbitration Act to provide for a check-off for union dues was also requested. Complaining that the Societies Act had been used "to charter dual organizations to divide the real trade union movement", the Federation asked that the Act be amended to prevent its use for such a purpose.

Wages and Hours of Labour

The Federation advocated an upward revision of minimum wage rates and a study of the wages and working conditions of domestic servants, particularly those working in cities. An amendment in the Masters and Servants Act was also suggested to require notice of dismissal to be based on the conditions of employment, i.e., one week for workers employed by the week and one month for those employed by the month. Prohibition of Sunday work in bakeshops was also urged.

Other Requests

Other requests included: Extension of the eight-hour day, now in effect in some hospitals, to all hospitals in the province; increase in the old age pension, with lowering of the pensionable age to 60 years or less and abolition of the means test; and a housing scheme to provide adequate housing and employment for the post-war period.

War Emergency Training

Summary of Program—Progress of Enrolment—Industrial Training—Apprenticeship—Rehabilitation Training

THE War Emergency Training Program provides the following types of training:—

(1) Pre-employment classes in vocational schools for men and women about to enter war industry;

(2) Part-time classes, principally for the upgrading of persons already employed;

(3) Training in plant schools;

(4) Special classes for foremen and supervisors;

(5) Training of enlisted men as tradesmen for the Army, Navy and R.C.A.F.;

(6) Rehabilitation training for persons discharged from the Armed Forces in the present war and referred for training by the Department of Pensions and National Health;

(7) Assistance to certain categories of university students whose services are needed in connection with the war effort.

War Emergency Training is carried on under agreements made by the Dominion Government with each province. The administration is decentralized with a Regional Director in each province. Training is given in technical schools, special training centres and in industrial plants. The provinces and municipalities supply the shop facilities of the technical schools to the Program free of charge. Provincial Governments also pay certain administrative costs and share with the Dominion in the cost of machinery and equipment purchased. All other costs are paid by the Dominion with funds from the War Appropriation.

Progress of Enrolment

From the beginning of the program up to January 31, 1944, the gross enrolment in all types of projects has been as follows:—

Training in industry	204,376
Army	38,806
Navy	7,143
R.C.A.F.	61,968
Rehabilitation (discharged persons from the forces)	2,562
Students	5,189
	320,044

Industrial Training

The enrolment in the full-time pre-employment classes, part-time classes and plant schools showed very little change during the month of January and it is anticipated that these features of the program will continue to diminish in their extent. Four new plant schools have been approved since January 1, all in the Province of Quebec. Since the outset of the program, 121 plant schools have been approved, 46 of which are still active; others have met their requirements and suspended operations.

The enrolment in the various units of Foremanship Training continues to show a substantial increase. The second series of Job Relations Training has been exceptionally well received across the country and an institute was put on in Calgary the beginning of February to train leaders in this series for the four western provinces. The whole plan of supervisory training has been taken up by the Civil Service Commission with particular reference to Job Instructor Training and Job Relations Training, Series 2, and sessions have been held for many of the Dominion Government Departments.

Apprenticeship

On January 21, P.C. 8993 made provision for the first time for Dominion financial assistance to the provinces in the matter of training apprentices (L.G., Feb., 1944, p. 206). The appropriation for this purpose for the fiscal year 1944-45 has been set at $250,000 and the provinces have been invited to enter into agreements for a period not to exceed ten years. It is hoped in this way to encourage the passing of apprenticeship legislation in those provinces where such is not already in existence and to increase the coverage in apprenticeable occupations in the other provinces where apprenticeship acts are already on the statute books.

Rehabilitation Training

During the month of January the enrolment of discharged members of the forces in rehabilitation training increased nearly 40 per cent but the gross total is still comparatively small, 634 on January 31. Of this number less than 10 per cent were being trained on the job in industry. Others were being trained in private trade and commercial schools but the great majority were enrolled in the Government training centres.

(1) Includes those graduates who, though actually placed prior to January 31, 1944, were not so reported until after January 1, 1944.

Activities of the Unemployment Insurance Commission

Increase in Claims for Benefit—Summary of Applications Since February, 1942—Rehabilitation of the Physically Handicapped

URING January 1944, 11,751 claims for Unemployment Insurance benefit were received in the local offices of the Unemployment Insurance Commission. This represents an increase of 5,189 claims over the 6,562 registered in December 1943. During January of last year 4,637 claims were filed in the local offices. Compared with last January, the number of claims has increased in all provinces, but Ontario and Quebec have experienced the greatest relative increases. The increase in claims during January over December, when 6,562 were filed, is also striking, the highest proportional increases occurring in the western provinces of Manitoba, Saskatchewan, Alberta and British Columbia.

The number of persons who signed the live unemployment register in the last week of January was 12,439 compared with 6,216 in the last week of December. Persons sign the live register in a local office each week when they report, respecting their unemployed days during the preceding week. Thus, as happened in January, the number signing the live register in a week may be greater than the number of claims received within the month, since those who claimed in a previous month and are still receiving benefit sign the register each week.

Persons Receiving Benefit

During January, 4,570 persons received a total of $131,037 for 69,637 unemployed days compared with 2,226 persons who were paid $52,600 for 29,160 days during December and 2,381 persons who received $70,650 for 37,663 days in January 1943. In the present month, therefore, the average duration of the unemployment compensated was 15·2 days as against 13·1 days in December and 15·8 days in January last year. The average amount paid per beneficiary was $28.67 in January compared with $23.63 in December and $29.67 last January and the average amount paid per compensated day of unemployment was $1.88 in January, $1.80 in December and $1.88 in January 1943.

Tables 2 to 5 present data respecting the number of claims forwarded to insurance offices and their disposition, reasons for non-allowance of claims, persons receiving benefit, benefit days paid and amount of benefit paid.

Tables 8 and 9 present a breakdown of claims according to the occupations and ages of claimants.

Application for Unemployment Insurance Benefit, February, 1942, to December, 1943

From February, 1942, when the payment of unemployment insurance benefit in Canada was commenced, until the end of 1943, 63,584 applications for benefit were made by unemployed workers.

Claims for benefit are filed by applicants at local offices of the Unemployment Insurance Commission. The local office verifies the reasons for separation from employment, and notes details of the contributions recorded in the current insurance book.

Claims are then referred to Insurance Offices for adjudication. Of the total claims received at local offices from the commencement, 58,106 were referred to the Insurance Offices. Of these, 44,179 were allowed and 11,490 disallowed, while at the end of December 2,437 claims were still pending.

An Insurance Officer may allow any claim for benefit and there is no appeal from his decision to allow a claim. If the Insurance Officer does not consider that he can allow a claim, he advises the applicant of the reason the claim is not allowable.

There are a number of reasons under the Act why claims for benefit may be disallowed. The most common reason for disallowance involving approximately half the rejected claims so far, has been in the case of workers who voluntarily left their employment without just cause, and thus disqualified themselves for benefit. Another one-third of the disallowed applications have resulted from workers either not having made sufficient contributions under the Act or not having been in insurable employment. About one thousand claims have been rejected due to the claimant having been discharged for misconduct. Other reasons are listed in Table 4.

Every claimant has the privilege of appealing against the decision of the Insurance Officer regarding his claim to the Court of Referees, where there is an equal representation of employers and employees. Of the 11,490 claims disallowed, 1,364 applicants whose cases were heard took advantage of this privilege.

The Insurance Officers' adjudications were upheld in 928 cases and 184 appeals were allowed. In the majority of the allowed cases either new information was to hand or medical

certificates were forwarded which contributed conclusive evidence for allowance. In 152 cases, the Insurance Officers referred cases directly to the Courts of Referees for decision and of these, 114 cases were allowed and 38 disallowed.

Appeals of 138 claimants were withdrawn from the Courts and there were 54 cases which awaited hearing.

There have been 8 appeals to the Umpire, of which 2 have been allowed and 6 disallowed.

Inter-State Claims

Since April 12, 1942, 5 claims have been filed in Canada by United States citizens resident in Canada and 12 claims were filed by Canadian claimants who were resident in the United States. $169.59 was paid to the Canadian claimants resident in the United States and 20 benefit cheques were issued.

Benefits for Discharged Members of the Forces

Under the Post Discharge Re-establishment Order, the Dominion Government makes employer and employee contributions to the unemployment insurance fund on behalf of former members of the armed forces who have been in insurable employment for 15 weeks in any 12-month period following their discharge. Such contributions cover the period of military service subsequent to July 1, 1941, the date on which contributions under the Unemployment Insurance Act were first made by civilians.

Contributions so far made by the Dominion Government in respect of services in the armed forces now total $53,983.30. (*See* Table 6.)

Unemployment insurance contributions made by the Government are in addition to other benefits and grants payable to discharged members of the forces (male and female) under the Post Discharge Re-establishment Order (L.G., May, 1943, p. 587).

A recent amendment to the Order concerns the relationship between unemployment insurance benefit and out-of-work benefit payable to discharged service personnel and is described elsewhere in this issue (p. 404).

Placement of the Physically Handicapped

That the public are interested in the employment possibilities of physically handicapped workers was demonstrated at a series of public meetings held recently in Quebec and the Maritimes, and addressed by Mr. Louis J. Trottier, Chief Commissioner and Mr. R. J. Tallon, Commissioner of the Unemployment Insurance Commission; and Mr. H. C. Hudson, Supervisor of Special Placements, Employment Service Division, Ottawa. Well-attended meetings were held at Quebec City, Moncton, Saint John, and Halifax. These meetings complete a series of conferences held in fourteen centres across Canada for the purpose of focussing public attention on the employment of physically handicapped persons. A feature of all meetings has been the active discussion period following the addresses.

The subject of Mr. Trottier's address was, "National Planning for the Physically Handicapped". Mr. Trottier asserted that it is a national duty to see that persons who have suffered disablement have an opportunity to live as full and useful lives as possible. The restoration of disabled persons to productive employment will be an economic advantage to the nation; and the aim is not to place a disabled person into any work but into the most skilled work of which he is capable. Mr. Trottier also stated that no matter how handicapped or disabled people are, it must be remembered that they are still integral to the life of the community, and the social order will suffer if they are allowed to fail in their effort to live a full and useful life. He stated, also, that restrictions placed on the employment of the handicapped which are not justifiable on a functional, environmental, or industrial risk basis, are entirely artificial; and it should be remembered that in each case the significant factor is that the handicapped person is like his fellows in more ways than he is different. Mr. Trottier went on to declare that a plan must be worked out to facilitate the finding of employment suited to all those who are handicapped, especially disabled war veterans. We must have a co-ordinated program of employment, and must contact employers to influence them towards providing jobs for handicapped persons. Some employers who had never thought of employing handicapped workers, once persuaded to do so have declared themselves more than satisfied with their work.

Mr. Tallon pointed out that war leads to increased physical disability, but that Canadians can be assured that plans for the disabled veterans of the present war, and designed to effect their rehabilitation were commenced four months after Canada entered the war. The government has already made provision for the treatment, training, and necessary financial assistance to all persons on their discharge from the armed forces. Although as yet, notwithstanding the wonderful work done by the various welfare organizations there was no plan for the complete vocational rehabilitation of handicapped persons, such a plan is now being evolved by the employment service of the Unemployment Insurance Commission.

In the course of his address, Mr. Hudson pointed out that it is easier to compile a list of occupations which handicapped persons cannot fill than it is to make a list of all the jobs they can do. Once placed in suitable employment, the physically handicapped person is not vocationally handicapped. Every conceivable type of handicapped person has made a direct contribution to the war effort. The war has given these folk an opportunity to show what they can do. In the work of special placements, emphasis will be placed on a man's abilities rather than on his disabilities. Dependence will not be placed on the sympathy of an employer as a factor in the employment of the handicapped; but rather on the ability of the employee to do a good all-round job. Very shortly, five supervisors of special placements will be appointed,—one for each of the five regions of the Unemployment Insurance Commission.

Next, special placements sections will be organized in the seventeen largest employment and selective service offices across Canada. These will serve as a focus for all agencies working in the interests of the physically handicapped, and will co-ordinate all their efforts to place handicapped persons in remunerative employment.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission showed that at March 1, 1944, 137,449 employers with insured employees were registered, and 3,146,067 employees were issued with insurance books.

Registration according to Regions and for Canada as a whole are shown in the following Table:—

Workmen's Compensation in Quebec During 1942

THE fifteenth annual report of the Workmen's Compensation Commission reveals a considerable increase in the number of industrial accidents, a total of 96,888 being reported during 1942 as compared with 82,568 in 1941, and 65,704 in 1940.

"Since the commencement of the war, and particularly since the month of June, 1940", the Commission's report states, "industrial effort in Canada has increased tremendously and the number of accidents reported has shown a corresponding increase. . . . The total of our expenses of administration has been necessarily increased to deal with the large number of claims reported for consideration."

A number of industrial diseases have been added to Schedule 3 of the Act in order that further protection may be given to workmen engaged in war industries and who are exposed to special hazards in the manufacture of explosives or otherwise.

According to the report, the amount paid out in compensation during 1942 was $4,828,348.70 (provisional figure). This compares with a total of $6,125,241.55 in 1941. The largest item on the 1942 expenditure list was for temporary incapacity, $2,015,232.52. The other items were $1,040,411.54 for medical aid; $938,519.84 for permanent incapacity, and $834,184.80 for death. A reserve was set up for outstanding adjustments amounting to $4,052,737.43.

Administration expenses during the year under review amounted to $591,846.31 ($491,603.91 under Schedule 1; $100,242.70 under Schedule 2), of which $423,515.71 was paid out in salaries of Commissioners and staff. Revenues for the period totalled $9,345,662.25, and was made up of assessments, transfers from disaster fund, interest, penalties and sundry items. An accumulated surplus of $2,080,550.93 is reported as at December 31, 1942.

Employment and Unemployment

Summary

INFORMATION in this section regarding the employment situation in Canada is based upon reports from the following sources:—

The employment situation at the beginning of January, as reported by employers.—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the trend of employment over a period of years.

Returns received from 14,251 co-operating establishments indicated a pronounced decrease in employment and payrolls. At the beginning of January their staffs aggregated 1,868,615 persons, compared with 1,916,728 reported on December 1.

The index number of employment (based on the 1926 average as 100) was 185·7 as compared with 190·5 in the preceding month, and was 2·0 per cent higher than at January 1, 1944.

Information is also embodied in this article concerning payrolls, which is furnished each month by the co-operating firms. The per capita average weekly wage of $29.67 showed a decrease of $1.94 from that of $31.61 at the beginning of December, while at January 1, 1943, the figure was $27.92.

Report on employment conditions for February.—A summary of employment conditions for the month of February has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service Offices across Canada. These reports describe employment conditions in the Maritime, Quebec, Ontario, Prairie and Pacific Regions.

Applications for employment; vacancies, and placements, January, 1944.—From the Employment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

Reports received from the Employment and Selective Service Offices of the Unemployment Insurance Commission during the five-week period, December 31, 1943 to February 3, 1944, showed a fractional gain in the average number of placements recorded daily in comparison with the preceding four weeks and a minor reduction when compared with the first four weeks of 1943. Under the first comparison, the decreases in trade, forestry and lodging and construction were offset by increases in manufacturing, services, public utilities, mining and finance. Compared with the four weeks January 1 to January 28, 1943, except for a fairly substantial advance in forestry and logging and minor additions in trade, mining and agriculture, all groups revealed reductions, the most noteworthy being in construction and manufacturing. Vacancies during the period under review numbered 249,311. There were 245,487 applications for employment, and 160,281 placements were effected in regular and casual employment.

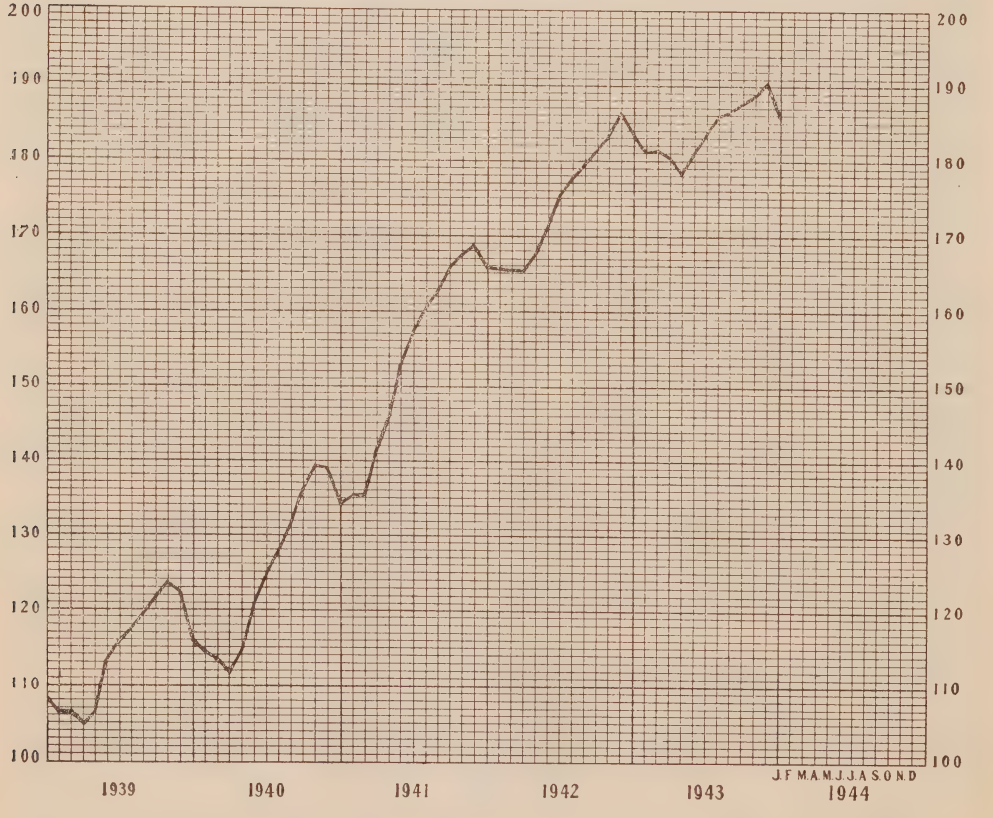
Unemployment in trade unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

The statistical article summing up the information contained in these reports, formerly run monthly in the LABOUR GAZETTE, will in future appear quarterly. The last monthly article was published in the February issue.

Unemployment as reported by the Unemployment Insurance Commission.—In the article *Activities of the Unemployment Insurance Commission* appears each month a statement showing the number of claims made each month for unemployment insurance benefit.

During January, 1944, 11,751 persons made claim for benefit, as compared with 6,562 in December, 1943, and 4,637 in January, 1943.

2821—9½



The Employment Situation at the Beginning of January, 1944, as Reported by Employers

INDUSTRIAL employment showed a pronounced contraction at January 1 in accordance with the movement invariably indicated at the year-end holiday season. The number of workers released was large, exceeding that recorded at the beginning of January in 1943 or 1942; the general decline was nevertheless considerably below average judged by pre-war standards. The 14,251 establishments furnishing information to the Dominion Bureau of Statistics reported a personnel of 1,868,615. As compared with their staff of 1,916,728 at December 1, there was a reduction of 48,113 employees, or 2·5 per cent. The crude index number of employment (1926=100), declined from its all-time high of 190·5 in the last survey, to 185·7 at the date under review, as compared with 183·7 at January 1, 1943. Since the curtailment was less than normal in extent, the seasonally-adjusted index showed a gain, rising from 186·0 at December 1, to 192·9 at the beginning of January.

It will be recalled that Christmas and New Year's Day in 1943 were celebrated on Saturdays, while many establishments also remained closed on Boxing Day, December 27; the observance of these holidays, particularly when they come at the week-end, entails a substantial increase in absenteeism. These occurrences combined with seasonal curtailment of employment in a number of industries, to produce an important decline in the weekly payrolls disbursed on or about January 1, 1944. These aggregated $55,446,212. As compared with $60,596,603 reported at December 1, there was a reduction of 8·5 per cent, approximating that indicated at January 1, 1943, when the year-end losses had also been exaggerated by the observance of

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

the holidays towards the week-end. The per capita weekly earnings fell from $31.61 in the last report, to $29.67 at the beginning of January. The average at the same date of last year had been $27.92, and that at January 1, 1942, $26.13. In the 12 months' comparison, the index of employment at the date under review showed a gain of 1·1 per cent; the accompanying increase in the payrolls was 6·6 per cent.

The gain of 1·1 per cent in the index of employment at January 1, 1944, as compared with a year earlier is noteworthy in that it is the smallest increase reported in any month in a similar comparison for a lengthy period. At January 1, 1943, the increase over January 1, 1942, had amounted to 10·8 per cent, while that at January 1, 1942, over January 1, 1941, was 23½ per cent. The relatively slight advance revealed in the latest index in the 12 months' comparison affords further evidence of the levelling-off process now under way in industrial employment.

Communications, retail trade and logging afforded more employment at January 1, 1944, than at December 1; the improvement in trade was seasonal, while that in the other two groups was contrary to the usual trend at the time of year. The remaining major industrial divisions—manufacturing, mining, transportation, construction and maintenance and services—showed seasonal curtailment, which in the first three industries was below-normal in extent. The largest decline took place in construction, where the reported loss of 28,463 persons, or 17·6 per cent, exceeded the average at January 1 in the period from 1920.

The co-operating manufacturing establishments laid off 23,736 men and women, a reduction of two per cent. This was about twice as large as the decrease indicated at the same date in 1943, but was considerably smaller than the average in the last 23 years. Rubber and tobacco factories afforded more employment, but other divisions showed reduced activity. The greatest contractions in employment were in textile, food, lumber, chemical, pulp and paper, non-ferrous metal and iron and steel plants. The shrinkage in the last-named is the greatest indicated since January 1, 1939. On the whole, the declines in the various industries were less-than-usual for the time of year.

Payrolls

The aggregate payroll of $55,446,212, previously stated as having been disbursed in weekly salaries and wages at January 1 by the 14,251 reporting employers, was lower by 8·5 per cent than the sums paid at the first of December. The decline, which is seasonal, constitutes the fourth interruption in the generally upward movement indicated since the institution of the statistics of payrolls in the spring of 1941; the other occasions on which the trend was downward were at the beginning of January in 1942 and 1943, and at May 1 of last year, largely as a result of the Easter holidays. The weekly per capita average earnings fell from $31.61 at December 1, to $29.67 at the first of January, or by $1.94; the decline of $2.14 indicated at January 1, 1943, had lowered the average to $27.92.

Including the data received from financial institutions, the latest survey shows that the number of persons in recorded employment was 1,933,510, as compared with 1,981,547 at the beginning of December. The amounts received as weekly payrolls by these persons

TABLE II—EMPLOYMENT AND EARNINGS

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

were given as $57,522,777 paid on or about January 1, and $62,636,434 paid on or about December 1. The per capita average for the nine main industries, including finance, was $29.75, as compared with $31.61 at the beginning of December, and $28.01 at January 1, 1943.

Table II summarizes the latest statistics of employment and payrolls for the leading groups, the provinces and economic areas, and the eight leading industrial cities, and gives comparisons as at December 1 and January 1, 1943.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have tries, where rates of pay are above the been converted from their original base, 1926=100, to June 1, 1941, as 100. The report shows that in the period for which data are available, there has been an increase of 21·5 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these persons are higher by 40·4 per cent. Including finance, the gain in employment from June 1, 1941, to January 1, 1944, amounted to 20·9 per cent, and that in payrolls, to 39·5 per cent.

Between January 1, 1943, and January 1, 1944, there has been a slight increase of 1·1 per cent in employment in the eight leading industries, accompanied by that of 6·6 per cent in the weekly payrolls. The explanation previously given for the much greater rise in the latter than in the former may again be stated:—(1) the growing concentration of workers in the heavy manufacturing industries where average, and, in addition, there is a considerable amount of overtime work; (2) the extension of the system of paying a cost-of-living bonus[1] to the majority of workers; the rates at which this allowance has been calculated have been increased on more than one occasion since its institution; (3) the progressive up-grading of employees as they gain experience in their work. In certain cases, higher wage-rates have also been awarded.

For obvious reasons, the growth in employment and payrolls in manufacturing in the period of observation has greatly exceeded that in the non-manufacturing industries; where the index of employment in the former has risen by 34·8 per cent since June 1, 1941, that of payrolls has advanced by 56·5 per cent. The factors given above as influencing the all-industries' trends operate with greater force in the case of the manufacturing group.

[1] The Wartime Wages Control Order, 1943, requires that the existing authorized cost-of-living allowances be absorbed in the existing authorized basic wage rates; the adjustment in the rates of pay are required from the first payroll period commencing on or after February 15, 1944.

Relative weight of employment by Provinces and Economic areas as at Jan. 1, 1944.	100·0	7·9	·1	4·4	3·1	31·7	40·4	10·8	5·0	2·0	3·8	9·5

Note.—The "Relative weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns at the date under review.

Even more noteworthy than the expansion in the number of workers and the payrolls in manufacturing as a whole in recent months, is that which has taken place in plants producing durable goods, in which the index of employment has risen by 57·1 per cent, and that of payrolls by 82·3 per cent from June 1, 1941, to January 1, 1944. Despite considerable curtailment in the non-durable goods division as a result of shortages of labour and materials, the index number of employment in this group was 14·5 per cent above that indicated at June 1, 1941, while the increase in the payrolls amounted to 29·6 per cent.

In regard to the marked variations shown in the average earnings of workers in the different industrial classes, it must be borne

[1]The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

in mind that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in different industries is obviously an extremely important factor.

Report on Employment Conditions for February, 1944

The following summary of employment conditions for the month of February has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service offices across Canada.

UNEMPLOYMENT in the construction industry is still of some proportions, and other lay-offs are also occurring, but with the advent of Spring, the immediate situation has to do with plans for the replacement of the thousands of agricultural workers, presently occupied in war and other essential industries, who will be returning to the land after the end of March. Practically every other Canadian industry—logging, mining, manufacturing, even certain construction projects—will be affected by this switch-over.

Maritime Region

Agriculture.—Migration of the farmers from their seasonal employment back to the farm has not as yet reached any proportions in the region and the only sign of coming agricultural activity is to be found in inquiries now being made as to the prospects of securing help for Spring work.

Logging.—On the whole the demands of the logging industry are being well met. Snowfalls have facilitated the task of getting the logs out of the bush, and while there are still labour shortages here and there, these are by no means serious. In the New Glasgow area the lumbering contractors are continuingly on the lookout for men, and report fair success in obtaining them. At Truro several operators are still insufficiently supplied, and a number of woodsmen are being transferred from Prince Edward Island to relieve the situation. In the Halifax district quite a few vacancies for choppers are listed, mostly in pulpwood operations, and there are still calls for fuelwood cutters, who are not available locally.

In the New Brunswick area, Campbellton reports that lumbering operations are well under way, with no shortage of men as yet. Pulpwood cutting is continuing, and no let-up is expected before the end of March. Fredericton is still in need of many woods workers, although the demand is lessening daily, and labour demands in the Saint John district are also decreasing but Moncton registers a steady demand for experienced woodsmen, who are not available.

Mining.—The coal mines of the maritime region are operating to capacity, although there is a continuing shortage of certified miners, and the return of soldier miners, still continuing, is not adequate to fill the current demand. At Inverness, men idle during the installation of new machinery at one mine are back at work, and another, also held up by a breakdown, is working again at practically normal production level. In the New Glasgow area practically all miners are working on full time schedule.

Manufacturing.—As the season advances greater activity is manifested in the manufacturing industry and the demand for labour has materially increased.

Labour turnover in the shipbuilding yards at Hebbville and Mahone Bay is on the increase. The Halifax Shipyards have followed up their advertising campaign for all types of skilled, semi-skilled and unskilled labour by obtaining permission for a canvass by their own representatives through Ontario and Quebec, as well as in their own region. Quite a few applications have been received, and a few skilled workers have been sent on their way to the yards by the representatives. The similar needs of H.M.C. Dockyard cannot be supplied locally and no assistance has as yet been procured from outside points.

In the Amherst district the aircraft industry is calling for lathe hands, toolroom bench workers and clerical staff, and in the Truro area a large number of female workers is required for the textile factories. To meet the latter need, arrangements are being made to transfer a number of girls from the Cape Breton area, where they have been engaged in munitions work. At Saint John the labour situation has improved during the period, and the few demands are being filled locally for the most part. Fertilizer plants of the city report that they are running nearer to peak production than at any time during the last two years.

Construction.—The seasonal lull in construction continues throughout the maritime provinces, but there is indication that new projects will shortly be getting under way. At Halifax expansion of the work on an army ordnance depot at Willow Park will start in about a month's time, unless adverse weather conditions prevent. It is probable that remodelling by National Defence will begin in April on Camp Sussex—orders for painters for this work have already been placed. At Fredericton, also it is expected that two new projects will be started shortly, with a resultingly greater shortage of carpenters.

Quebec Region

Agriculture.—As the season advances, some requests for agricultural helpers are being filed in the region, but for the most part farmers are still busied with chopping and selling surplus fuelwood, harvesting ice and preparing for the coming maple sugar season. In Dorchester County, a request has been made for 500 workers to go to Maine for the sugaring season commencing March 15.

Logging.—Some movement of farmers back to the land is noted as cutting in the logging camps declines. The closing down of camps has resulted in the falling off of demand for bushmen in the Campbell's Bay area—about 103 men have been laid off during the past few weeks, and a heavy dispersal of workers is anticipated in the next couple of weeks. In the Port Alfred district some orders have been cancelled, as in the majority of cases there is to be no Spring cut. Chicoutimi reports some 3,000 pulpwood cutters in the bush in that neighbourhood. While woods operations will continue throughout the Spring and Summer, it is expected that a fair number of these workers will be leaving the camps at the beginning of March. At Levis, some 497 wood-cutters have been directed to the bush during the period and at Val d'Or approximately 300 men are required to bring pulpwood cutting operations up to strength.

Mining.—In the southern section of the province the mining industry is quiet, except for plans going forward for the replacement of farmers on seasonal permits at Asbestos, and the probable closing down of the chrome operations at Thetford Mines. Campbell's Bay has not yet procured its quota of underground helpers, miners and machinists for the lead and zinc mines of the area, but hopes to fill this demand locally.

Farther north, Rouyn's base metal miners are still short of experienced miners and the gold mines also need experienced underground workers. At Val d'Or, while no vacancies are reported from the base metal mines, about half of the special quota for the gold mines remains to be filled.

Manufacturing.—Labour shortages in manufacturing eased considerably during the period, as reductions in production continued. There is a considerable number of unemployed at Quebec, Three Rivers, Shawinigan Falls and Valleyfield, and efforts are being made to transfer these workers to other centres. Clearance orders have met with indifferent success to date, as many of the workers do not wish to leave their permanent place of residence.

In the Montreal area, there are still a number of lay-offs taking place. The transfer of workers, both men and women, laid off by the war plants, is rendered continuingly difficult by the lower range of wages offered for the employment available, and in addition, many civilian industries which would be willing to expand and absorb workers cannot obtain the necessary material and machinery. However, the aircraft industry continues to offer one encouraging labour outlet—two large plants are hiring on a substantial scale.

In the shipbuilding yards at Levis 200 men, mostly unskilled, are still required. There is also a continuing demand for electricians, plumbers, tinsmiths, etc., though the lack of adequate housing is a complicating factor.

In Quebec and St. Hyacinthe the shoe manufacturing industry is active, and the textile trade continues to absorb many of the women workers released from other industries. While there is a drop in Montreal's requirements in this field, consequent upon the easier labour situation, labour is urgently requested at various other manufacturing centres of the region. The tobacco factories, too, are exigent in their demands. Granby still has need of some 50 girls, but the worst shortage in this industry is recorded in Montreal.

Construction.—The Winter slump in construction continues throughout the region, and few new projects are in view as yet.

Ontario Region

Agriculture.—As Spring approaches, an increasing number of farmers are leaving their temporary industrial employment and returning to their farms to prepare for agricultural activity ahead. In spite of the large number of returning farm workers, orders for agricultural help are mounting steadily throughout the region. In the St. Catharines area many orders are now on hand for labour on stock, mixed and fruit farms, with very few applicants for the vacancies as yet. At London, the NSS will have an office at the Middlesex County Seed Fair in March, to accept orders for farm help, and at Woodstock quite a

number of agricultural workers on temporary permits have been granted separation from essential industry in order to return to the land. The maple sugar season is likely to be early, and this is an added cause for securing helpers as soon as possible.

Logging.—The logging industry remains somewhat seriously handicapped by lack of labour. In many districts saw-log operators have been particularly hard hit by the abnormal weather conditions of December and January, and a heavy fall of snow would be of great benefit for the forthcoming sleigh haul. Arnprior and Peterborough are among the districts reporting a continuingly heavy demand for workers and a corresponding shortage of suitable labour.

In the Timmins area saw-log operators are calling urgently for teamsters and loaders. As a sequel to the earlier soft weather they have been forced to put on night shifts in order to get logs out of the bush—and weather conditions in the Kapuskasing district are now ideal for logging and pulpwood operations. Spruce Falls reports that the German prisoners are producing well, and the same is true of the Japanese aliens, of whom more are desired. One company still requires 400 pulp cutters and other contractors and operators in the area report similar shortages of cutters, but other labour supply is sufficient.

Mining.—In the mining field, the earlier flow of labour from points outside the district on clearance as beginners for the base metal mines has slowed down appreciably, and 600 workers are still needed. Timmins has slight improvement to record in its efforts to secure workers for the gold mines. N.S.S. officers report that it is very difficult to find men with the specified qualifications either for this work, or for the nickel plant at Sudbury.

Manufacturing.—Local offices report that the activities of the Industrial Mobilization Survey and the prospect of losing thousands of farmers are creating a demand for labour in the manufacturing industry of the region. The majority of men available to replace those who will shortly be leaving essential industry lack the required skill and physical ability. The most drastic scarcity is continuingly in the ranks of common labour, and there is an insistent, widespread demand for foundry labourers, as many of these can only carry on temporarily.

In the Toronto area, practically no lay-offs have taken place in war plants during recent weeks, and any employees laid off are quickly transferred to other work. Toolmakers and machinists are constantly in demand, and a steadily increasing call is noted for lathe hands, and boring and milling machine men. Some war plants will take almost any kind of men to train as machine operators, since skill and physique are lacking. One plant, indeed, is experimenting with sixteen and seventeen year old youths as inspectors.

Oshawa's shortage of common labour ranks among the highest of the region, and similar conditions, in lesser degree, obtain in other large industrial centres such as St. Catharines and Guelph, London, Niagara Falls and Kingston, Brantford, Hamilton and New Toronto. In these places additional workers will have to be found to replace those returning to agriculture.

At Collingwood, work on the tankers on the ways proceeds apace. Ice cutting around the Steamer Riverton is about to begin, in order that it may be moved into dry dock for repairs estimated at $250,000. Other ship repairs, too, are going forward prior to the opening of navigation, and all available men are being pressed into service.

In spite of advertising, radio and the checking of every possible source of woman power, Toronto still lacks some 5,000 women workers, who are needed not only in war plants but also in packing plants and textile factories. The Department of Munitions and Supply is pressing for a greater supply of such female labour, and other industrial centres reflect the shortage in a lesser degree. While the trend of female employment in Hamilton has been steadily down over the past ten months, that city shares in the current demand for women workers in primary textile mills and hosiery plants. Kitchener-Waterloo and London, Trenton, Paris and Prescott are exigent in their call for female labour, but the nature of the work offered, combined with not especially tempting wage scales, seems to be a handicap to the filling of these requirements.

There have, of course, been lay-offs in the region during the month and others are anticipated,—but the workers so far released have been readily absorbed into other "A" and "B" priority industries, or referred (if on postponement) to the Industrial Mobilization Division.

Construction.—Activity in construction remains at low ebb in Ontario, and is even at a complete standstill in some areas. Two projects of some proportions are the only recent developments in the industry. Machinery is being shipped into Kapuskasing in preparation for a major airport undertaking, and construction labour will shortly be required for this work. At Orillia, work has begun on the new wing of the Ontario Hospital and for this project some 50 carpenters and 100 labourers will be required presently.

Prairie Region

Agriculture.—The short-time work in the coal mines of Saskatchewan and Alberta has resulted in quite a migration of agricultural workers back to the farm. Many are also returning from essential industry, and hundreds of others will follow before the end of March. There is a considerable demand for married couples and choremen for the coming season, with good wages as an inducement to applicants.

Logging.—The logging problems of the Lakehead area have not been greatly alleviated during the period. Total requirements in bushmen and pulpwood cutters in this district approximate 4,000, and labour is in continued demand. Several hundred more loggers are wanted in the Fort Frances-Kenora section, where the output is definitely curtailed by lack of labour. Northern Manitoba still registers a great demand, as many bush workers have returned to their farms, but northern Saskatchewan's demand has been fairly well taken care of. Greater activity has increased the demand for bushmen in some sections of Alberta and it is difficult to secure suitable workers. Total requirements still amount to several hundred bushmen.

Mining.—The situation in the coal mines of the region has failed to improve. With the sole exception of Blairmore, (where all mines are operating full time, with no indication of slack due to lack of orders) and two large mines at Red Deer, the mines are suffering from the unseasonably mild Winter. In the Drumheller area, where all mines are operating only from one to four days a week, as many men as can be spared are being sent to other places where they are more urgently required.

Colder weather has made no change in mine labour conditions in the Edmonton neighbourhood,—all the local mines are working part time, and claims for part-time benefits have arisen over 200. Edson reports that one mine is closed altogether, and another working three days a week. Conversely, Estevan reports that its mines are over-staffed and able to produce much more coal than presently required.

The labour shortage in the base metal mines continues. Flin Flon is calling for labourers for surface and plant work, underground miners and miners' helpers for the local mines, and Fort Frances requires workers of all sorts for the Steep Rock Iron Mines. Port Arthur reports an improved situation, but production in the area still lags as a result of the inexperience and calibre of new employees, and some 123 men are still in demand. At Kenora the call for gold mine workers is pressing.

Manufacturing.—The greatest problem faced by the manufacturing industry in the Prairie region concerns the replacements to be made when agricultural workers will shortly be withdrawn from the packing plants and flour mills. Several hundred farmers were recruited last Fall to bring these industries up to strength, and their imminent departure renews the question of adequate help. Brandon, Edmonton and Moose Jaw are affected by this situation, and some firms affected have begun a campaign to induce new workers to accept jobs on a year-round basis.

At Fort William, some progress has been made in filling the labour needs of the local aircraft plant—roughly 600 workers are still needed to bring production to full capacity. It is anticipated that a large number of experienced workers may be obtained from Edmonton, where an aircraft plant lay-off has released some 400 workers.

Port Arthur, too, is having some success in reducing its manpower requirements, though skilled mechanics are still urgently needed at the Port Arthur shipyard, marine pipefitters especially. Tooling up has commenced in the aircraft plant of the shipyard, and production is now under way with a full complement of workers.

Construction.—As there is no construction activity of any magnitude throughout the region, a large number of carpenters, bricklayers, painters, etc., have been unemployed for some time. Most of the carpenters have been released from the local airport at The Pas, with only a skeleton crew retained for the repair and maintenance of machines and buildings, and at Port Arthur some 25 carpenters are drawing benefits.

In the Medicine Hat vicinity, favourable weather has increased the demand for construction labour, but it is difficult to fill the vacancies, as many of the jobs are of short duration and men do not wish to leave urban centres for temporary work. In the Edmonton area electricians and plumbers are still scarce, the carpenters laid off from local projects have been absorbed and very few building tradesmen are idle.

Pacific Region

Agriculture.—Agriculture continues to make very light demands on the labour market in British Columbia, except on Vancouver Island, where the shortages of dairy help persists. Many farmers have returned to their farms from other industries, but an accurate estimate in this regard is difficult since permits for seasonal entry of industry in rural areas or urban districts of limited population are not required.

Logging.—While the logging industry has failed to procure the maximum manpower requirements, there is a definite easing in the exigencies of labour demands. In the northern interior, Prince George, although still unable to fill a continued call for fallers and sawyers, is in better position than earlier, and in the Vernon and Chilliwack areas several camps have been closed down on account of the snow. Farther south, most companies in the Fernie district will continue to operate with a short staff until the Spring break-up.

The Vancouver office reports that logging operations are now in full swing, and as a result demands for labour have advanced. At Port Alberni a continual demand is recorded in all branches of the lumbering industry,—young men of the required physique are lacking, and married men cannot obtain accommodation for their families.

Mining.—The only vacancies existing in the coal mines of the region at present are for certified miners, and the supply of these workers would appear to be practically exhausted for the time being. In the Nanaimo area the mines continue to work approximately five and a half days a week, and no further curtailment of operations is in sight. At Fernie there has been no variation in conditions during the month and housing still presents the greatest problem.

Labour shortage in the base metal mines is by no means so pressing as earlier in the season. In most areas current manpower needs are not urgent, although this satisfactory condition cannot fail to be affected by the release of agricultural workers at the end of March.

In the Cranbrook area, the principal shortage of labour exists in the mine at Kimberley, where underground workers, both skilled and unskilled, are required.

The labour situation in the Prince George district is generally satisfactory, and a few men have been supplied to several gold mines of the district during February.

Manufacturing.—The manufacturing picture in the coast region has shown no marked change during February. In Vancouver the needs of the shipbuilding yards are well filled, and current demands are easily satisfied. After switch-over from one form of production to another, the local aircraft plant has stabilized itself, and output continues with no new demand for workers. Highly skilled machinists are in continuous demand in the area. Many of these vacancies can and will be filled by machinists and operators of lesser standing if the intensity of shortage increases.

Labour supply conditions continue to improve in the sawmills of the province. At Prince George all the local mills are now in operation again, and transfers-in have eased the manpower situation. In the Vancouver area, too, operators are well supplied with staff, except for one large pulp and paper plant up the coast, where a shortage of unskilled workers persists. Mills which have been shut down due to the slackness of log supply will soon reopen, and the owners have taken advantage of the temporary closure to have their equipment repaired.

Construction.—There is little new construction work under way in the region, with the exception of National Defence projects. In Victoria, practically all these projects have been cleaned up, and there is a resultantly increased number of carpenters making initial claims for unemployment insurance benefits. Vancouver reports a definite decrease in heavy construction through the entire area, and a growing number of carpenters and allied tradesmen are seeking employment.

Throughout the Dominion

Transportation.—As Spring approaches, the labour needs of transportation are on the upgrade. Freight handlers are in greater demand at coastal ports, and throughout the country the approach of Spring thaws makes the work of track maintenance crews imperative. A serious shortage of such workers is prevalent, and the increased demand for railway crew will also be difficult to satisfy.

Grain Elevators.—The impending opening of navigation is the cause of activity in the grain elevator industry, which is attempting to stabilize its employment by reducing seasonal labour and spreading the work over longer periods. It is reported that in addition to some 50 men now on order for the Lakehead elevators, the opening of navigation will bring a demand for a considerable number of additional workers.

Services.—A shortage of help for hotels and restaurants continues to be the most pressing in the services. The service of institutions, laundries and establishments on war contracts are also badly in need of assistants, and such women as are being released from the manufacturing industry show no eagerness to enter this field.

Applications for Employment, Vacancies and Placements, January, 1944

REPORTS received from Employment and Selective Service Offices during the five-week period December 31, 1943 to February 3, 1944, showed a gain in business transacted when compared with the previous four weeks ending December 30, 1943, but a loss in comparison with the four-week period January 1, to January 28, 1943, the changes being very slight in both instances. This computation is based on the average number of placements recorded daily.

Under the first comparison, appreciable increases were reported in manufacturing and services and improvements noted in public utilities, mining and finance but unfavourable changes in trade and logging. In comparison with the first twenty-eight days of January, 1943, declines were shown in manufacturing, construction and services and increases in forestry and logging and trade.

The accompanying chart shows the trend of employment since January, 1942, as represented by the ratios of vacancies notified and of placements effected for each one hundred applications for work registered at Employment and Selective Service Offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications took downward courses although the levels were higher than those shown at January 28, last year. The ratio of vacancies to each one hundred applications was 101·5 during the five-week period ending February 3, 1944, in contrast to 102·2 during the previous period of four weeks duration and 94·0 during the period January 1 to 28, 1943. The ratio of placements to each one hundred applications was 65·3 for the period under review compared with 78·4 during the preceding period and 64·9 in the four-week period ending January 28, 1943.

The average number of vacancies reported daily by employers to the offices throughout Canada during the five weeks December 31, 1943 to February 3, 1944 inclusive was 8,310 as compared with 6,462 during the preceding period December 3, to December 30, 1943 and 8,701 during the four weeks January 1, to January 28, 1943. The average number of applications for employment received daily by the offices during the period under review was 8,183 in contrast with 6,323 in the previous period ending December 30, 1943, and 9,255 in the first four weeks of last year. The average number of placements made daily by the offices during the five-week period ending February 3, 1944, was 5,342, of which 5,158 were in regular employment and 184 in work of one week's duration or less, as compared with a total daily average of 4,957 during the preceding four weeks. Placements in four weeks ending January 28, 1943, averaged 6,016 daily, consisting of 5,699 placements in regular and 317 in casual employment.

During the five weeks December 31, 1943 to February 3, 1944, the offices referred 232,440 persons to vacancies and effected a total of 160,281 placements. Of these the placements in regular employment were 154,753 of which 103,643 were of males and 51,110 of females, while placements in casual work totalled 5,528. The number of vacancies reported by employers was 162,253, for males and 87,058 for females, a total of 249,311, and applications for work numbered 245,487, of which 156,677 were from males and 88,810 from females.

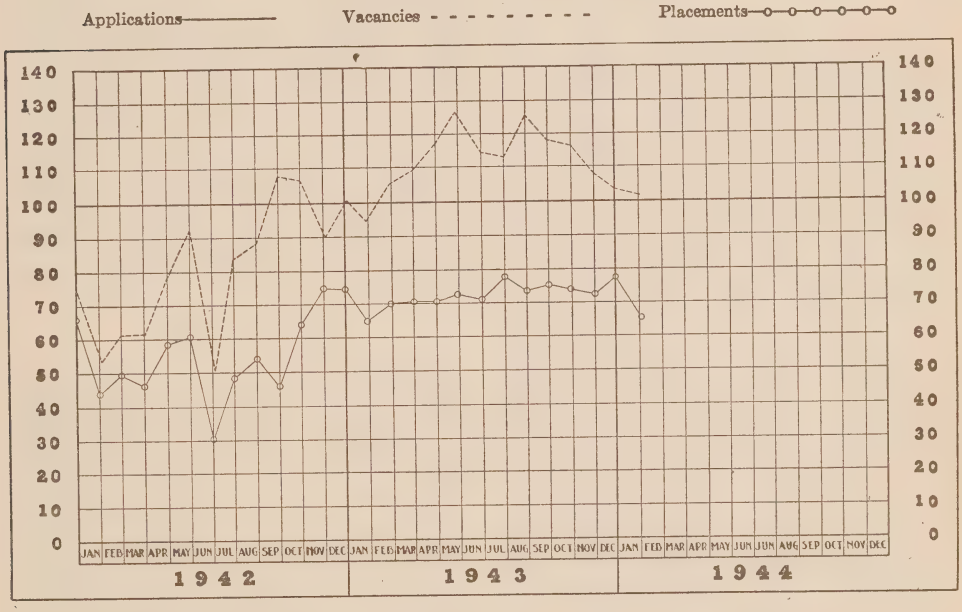
The following table gives the placements effected by employment offices each year, from January 1934 to date:—

Year	Placements		
	Regular	Casual	Totals
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942	809,983	85,638	895,621
1943	1,890,408	53,618	1,944,026
1944 (5 weeks)	154,753	5,528	160,281

Nova Scotia and Prince Edward Island

Opportunities for employment at Employment and Selective Service Offices in Nova Scotia and Prince Edward Island during the five weeks ending February 3, 1944, showed a small increase when compared with the period ending December 30, but a decrease in comparison with the first four weeks of January last year. The daily average was 311 during the period under review, 270 in the previous four weeks and 390 during the period ending January 28, 1943. The average number of placements effected daily was 227, during the five weeks under review, compared with 206 in the preceding period and 263 during the four weeks ending January 28, 1943. The most important changes in placements over the first four weeks of 1943, by industrial divisions, was a gain in manufacturing, which was offset by a reduction in construction. Improvement of more moderate proportions was recorded in

public utilities operation and trade, while changes in all other groups were unimportant. Placements by industrial divisions numbered: manufacturing 2,582; services 1,127; construction 778; public utilities operation 769; trade 743; mining 259 and logging 252. There were 4,586 men and 1,847 women placed in regular employment.



New Brunswick

Orders listed at Employment Offices in New Brunswick during the period ending February 3, 1944, called for a daily average of 209 workers, compared with 190 in the preceding four weeks and 280 during the period ending January 28, 1943. There was a daily average of 165 placements compared with 141 in the previous period, and 198 during the four weeks ending January 28, last year. When comparing placements by industrial groups for the month under review with the four weeks ending January 28, 1943, the loss in construction was more than offset by gains in logging, manufacturing, public utilities operation and trade. Placements by industrial divisions included: manufacturing 1,389; logging 1,172; services 818; trade 476; public utilities operation 436 and construction 351. Regular placements numbered 3,420 of men and 1,308 of women.

Quebec

Positions offered through Employment Offices in the Province of Quebec during the five weeks ending February 3, 1944, averaged 2,545 daily compared with 2,095 in the previous four weeks, and with 2,717 during the four weeks ending January 28, last year. During the period under review, the average number of placements recorded daily was 1,498, in comparison with 1,519 in the preceding four weeks and 1,327 in the four weeks ending January 28, 1943. The substantial increases in logging and manufacturing were mainly responsible for the gain in placements over the period ending January 28, last year, although improvement of smaller proportions was registered in services, trade and public utilities operation. The only decrease of importance was in construction. Placements by industrial divisions included: manufacturing 18,603, logging 8,557; services 5,707; public utilities operation 3,198; construction 3,125; trade 2,946; mining 729 and finance 525. Placements in regular employment numbered 32,127 of men and 10,911 of women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Ontario

There was an increase in the average number of positions available daily at Employment Offices in Ontario during the period under review, there being 3,727, compared with 2,436 during the period ending December 30, and with 3,303, in the first four weeks of 1943. The average number of placements effected daily was 2,262, in comparison with 1,855 in the pre-

ceding period and 2,550 during the four weeks ending January 28, 1943. With the exception of construction in which a fairly large loss occurred, all industrial groups participated in the increase in placements over the period ending January 28, of last year, the most pronounced advances being in manufacturing, trade and logging with somewhat smaller gains in services and mining. In addition, finance, public utilities operation and agriculture showed moderate increases. Industries in which most of the placements were effected were: manufacturing 32,828; services 11,534; trade 6,755; logging 4,568; public utilities operation 3,927; construction 3,030; mining 1,520 and finance 1,104. There were 39,996 men and 24,154 women placed in regular employment.

Manitoba

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Manitoba during the period ending February 3, 1944, was 322, as compared with 327 in the preceding period, and with 352 during the four weeks ending January 28, last year. Placements, likewise, showed a small decrease under both comparisons, the daily average being 244, as compared with 293 in the previous four weeks, and with 275 during the period ending January 28, 1943. Logging and construction reported decreases when compared with the four weeks ending January 28, 1943, but these losses were more than offset by gains in all other groups; the most important of which were in manufacturing, trade and services. Placements by industrial groups included: manufacturing 2,243; services 2,201; trade 1,230; public utilities operation 648; logging 202 and construction 167. During the period under review there were 2,997 men and 2,899 women placed in regular employment.

Saskatchewan

Orders received at Employment Offices in Saskatchewan during the five weeks ending February 3, 1944, called for an average of 182 workers daily compared with 159 in the previous period and 183 during the four weeks ending January 28, 1943. There was a daily average of 136 placements compared with 129 in the preceding four weeks and 160 during the first four weeks of 1943. The only gain of importance in placements over the four weeks of January last year, was in logging. Of the small changes in all other industrial groups the gains exceeded the losses. Placements by industrial groups numbered: services 1,371; manufacturing 733; trade 709; logging 432 and public utilities operation 352. There were 2,044 men and 1,568 women placed in regular employment.

Alberta

During the period ending February 3, 1944, the daily average of positions offered through Employment Offices in Alberta was 340, compared with 321 in the preceding four weeks and 396 during the period ending January 28, of last year. During the period under review, the average number of placements recorded daily was 271, in contrast with 292 in the previous period and 332 during the four weeks ending January 28, 1943. There was a fairly large decrease in construction placements when compared with the first four weeks of 1943, and smaller losses in public utilities operation and logging but these decreases were entirely offset by gains in manufacturing, services, mining and trade. Placements by industrial groups included: services 2,294; manufacturing 1,624; trade 1,060; construction 804; mining 655; public utilities operation 601 and logging 527. Placements in regular employment numbered 4,655 of men and 2,689 of women.

British Columbia

Employment opportunities, as indicated by orders received at Offices in British Columbia during the five weeks under review, showed an increase when compared with the period ending December 30, but a decrease in comparison with the four weeks ending January 28, 1943. The daily average was 960 during the period under review, 663 in the previous four weeks and 1,081 during the period ending January 28, 1943. The average number of placements registered daily was 723 during the five weeks ending February 3, compared with 522 in the preceding period and 911 in the first four weeks of last year. Placements in construction were considerably fewer than during the period ending January 28, 1943, but this loss was offset by a fairly large gain in logging and moderate improvement in trade, mining, services and manufacturing. Industrial divisions in which the majority of placements were effected were: manufacturing 6,173; services 5,828; logging 2,535; trade 2,239; public utilities operation 1,593; construction 1,470 and mining 768. During the period under review, regular placements numbered 13,818 of men and 5,734 of women.

Labour Law

Recent Regulations under Dominion and Provincial Legislation

Armed Forces Rehabilitation—Theatres in Alberta—British Columbia Workmen's Compensation—Quebec Minimum Wages—Saskatchewan Coal Mining—Public Employees' and Teachers' Superannuation, Vocational Education in Saskatchewan

THE Post Discharge Re-establishment Order has been further amended as regards the payment of grants and out-of-work benefits. The regulations governing motion-picture projectionists in Alberta have been slightly changed. British Columbia has added to the occupational diseases compensated. A number of Quebec Minimum Wage Orders have been renewed. In Saskatchewan, regulations concerning the coal mining industry, vocational education and teachers' superannuation have, in each case, been consolidated and a new method of computing overtime pay for mental hospital employees has been formulated.

Dominion

Post Discharge Re-establishment Order

By Order in Council (P.C. 775) of February 8, effective March 1, several amendments have been made in the Post Discharge Re-establishment Order (P.C. 7663, as amended; L.G. 1943, p. 587). Previously, a grant for university education was payable only with respect to a Canadian university. This restriction is now removed. A second amendment concerns out-of-work benefits. When credit has been given to the Unemployment Insurance Fund on behalf of a discharged serviceman according to the length of his army service, the total period for which he may receive out-of-work benefits under the Re-establishment Order is to be reduced by one-fifth of the time for which such credit was made.

As regards the unemployment insurance benefits for discharged personnel, the latter will be considered as having received such benefits during the time they were getting out-of-work benefits under this Order, but not during the time they were receiving any grant, as the Order previously stipulated.

Application for a grant either for vocational training or when awaiting returns from agriculture, must be made within twelve months after the end of the war, or within twelve months after discharge, whichever is the later date. This is a more lenient provision, because formerly these grants could not be paid for a period extending beyond eighteen months after discharge, regardless of when application was made. Vocational training grants may be paid for more than 52 weeks but not longer than the period of service in the Forces, if, in the Minister's opinion, satisfactory progress has been made and additional training is necessary to qualify the discharged person for employment. This extension was only possible in the case of a disabled person before the amendment.

In determining either the time within which application must be made, or the length of time for which out-of-work benefits and vocational grants may be paid, not merely time spent in hospital is excluded, as the order stipulated before, but also the period spent as an outpatient or as a recipient of a grant because of being temporarily incapable of accepting work.

The Minister may now authorize the payment of the fees for a correspondence course in the case of a discharged person undergoing hospital treatment. There is no restriction on the duration of such payments, nor are they to affect any other benefits or grants under this Order. Correspondence course fees may also be paid to an employed person, if the course is necessary to successful rehabilitation and is directly related to the employment in question. This payment may extend beyond 52 weeks but it must not exceed the amount payable for a vocational grant.

Provincial

Alberta Theatres Act

Two amendments in the regulations governing motion-picture projectionists (L.G. 1942, pp. 691, 1173; 1943, p. 1033) were gazetted on February 15. The first change strikes out the clause limiting the number of apprentices to one to each full shift; the second provides that an applicant for an apprentice's certificate must be 18 years of age and must be vouched for by the manager of the theatre and by a projectionist holding at least a second-class certificate. Previously, it was merely stipulated that the projectionist who vouched for an apprentice had to hold a certificate of the class required by the theatre in which he was working.

British Columbia Workmen's Compensation Act

Several changes, gazetted February 3, 1944 and effective from December 15, 1943, have been made in the schedule of industrial diseases for which compensation is payable under this Act. Additions include dermatitis resulting either from any process used in the manufacture of brooms and brushes or from any process involving exposure to metallic magnesium or its alloys. Compensation for vascular disturbances in the upper extremeties due to continuous vibration from pneumatic or power drills, riveting machines or hammers, is now payable in the mining and quarrying industries as well as in the construction industry (L.G., 1942, p. 1174). The operations (L.G., 1943, p. 528) for which pneumoconiosis was compensated are revised as to wording and extended. They now include sewer-construction, road construction or tunnelling; grinding or polishing of stone or metal castings; or any process in any foundry or other manufacturing operation.

Quebec Minimum Wage Act

The following orders gazetted February 19 have been renewed and made effective until April 1, 1945; Order 5 governing the silk textile industry (L.G. 1938; p. 985; 1943, p. 863); Order 10 concerning employees engaged in the pasteurization, manufacture or distribution of dairy products (L.G. 1938, p. 1097; 1942, p. 60); Order 15 relating to packing and grading waste paper (L.G. 1938, p. 1236; 1942, p. 60).

Saskatchewan Coal Mining Industry Act

A consolidation of regulations under this Act was gazetted February 23 and is effective from February 29, 1944. It is the same as the previous consolidation (L.G. 1940, p. 930) but two orders establishing minimum wages for coal miners (L.G. 1940, p. 563) which were not included in this former consolidation are rescinded, since they are now covered by an agreement approved by the National War Labour Board.

Saskatchewan Public Service Act

A new regulation governing overtime pay of employees in provincial mental hospitals was gazetted on February 29 and is retrospective to May 1, 1942. Because of an acute shortage of staff, it has been found necessary to require these employees to work more than the normal "five-day" week. The daily overtime rate is to be derived by dividing the yearly salary by the number of regular working days in the calendar year. According to the old regulations (L.G. 1943, p. 1568) overtime pay was only granted upon special authorization under exceptional circumstances, when it was not possible to grant compensatory leave instead. If sanctioned, it was an hourly rate, based on certain salary classifications up to $1500 per year.

Saskatchewan Teachers' Superannuation Act

By an order gazetted February 7, 1944, administrative regulations issued under this Act (L.G., 1942, p. 1440) have been consolidated with only minor changes.

Saskatchewan Vocational Education Act

The regulations for the payment of grants under this Act have been revised and consolidated by an order gazetted February 7, 1944. The amount of money which may be paid to vocational schools is specified, as well as the standards to which the schools must conform.

Proposed Legislation in Ontario

THE speech from the Throne delivered in the Ontario legislature on February 22 forecast a substantial body of labour and social legislation.

Proposed measures include the limitation of hours of work to 48 in a week and an annual holiday of one week with pay for workers in factories and shops; extension of the provisions for safety, health and welfare and reduction of the hours of work of young persons and women; regulation of the employment of children and young persons in places other

than factories; and broadening of the Workmen's Compensation Act to cover additional occupations and industrial diseases. In regard to freedom of association and collective bargaining, it was considered to be in the best interests of employers, workers and the general public to apply the provisions of the recent Dominion Wartime Labour Relations Regulations to all industries in the province.

Steps are to be taken to make available a well-organized, full-time public health program, embodying adequate school health service, and though the provision of adequate hospital care for all citizens will take time, certain immediate steps are being taken. Industrial employers have been encouraged to develop health services in their factories and there are now 52 full-time physicians, 162 part-time physicians and 464 full-time graduate nurses.

A system of appointment by merit through the application of uniform tests in certain classes of promotion has already been established in the Civil Service. The entire classification of the Service is under review.

The Department of Labour has co-operated actively with the Dominion Department in plans to provide training opportunities for discharged members of the Armed Forces. Projects for the extension of the mining industry are under consideration so that this industry may offer the widest possible opportunities for employment to discharged persons.

The old age pension has been increased by a War Appropriation Bonus of $5 and a provincial bonus of $3 per month, and arrangements are being made to increase mothers' allowances. Expansion of Children's Aid services is forecast and day nurseries have been established in six communities in the province.

Proposed Changes in Child Labour Legislation

BILLS which may alter the law with respect to the employment of children have been presented in the Alberta, Saskatchewan and British Columbia legislatures during the current sessions.

In Saskatchewan the minimum age is 15 for the employment of boys in the working of mines under the Coal Miners' Safety and Welfare Act. The Bill proposes to raise this minimum to 16 years.

An amendment in the Alberta Child Welfare Act would require the consent of the parent or guardian to employ a girl under 18 in a hotel or restaurant.

An Act to amend the Alberta School Attendance Act would compel children who attain the age of 15 during the June term to complete this term at school, instead of being allowed to leave as soon as they become 15.

In British Columbia a Bill to control the employment of children stipulates that children under 15 must not be employed without the Minister's permission in manufacturing, amusement places, logging, certain shops, catering, construction, shipbuilding, the transformation or transmission of electricity or other motive power. The Minister must determine the hours and other conditions under which a child is permitted to work in these industries. The Lieutenant-Governor in Council may add other employments or remove employments from the list to which the Act applies. This Bill has been passed without amendment.

Recent Legal Decisions Affecting Labour

Montreal Firm Convicted of Failure to Comply with Order Requiring Re-instatement of Employees Discharged for Union Activity

ON February 17, 1944, Mr. Justice Legrand of the Montreal Court of Sessions of the Peace found the Canadian Marconi Company guilty of failure to comply with an order of the Dominion Minister of Labour directing the re-instatement of an employee who had been dismissed for trade union activity. The company was find $25 for each of the 55 days during which the failure to comply with the Minister's order continued (a total of $1,375) plus costs. The maximum penalty permitted by the Order in Council (P.C. 4020 as amended) under which the charge was laid, is $500 per day, but the Court refrained from imposing a higher penalty since this was the company's first offence.

The employee in question, one Rouleau, a member of the International Brotherhood of Electrical Workers and secretary of the Marconi Shop Committee, was dismissed on February 5, 1943, the reason given being that his work was unsatisfactory. The union protested this and other dismissals to the Dominion Minister of Labour and on March 12 the Minister appointed an Industrial Disputes Inquiry Commissioner to investigate the situation. The Commissioner was appointed under authority of Order in Council P.C. 4020 of June 6, 1941, which with the amendments in effect on March 12, 1942 provided among other things that the Minister had power (1) to appoint a Commissioner to examine into any allegation that a worker had been discharged or discriminated against because

of membership in or activity on behalf of a trade union and (2) to issue any order he deemed necessary to give effect to the recommendation of the Commissioner, the order to be final and binding.

On April 19, the Commissioner made his report, in which he stated that

> Mr. Rouleau's activity in and championship of union matters was an outstanding cause of offense to his superior and constituted the determining motive, the principal reason for the action which was taken against him in in his dismssal and he should accordingly be re-instated in his employment as of Feb. 5 without loss of pay.

On April 22, the Minister directed the Company to re-instate Rouleau with back pay and without loss of seniority or other rights.

At the time the Minister's order was issued the Order in Council provided no penalty for refusal or failure to comply with such an order, but on May 20, 1943, the Order in Council was amended to provide the fine referred to above. The company was charged with refusal and failure to comply during the period May 20 to July 15, 1943.

In defence, the following arguments were submitted on behalf of the Company: (1) that the Minister's order was issued before the penal section was inserted in the Order in Council and that the amending Order in Council was not retrospective; (2) that the charge was irregular in that it accused the company of two offences, refusing and failing to comply with the Minister's order; (3) that the Minister's order went beyond the Commissioner's recommendation by dealing with seniority rights; and (4) that the section of the Order in Council under which the Minister's order was issued was unconstitutional

> because it can only be justified by being related to the war effort and because it is obviously not related to that effort but only an attempt to add another sanction to the one provided by the Criminal Code for violation of the prohibition contained in article 502A of that Code . . .

In elaborating the fourth point the defence argued that the right of the Dominion to invade the provincial legislative field was limited to what was necessary on account of the war and that the section of the Order in Council under consideration covered industries which had nothing to do with the war directly or indirectly.

The court rejected all the defence arguments. The amendment providing a penalty was not passed until May 20 but the charge against the company commenced only from that date. The Minister's order was still in effect at that time and the company was still not complying with it. Moreover, the company was not charged with two offences, because negligence and refusal were merely different ways of committing the same offence. In addition, the Court did not consider that the Minister in his order had gone beyond the recommendations of the Commissioner. The requirement that Rouleau would retain his seniority and other rights was merely designed to ensure that he would be reinstated in the full sense of the word.

With regard to the constitutional validity of the Order in Council the Court stated that the power given to the Governor in Council by the War Measures Act to adopt measures which he considers necessary for "the security, defence, peace, order and welfare of Canada" had already been well established. Moreover, it was not true that P.C. 4020 did nothing but add to the penalty provided by Sec. 502A of the Criminal Code for discrimination against a worker for union activity in time of peace as well as in wartime. Sec. 502A created an offence and provided a penalty but the Order in Council was designed to determine by inquiry the actual facts and on that basis, where the facts warranted it, make a recommendation to which the Minister might give effect by issuing an order. *Charron v. Canadian Marconi Coy.*, Cour des Sessions de la Paix, Feb. 17, 1944.

Decisions of the Labour Court of Ontario

Assistance to Employees in Forming Collective Bargaining Committee Held not to Constitute Company Interference

On January 14, Mr. Justice Roach ordered certification of the Collective Bargaining Committee of Plant Employees of John Duff and Sons, Ltd., Hamilton, as the collective bargaining agency for those employees. In the judgment, which was oral, the Court expressed itself as satisfied that the committee was not dominated or improperly influenced by the company, although the company gave some assistance in getting it started, and that it represented a majority of the employees. There was no intervener.

The Committee was set up in April, 1943, after certain employees had broached the subject to the management. The notice of the meeting at which the formation of a committee was approved by the employees contained certain language which the Court termed "unfortunate". For example, it was stated that it had "been agreed" that the committee would consist of representatives from various groups in the plant, and that the date for nominations had been "agreed upon"—phrases which might suggest that before the committee could come into existence it had to have the approval of the management. In addition, an agreement which was signed on May 5 between the company and the committee

> contains what might be referred to as the constitution of the committee, and the company being a party to it, and agreeing to everything that is contained in it, would be taken to be agreeing to the constitution, as though that was any of the company's business. It definitely is not.

The Court did not believe, however, that the company had actually interfered with the organization of the committee. The employees were inexperienced in collective bargaining and had no knowledge of the procedure. The company gave some help in getting the organization started but after that made no effort to influence them either in deciding whether they wanted such a committee or in selecting the members of the committee.

I do not think that the formalities which are adopted in any particular case can always be relied upon as indicating the true relationship between the parties. The Collective Bargaining Act is new legislation, and I think the Court should struggle to ascertain, quite apart from the forms used, what the true relationship between the parties actually is.

There were 189 employees on the payroll of the company but only those with six months' service, numbering 130, were allowed to vote. However, 124 voted at the meeting to determine if a collective bargaining agency was wanted, and 117 voted in the election of representatives. In other words, considerably more than half the employees on the payroll indicated their approval of the committee. *Collective Bargaining Committee of Plant Employees of John Duff and Sons Ltd. v John Duff and Sons Ltd.*, Jan. 14, 1944.

Principle Re-affirmed that Application for Certification may not be Entertained for One Year after Judgment on Earlier Application

Oral judgment was delivered by Mr. Justice Roach on January 19 on a second application involving Canadian Furnace Ltd., Port Colborne. In September, 1943, the Victoria Employees' Independent Union, Canadian Furnace Ltd., had applied to be certified as the collective bargaining agency for the employees of the company and a local of the United Steelworkers of America had intervened. On September 17, Mr. Justice Barlow had rejected the claims of both the applicant and the intervener on the ground that neither of them had made out a *prima facie* case for certification (L.G., 1943, p. 1422). On October 26 the local of the United Steelworkers had instituted the present proceedings, claiming that at the time of the original hearings it had been placed in the position where it had been compelled to intervene even though it had not then been in a position to present all the available evidence. Following the principle established in the *York Arsenals* case (L.G., Jan., 1944, p. 108) the Court now dismissed the union's application and stated that no proceedings for certification could be taken until one year from the date of the original judgment.

It was argued that the present case was different from *York Arsenals* in that the local union which was now the applicant had been the intervener in the earlier proceedings whereas in the *York Arsenals* case the applicant was the same in both the first and second proceedings. The Court decided that this distinction was of no significance. Although the local union had been the intervener in the earlier proceedings, it had nevertheless been claiming the right to certification.

The local's position, in fact, was not as strong as that of the applicant in the *York Arsenals* case. When that case came before the Court a second time, the situation had changed in that the applicant then claimed to have more supporters than it had had when the case was first heard. In the present proceedings, no such claim of changed circumstances was made. It was merely submitted that the union had not been in a position to present all the evidence at the first trial. If, however, a party to any proceedings in the courts is unable to present its full case at the moment, it is free to point out the circumstances and ask for an adjournment. No application for adjournment had been made.

Mr. Justice Roach agreed with the judgment in the *York Arsenals* case. It was then held that to permit a new application within less than a year after judgment had been delivered would produce an "unconscionable result never contemplated by the Legislature" by allowing an applicant to make one application after another while the statute prevented the employer, except in case of fraud, from taking action until after a year. *Local 1177, United Steelworkers of America v Canadian Furnace Limited et al*, Jan. 19, 1944.

Employees Divided into Three Groups for Purposes of Vote to Determine Appropriate Bargaining Unit

In an oral judgment on January 28, Mr. Justice Kelly dealt with a case in which it was necessary to determine the appropriate bargaining unit or units in a plant as well as the agency or agencies by which the employees wished to be represented. The workers concerned were those in the Commercial Division of the John Inglis Company at Toronto. A local of the United Steelworkers of America had applied to be certified as the collective bargaining agency of all these employees except the office workers, electricians and pattern-makers. The International Association of Machinists and the International Brotherhood of Boiler-makers, Welders and Helpers of America had intervened since they already had a joint agreement with the company covering machinists and boiler-makers.

The Court considered it unnecessary to dispose of the question of the appropriate bargaining unit until after a vote had been taken. The problem was to conduct the vote in such a way that the wishes of all employees could be determined. The Boiler-makers wished only to represent the employees in their particular craft. The Machinists' Union had acted only for the machinists in the plant in negotiating the existing agreement but the Court found that in many cases this union had "branched out in the general field of unionism" and had acted for all the employees in a plant on an industrial basis. It therefore believed that not only the machinists but also the employees who were not represented by any union should have an opportunity to indicate if they wished to be represented by the I.A.M.

It was directed, therefore, that a separate vote should be conducted for each of three

groups as follows: (1) employees ordinarily included in the craft of the International Association of Machinists, to determine if they wished to be represented by that union or by the United Steelworkers of America; (2) employees who would normally be included in the craft of the International Brotherhood of Boiler-makers, etc., to determine if they would prefer to be represented by the craft union or by the Steelworkers; and (3) the remaining employees to determine if they wished to be represented by any union, and if so, whether by the Steelworkers or the Machinists.

It was agreed that there were 1,076 employees affected by the Steelworkers' application, 432 of which could be classed as machinists, 274 as boilermakers and 370 others. The applicant claimed to have 374 members: 109 machinists, 117 boiler-makers and 148 others. The unions of Machinists and Boiler-makers claimed that at the time they made their agreement with the company they had about 300 and 120 members respectively, but these numbers had now declined to 107 and 44. In addition, there were 85 employees who were members of both the Steelworkers and Machinists and two who belonged to the Steelworkers and Boiler-makers. Thus, 612 of the 1,076 employees belonged to one or other of the unions or to two of them.

In a number of previous cases before the Court, the first of which was the *Canadian Furnace* case (L.G., 1943, p. 1422), it had been held that an applicant must make out a *prima facie* case for certification before a vote could be ordered. It was argued in the present proceedings that the Steelworkers had not made out a *prima facie* case. The Court noted that there were 370 employees outside the agreement which had been entered into jointly by the Machinists and Boiler-makers, and that, of these, 148 belonged to the Steelworkers. The Court stated that if the Steelworkers had applied to represent these employees only, it would have been obliged to refuse the application. It pointed out, however, that the application was for certification as the bargaining agency of all the employees in the Division with a few minor exceptions and it was clear from the figures listed above that though less than half the employees belonged to the Steelworkers, yet a definite majority belong to one or other of the unions and thus showed their desire to be represented by some collective bargaining agency.

The existing agreement between the Machinists and Boiler-markers and the company was found not to be a bar to the Steelworkers' application. This agreement had been signed on November 7, 1942, and it was to run until the end of hostilities between Canada, Germany, Italy and Japan. Sec. 13 (3) of the Act provides that a certificate of the Court cannot be revoked within a year, and "it follows, then, that any agreement negotiated by a bargaining agency for some indefinite period longer than a year should not be a bar to certification or to an application for revocation of certification." *Local 2900, United Steelworkers of America v John Inglis Company Limited et al.*, Jan. 28, 1944.

Union Certified Despite Failure to Deposit Required Documents at Time when Application Filed

Mr. Justice Hope on February 14 ordered certification of a local of the Canadian Brotherhood of Glass Workers as the collective bargaining agency for the employees of the Hamilton plant of the Dominion Glass Company. This union had been successful in a vote to determine whether the employees wished to be represented by it or by a local of the Glass Bottle Blowers' Association of the United States and Canada. It had not, however, filed its constitution, etc. with the court until some time after the vote had been held and the company and the Glass Bottle Blowers' Association argued that for that reason the court could not certify it.

The court took the view that the purpose of the Act should not "be defeated by a strictly literal interpretation particularly where the context permits a broader and more effective interpretation without in any way offending against the normal meaning of the language used". It therefore held that since the union had now filed the necessary documents it had met the requirements of the Act and could therefore properly be certified.

Section 16 of the Collective Bargaining Act provides that

> Every collective bargaining agency shall, upon making application for certification, file with the registrar [of the Court] a true copy of its constitution, rules and by-laws, and a statement of the names and addresses of its officers . . .

The application of the Brotherhood of Glass Workers was first heard by Mr. Justice Chevrier on November 3. He ordered a vote and 366 ballots were cast for the Glass Workers as against 163 for the Glass Bottle Blowers. On January 21 the case came up before Mr. Justice Roach for final disposition but as the Glass Workers had not filed the material required by sec. 16, he postponed the case until January 31 when it was heard by Mr. Justice Hope.

Counsel for both the company and the Glass Bottle Blowers' Association argued that the phrase "upon making application for certification" in sec. 16 means "upon the filing of the application". Counsel for the Glass Workers, on the other hand, contended that "making application" covers the whole period from the time the application is filed until it is finally disposed of. The court accepted the latter argument. "'Making'", it said, "must of necessity be inclusive of all proceedings in connection with an application", and it is sufficient for an applicant to file the material required by sec. 16 at any time during the proceedings or any extension which may be granted. *Canadian Brotherhood of Glass Workers, Local No. 5 v. Dominion Glass Company, Limited, et al.* (1944) Ontario Weekly Notes 137.

Authorization Forms Held not to be Conclusive Evidence of Wishes of Employees

On February 18, Mr. Justice Hope ordered a vote among the employees of the Deloro Smelting and Refining Company to determine if they wished to be represented for purposes of collective bargaining by an Employees' Committee (applicant) or a Federal Union of the American Federation of Labor (intervener).

The main evidence presented by both the applicant and intervener consisted of "authorization forms" signed by the employees. The applicant presented forms signed by a substantial majority of the employees, but it appeared from the evidence that the Union had not started to obtain authorizations until three or four days before the hearing and that 47 of the employees who had originally signed for the Committee later signed for the Union. The Court considered it to be clear that a large majority of the employees wanted to be represented by some collective bargaining agency but that there was not sufficient evidence to show which of the two agencies they preferred. It stated that while authorization cards may be taken as *prima facie* evidence of the preference of the employees, yet in a case such as the present they could not be taken as conclusive evidence since many people may sign petitions and cards without considering carefully what they are signing.

The intervening Union was organized in 1941 and as a result of mediation of the Dominion Department of Labour the union and the company agreed that an employees' committee should be elected to conduct negotiations with the company. A committee of five was then elected including the secretary-treasurer of the union, and an agreement governing conditions of work was concluded with the company on February 14, 1942.

At the annual election in July, 1942, several new members were elected to the committee and the secretary-treasurer of the union was defeated. In November, 1942, the new committee presented a constitution to the employees which was approved at a sparsely attended meeting in July, 1943.

At the time of the present hearings there were 320 employees who came within the definition of "employee" in the Act. The applicant Committee presented authorization forms signed by 220 employees, of whom 197 were agreed by all parties to be employees of the company and within the definition in the Act. The intervening Union presented authorizations from 106 employees including 99 who were agreed to by all parties. The Court stated that at the time the originating summons was issued the Committee was justified in its claim to represent a majority of the employees, but in view of the facts mentioned above it considered that a vote was now necessary. *Employees' Committee of Deloro Smelting and Refining Company Limited v. Deloro Smelting and Refining Company Limited, et al.* Feb. 18, 1944.

Workmen's Compensation in Alberta During 1942

The total number of accidents reported to the Workmen's Compensation Board of Alberta in 1942 was 18,680 compared with 16,928 in 1941, an increase of 1,752. Of the total number of accidents, 59 were fatal; 107 suffered permanent disability; and 18,514 were temporarily disabled.

Total revenue accruing to the Board in 1942 was $2,841,807.13 and total expenditures $2,214,071.99, leaving a balance of revenue in excess of expenditure amounting to $627,735.14 as against a balance of $92,723 in 1941. The largest revenue item was that of assessments amounting to $2,141,236.06, followed by medical aid contributions $493,485.53; interest and investment earnings $207,042.04, and sale of acts $43.50.

Compensation payments amounted to $608,884.74; cost of medical services $322,375.13; provision for disasters $132,719; provision for silicosis, $108,891; provision for claims pending, $95,849; general expense, including expenditure *re* mine rescue cars and stations, $228,743.01. Expenditure under the head of pension awards amounted to $716,610.11.

Statistics for the year 1942 reviewed by the report may be summarized as follows: Numbers of employers within the scope of the Act as at December 31, 1942, 6,322; accidents reported during the year 1942, 18,680; accidents and claims not finally disposed of as at December 31, 1941, 2,239; claims disposed of by award of pensions or payment of compensation, 7,509; claims disposed of by payment only of account for medical aid, 8,924; claims disposed of for which no application for compensation was received, 216; accidents disposed of on which no compensation was due, 2,370; claims on which further payments have to be made, 1,024; accidents awaiting further reports and on which no payments have been made, 876.

Prices

Prices, Retail and Wholesale, in Canada, February, 1944

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

A decline of 0·1 to 118·9 (1935-39=100) in the Dominion Bureau of Statistics cost-of-living index occurred between January 3 and February 1, 1944. (*See* Table I.) Weakness in foods was responsible, and outweighed small advances in fuel and lighting, clothing and miscellaneous items. Foods declined a further 0·6 to 130·9, due to continued weakness in eggs which was only partially offset by increases for fresh vegetables. A gain of 0·3 to 113·0 for fuel and lighting reflected higher coal prices in eastern Canada while minor gains in women's wear and piece goods moved the clothing index up 0·2 to 121·3. Miscellaneous items rose from 108·9 to 109·1 due to an advance in health maintenance costs and in periodicals. The remaining two groups were unchanged at 111·9 for rentals and 118·4 for home-furnishings and services.

City cost-of-living index movements (on the base August, 1939=100) were generally lower between December, 1943 and February, 1944, influenced mainly by declines in foods. (*See* Table II.) The Vancouver index moved down 0·8 points to 116·7, while declines of 0·4 to 121·0 for Montreal and to 117·0 for Toronto were noted during the two-month interval ended February 1, 1944. Edmonton at 115·7 for February 1 compared with an index level of 116·0 in December, while Saskatoon and Halifax indexes at 119·3 and 117·9 respectively, were each 0·2 lower. Winnipeg remained unchanged at 115·4 as

(c) The basis of these figures is the record of rents collected in the 1941 Census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the change indicated by these reports.

(d) Rents marked (d) are for apartments or flats. Other rent figures are for single houses. Apartment and flat rents have been shown where this type of dwelling is more common than single houses.

weakness in foods was offset by increases in fuel and lighting and miscellaneous items. In the Saint John index, an increase of 0·1 to 118·6 was due to a substantial advance in fuel and lighting which overbalanced easier food quotations.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted although chain store prices are used in the calculations of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New Wartime price series on base December 1942=1000, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised.

submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a $4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between $600 and $2,800 in 1938. The average expenditure was $1,413.90, divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home-furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last-named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent). $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index brought the total family living expenditure to $1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home-furnishings, etc., with their weights, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE under the title, *Price Control in Canada.*

Wholesale Prices, February, 1944

The general index of wholesale prices advanced 0·2 points to 102·7 (1926=100) in February. (*See* Table V.) A gain of 1·9 points to 117·8 for wood, wood products and paper was primarily responsible for the increase. It reflected a sharp gain in the export price of pulp shipped to the United States, although certain spruce descriptions registered minor gains in this group also. Increased storage charges for potatoes and onions contributed to a gain of 0·1 to 95·2 for vegetable products and outweighed small declines for fresh fruits and cocoa butter. Chemicals and allied products closed at 100·2, up 0·1, while a drop of 0·5 to 107·8 in animal products was due to lower price for eggs, whitefish, certain live-stock prices, fats and fowl. In this group minor advances were recorded for furs, fresh meats, fresh milk at Vancouver and butter. Other groups were unchanged, fibres, textiles and textile products at 91·9; iron and its products 116·0; non-ferrous metals 79·7, and for non-metallic minerals 102·9.

The Canadian farm product wholesale price index was 0·3 points higher at 104·3 in February. Field products gained 0·4 to 92·5 due to higher quotations for potatoes, onions and hay, while animal products moved from an index level of 123·8 to 124·1, with live-stock prices (including bonuses) and fresh milk outweighing declines for eggs and fowl.

Industrial Accidents

Fatal Industrial Accidents in Canada, 1943

Analyzed According to Industries, Causes, Localities and Months

AN analysis of fatal industrial accidents in Canada during the calendar year 1943 by industries, causes, provinces and months is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course of, or arising out of their employment; also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly reviews, each containing an analysis of accidents occurring during the period covered, appeared in the LABOUR GAZETTE, for May, August and November, 1943, and February, 1944.

The record is compiled from reports from the following governmental authorities,—The Board of Transport Commissioners of Canada; the Explosives Division of the Federal Department of Mines; The Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Chief Factory Inspector; and the British Columbia Department of Mines. In addition, reports were received also from the correspondents of the LABOUR GAZETTE resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces, and Table III by months. The last two tables also include summary figures for 1942, which are a final revision of the figures published in the LABOUR GAZETTE, March, 1943, by the inclusion of accidents occurring in 1942 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the LABOUR GAZETTE, for May, August and November, 1943, and February, 1944. The figures for 1943, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1942.

In some industries, where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences. For example, in fishing and trapping there was an increase in the number of fatalities from 34 in 1942 to 49 in 1943, which may be explained by the fact that during 1943 there was a serious disaster in this industry when 21 fishermen were drowned; and there was also a decrease in fatalities in the construction group from 227 in 1942 to 146 in 1943, which may be largely due to a reduction of employment in this industry.

There were three disasters during the year under review, one of which occurred on January 16, when a freighter foundered and sank in a storm, off Cape Scott, Northern Vancouver Island, and fifteen members of the crew were drowned. The other members of the crew reached shore in a lifeboat and survived. On April 21, a fishing schooner sank following a collision with a freighter in darkness, off Halifax, N.S., and 21 members of the schooner's crew were drowned. Seven other members of the crew escaped in dories. Another disaster occurred in Halifax basin, on July 6, when a tug belonging to Halifax shipyards sank following a collision with a freighter. The tug was used for conveying welding equipment and workers to repair ships in the basin, and 19 of the 24 workers on board were drowned.

On June 23, nine loggers were drowned in La Lievre River, near Chambord, Quebec, after a motorboat overturned when the occupants became panicky after the craft caught fire. An engineer, a fireman, a conductor, a brakeman, and three cablemen were killed, when a gravel train ploughed into a caboose, near Cranberry, Manitoba, on July 17. In a collision of two trains, near Campbellton, N.B., on May 29, an engineer, two firemen and a brakeman were killed.

(a) Decennial census of 1941. (b) Annual census of industry 1941. (c) Annual census of industry 1942. (d) Fishermen only, annual census of industry 1942. (e) Revised figures for 1942. (f) Electricity employees only annual census of industry 1942. (g) Preliminary figures.

Five explosives plant workers lost their lives when burned in an explosion on a cordite range in the kneader section of the plant, at Nobel, Ontario, on June 29. At Glace Bay, N.S., on October 2, five coal miners were killed when they fell from a lift down a 500 foot shaft. When trapped in a mine, following an explosion which occurred while an electric cutter was being used, four coal miners lost their lives, near Lethbridge, Alberta, on August 9. Four members of an oil tanker crew died of burns following an explosion and fire on a gasoline laden vessel, while en route from Lake Huron, Ontario, on July 26.

On February 10, three construction labourers were burned to death in a fire that destroyed a dormitory building at Arvida, Quebec. An oiler, a tractor operator and a cookee engaged on highway construction, lost their lives when buried in a snow slide at Skeena, B.C., on February 12. Three fishermen were killed in an explosion on a tug, on April 30, near Port Burwell, Ontario. An explosion of coal gas in the basement of a bakery plant resulted in the deaths of three employees at Montreal, on August 26. Three seamen were drowned near Canso, N.S., on October 7, when a schooner was wrecked on a reef in a storm.

Fatalities by Causes

The classification of accidents according to causes shows that the largest number, 489, came under the category "moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft (civil aviation). The largest number of accidents in this category, 129, appears under the heading "automobiles and other power vehicles and implements", with 114 classified under the heading "being struck or run over by, or crushed by or between cars and engines," (84 of these being engaged in steam railways); 108 were in connection with watercraft (11 of these being in logging, 39 in fishing and trapping, and 32 in water transportation); 42 appear under aircraft; 32 were caused by mine and quarry cars; 29 were due to derailments and collisions (27 of which were in steam railways); 20 were caused by persons falling from or in cars or engines, and 15 by animal drawn vehicles and implements.

Next in order were "falls of persons", causing 223 fatalities as follows: 72 from elevation, 61 into pits, shafts, harbours, rivers, etc., 38 from ladders, 15 falls on the level, 14 into tanks, vats, kilns, etc., 9 from loads, etc., 5 due to collapse of support, 4 into holds of vessels, 4 down stairs and inclines and 1 on sharp objects.

Fatalities numbering 203 were caused by "dangerous substances", classified as follows: 45 were due to hot and inflammable substances and flames, 38 to electric current, 33 to gas fumes, poison, etc., 31 to explosive substances, 26 to steam escapes, boiler explosions, compressed air, 23 to conflagrations, and 7 to mine explosions from gas, coal dust, etc.

"Falling objects" caused 198 fatalities, of which 63 occurred in mines and quarries, 58 were due to trees and limbs, 42 to objects falling from elevations, loads, piles, 15 to breaking or loosening of straps, cables, etc., 6 to collapse of structure, and 14 to other falling objects.

Hoisting apparatus caused 43 fatalities, 41 fatalities were caused by striking against or being struck by objects, 29 by prime movers, 24 by handling of objects, 20 by animals (17 of which were due to horses), 11 by working machines, and 7 by tools.

The category "other causes" includes 124 fatalities of which 84 were due to industrial disease, strain, etc., 13 to lightning, frost, storms, sunstroke, 9 to cave-ins, land slides, ice jams, etc., 6 to shooting and violence, 4 to drownings not elsewhere specified, 2 to infection not elsewhere specified, and 6 concerning which no particulars were available.

Fatalities by Provinces

The classification of accidents according to provinces shows that the largest number, 464, occurred in Ontario. There were 302 in Quebec, 268 in British Columbia, 143 in Nova Scotia, 101 in Alberta, 54 in Manitoba, 37 in Saskatchewan, 8 in Prince Edward Island, and 2 in Yukon and Northwest Territories. In Ontario the fatalities occurred by industries as follows: manufacturing, 117; transportation and public utilities, 102; agriculture, 52; mining, non-ferrous smelting and quarrying, 51; construction, 37; logging, 35; service, 34; trade, 24; fishing and trapping, 6; and electricity, gas, and water production and supply, 6. In Quebec, the largest number, 86, was in transportation and public utilities, with 82 in manufacturing, 40 in construction, 29 in logging, 25 in mining, non-ferrous smelting and quarrying, 15 in trade, 14 in service, 6 in electricity, gas, and water production and supply, and 1 in finance. In British Columbia there were 64 fatalities in logging, 48 in mining, non-ferrous smelting and quarrying, 48 in manufacturing, 44 in construction, 36 in

transportation and public utilities, 11 in fishing and trapping, 7 in agriculture, 5 in service, 4 in trade, and 1 in electricity, gas, and water production and supply. In Nova Scotia and Alberta there were respectively 39 and 38 fatalities in mining, non-ferrous smelting and quarrying, and no other industry experienced as many fatalities in these provinces. Transportation and public utilities registered the largest number in Manitoba, New Brunswick and Saskatchewan, there being respectively 20, 16 and 13 in this industry.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,412, being classified under the various groups of industries as follows: transportation and public utilities 315 or 22·31 per cent of the total; manufacturing, 298 or 21·11 per cent; mining, non-ferrous smelting and quarrying, 207 or 14·66 per cent; logging, 147 or 10·41 per cent; construction, 146 or 10·34 per cent; agriculture, 99 or 7·01 per cent; service, 76 or 5·38 per cent; trade, 58 or 4·11 per cent; fishing and trapping, 49 or 3·47 per cent; electricity, gas, and water production and supply, 16 or 1·38 per cent; finance, 1 or ·07 per cent.

The fatalities by months indicate that the greatest number, 152, occurred in June, while the lowest total, 84, was recorded in December. The table gives the total number of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance, service, etc., the figures were those of the decennial census of 1941, for manufacturing, from the annual census of industry for 1941, for mining, fishing, electricity, steam railways, street and electric railways, telegraphs and telephones, and express, from the annual census of industry for 1942.

While the latest figures available as to numbers employed are not in any instance those for the year under review, they are included, however, for general comparative purposes.

Fatal and Non-Fatal Accidents in Canada

Reported by Provincial Workmen's Compensation Boards

THE Labour Departments' records of industrial accidents include only fatal accidents and fatalities arising out of employment; including those due to industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, steam and electric railway operations, additional information is available from various governmental departments and commissions.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation Boards for 1942 were summarized in the following issues: Nova Scotia, New Brunswick, Manitoba and Saskatchewan, August, 1943, pages 1198-1200; Ontario and British Columbia, September, 1943, page 1322; and Alberta and Quebec, elsewhere in this issue on pages 386 and 410.

In none of the provinces does the Board have jurisdiction over accidents in all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but include to some extent, fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by the several Workmen's Compensation Boards for 1937, 1938, 1939, 1940, 1941, 1942 and also include some preliminary figures for 1943. It may be observed that the Department of Labour's figures show more fatal industrial accidents as occurring during each year than the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year. This difference is largely accounted for by the fact that the Provincial Boards do not record accidents in all industries. In addition, however, the Boards' records only show accidents to employees, while the records of the Department of Labour register accidents to all persons occupied in industry, including employers and workmen carrying on their own business, of whom there are many, particularly in trucking, trade, etc., as well as in agriculture.

INDUSTRIAL ACCIDENTS, NON-FATAL AND FATAL, IN CANADA, 1937, 1938, 1939, 1940, 1941, 1942 and 1943, REPORTED BY PROVINCIAL WORKMEN'S COMPENSATION BOARDS

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some boards.
(b) Preliminary figures.
(c) Subject to further revision.

Co-operation in Canada in 1942

Annual Report of National Executive of Co-operative Union of Canada

THE co-operative Union of Canada in its 1942 annual report, announces a considerable growth in the volume of business transacted by its affiliated societies. The aggregate trade of the retail societies, in 1942, reached a new high. There was, however, a slight falling off in membership reported; 202,320 as compared with 205,533 in 1941.

The Canadian Co-operative Union was founded in 1909 as an educational body similar in its purposes to the Co-operative Union of Great Britain. The Union publishes a monthly magazine, "The Canadian Co-operator" in the December 1943 issue of which appears the 1942 report. Because of wartime restrictions on labour and motor travel the United Board, or governing body of the Union, deemed it inadvisable to hold a congress meeting in 1942. However, it was decided to prepare and issue an annual report to provide as complete a return as possible with respect to the financial position and operating experience of the affiliated societies.

For the year under review reports were received from 200 societies as compared with 125 for 1941. Twenty-eight societies failed to report compared with 82 for the previous year.

Statistical Review

The aggregate sales for 1942 of the retail societies reporting amounted to $12,574,482.49. Increased sales were shown by 157 societies, aggregating $2,332,194.40 and twenty societies reported decreases totalling $109,641.07. There was thus a net increase in sales by the retail societies of $2,222,553.33. This represents a percentage gain in retail sales of 49·01. In addition, two dairy societies reported aggregate sales of $516,684.95. One dairy society reported an increase of $4,830.06 and the other a decrease of $1,670.79.

The four provincial wholesale societies affiliated with the Union—Alberta, British Columbia, Manitoba and Saskatchewan all showed trade increases, as did also the Canadian Live Stock Co-operative (Maritimes). The Consumers' Co-operative Refineries likewise showed a substantial increase in sales. In all, the wholesale societies, together with the refineries transacted a total business amounting to $10,805,113.72. The total distributive turnover, wholesale and retail, therefore amounted to $23,379,596.21, as compared with $19,909,641 in the previous year. Such volume is exclusive of the turnover of two large grain marketing associations—Manitoba Pool Elevators, Limited, and Saskatchewan Co-operative Wheat Producers, Limited—both of which are members of the Union, which are not reported and also of the marketing transactions of Saskatchewan Co-operative Livestock Producers, Limited, $12,020,146.47 and Canadian Livestock Co-operative (Maritimes) $929,182.75.

The share capital of the reporting retail societies amounted to $1,085,939.59, an increase of $200,998.50 during 1942. The combined investments in share and loan capital were $1,570,129.12, an increase of $301,621.94. The aggregate net surplus of the retail societies for 1942 was $831,627.59, an increase of $308,185.81.

One hundred and forty-seven retail societies, fifty more than for the previous year, reported the declaration of purchase dividends.

Membership

The aggregate membership of 181 retail societies that reported was 45,301 or 13,039 more than was reported by 110 societies in the previous year.

Including those of the marketing organizations, 152,205, the dairy societies, 383, the co-operative residence, 92, and the educational organizations 4,339, the total individual membership of the reporting affiliated societies was 202,320.

In commenting on the progress made by the co-operative movement in Canada the report states that concrete steps have been taken during the year towards the organization and adequate financing of provincial sections of the Union. While Congress had had to be postponed, a limited Interprovincial meeting of representatives of leading co-operatives, affiliated and non-affiliated from five provinces had been convened in Regina in June, 1942. There the need for a strong Canadian co-operative movement embracing all types of co-operatives had been discussed and an organizing committee had been set up to direct and supervise this work. It was also the considered opinion that all the influence of Canadian co-operators should be exercised in favour of the International Co-operative Alliance being given representation on any committee or other body appointed to solve post-war international problems.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

Minister—HON. HUMPHREY MITCHELL

Deputy Minister—ARTHUR MACNAMARA

Assistant Deputy Minister—V. C. MACDONALD

Editor—HARRY J. WALKER

VOLUME XLIV] APRIL, 1944 [NUMBER 4

Notes of Current Interest

Canadian delegation to I.L.O. Conference

At the International Labour Conference held in Philadelphia commencing April 20, Canada was represented by the following delegation:

GOVERNMENT

Hon. Humphrey Mitchell (given standing, as Minister of Labour, as a special government delegate).

Delegates.—Paul Martin, K.C., M.P., Parliamentary Assistant to the Minister of Labour; Brooke Claxton, K.C., M.P., Parliamentary Assistant to the President of the Privy Council.

Alternate Delegates.—Arthur MacNamara, Deputy Minister of Labour, and Vincent C. MacDonald, K.C., Assistant Deputy Minister of Labour.

Technical Advisers.—Hon. L. D. Currie, Minister of Labour for Nova Scotia; Hon. James C. McLenaghan, Minister of Labour for Manitoba; Hon. Charles Daley, Minister of Labour for Ontario; J. O'Connell-Maher, Associate Deputy Minister of Labour for Quebec; Mrs. Cora Casselman M.P.; Alfred Charpentier President, Canadian and Catholic Confederation of Labour, Quebec, P.Q.; Walter S. Woods, Associate Deputy Minister, Department of Pensions and National Health, Ottawa; H. C. Goldenberg, Director-General, Economics and Statistics, Department of Munitions and Supply, Ottawa; Allan M. Mitchell, Director of Employment Service, Department of Labour, Ottawa; Alfred Rive, First Secretary, Department of External Affairs, Ottawa; Eric Stangroom, Unemployment Insurance Commission, Ottawa; Antonio Garneau, President of the Health Insurance Commission of Quebec; J. P. Despres, Secretary of the Superior Labour Council of Quebec City; Louis Fine, Chief Conciliation Officer, Department of Labour of Ontario.

Secretary.—John Mainwaring, Assistant Editor, LABOUR GAZETTE, Department of Labour.

EMPLOYERS

Delegate.—W. C. Coulter, President of Coulter Copper and Brass Co. Ltd., Toronto, former president of the Canadian Manufacturers' Association.

Technical Advisers.—Prof. J. C. Cameron, Queen's University, Kingston, Ont.; J. R. Kimpton, Assistant Manager, Dept. of Personnel, Canadian Pacific Railway, Montreal, P.Q.; H. W. Macdonnell, Legal Secretary, Canadian Manufacturers' Association, Toronto, Ont.; Ralph Presgrave, Vice-President, J. D. Woods and Gordon, Ltd., Toronto, Ont.; Allan C. Ross, Ross-Meagher, Ltd., and Ontario Vice-President of Canadian Construction Association, Ottawa.

EMPLOYEES

Delegate.—Percy R. Bengough, President of the Trades and Labour Congress of Canada, Ottawa.

Technical Advisers.—Wm. L. Best, C.B.E., Secretary of Dominion Joint Legislative Committee, Railway Transportation Brotherhoods, Ottawa; George Burt, Regional Director,

United Automobile Workers of America, Windsor, Ont.; Robert Carling, M.P.P., International Board Member, International Union of Mine, Mill & Smelter Workers, Sudbury, Ont.; Norman S. Dowd, Executive Secretary, Canadian Congress of Labour, Ottawa; Ernest Ingles, Vice-President, International Brotherhood of Electrical Workers, London, Ont.; Edward Larose, General Representative, United Brotherhood of Carpenters and Joiners of America, Montreal, P.Q.

Agenda of Conference

On the agenda of the Conference were proposals dealing with reconstruction policy on which it was intended that draft Conventions and Recommendations would be submitted to the assembled member countries for consideration and possible adoption. These proposals had to do with the following subjects:

The organization of employment in the transition from war to peace;

Social security: principles and problems arising out of the war;

Recommendations to the United Nations for present and post-war social policy.

Also to be studied were items relating to the future policy, program, and status of the I.L.O.; minimum standards of social policy in dependent territories; and reports on the application of conventions adopted at sessions of the Conference held in previous years.

The LABOUR GAZETTE will publish in a forthcoming issue an account of the proceedings of the Conference with special reference to the participation of the Canadian delegation.

Resignation of Chairman of National War Labour Board

The resignation of the Hon. Mr. Justice C. P. McTague as Chairman of the National War Labour Board was announced in the House of Commons on March 16 by the Prime Minister, Rt. Hon. W. L. Mackenzie King.

The Prime Minister read to the House Mr. Justice McTague's letter of resignation, and his own reply, in which he expressed his thanks for the services rendered by Mr. McTague in part as follows :

"I should like to take this opportunity to express anew the appreciation felt by the Government of the signal service you have rendered to Canada's war effort in your capacity as Chairman of the National War Labour Board throughout a very difficult year in the life of the Board; also of the services you had previously rendered over a period of two and one-half years on the War Contracts Depreciation Board.

"I should like to add a word of warm personal appreciation of the uniformly helpful and cordial relations which we have enjoyed during the whole of the period you have served as Chairman of the Board, and of your readiness throughout that time to be of such assistance to the Government as lay within your power.

"In the light of the strenuous nature of your duties I can well understand your present feelings of fatigue. I hope that being relieved of some of the pressure under which you have been working, you may speedily regain the resiliency of mind and spirit which in the past you have greatly enjoyed."

Mr. Justice Archibald Chairman National War Labour Board

Mr. Justice Maynard B. Archibald, of the Supreme Court of Nova Scotia, was on March 20 appointed Chairman of the National War Labour Board, replacing the Hon. Mr. Justice C. P. McTague. Order in Council P.C. 1986, providing for the appointment, was tabled in the House of Commons by the Hon. Humphrey Mitchell.

Mr. Justice Archibald has acted on a number of occasions on commissions and boards set up by the Department of Labour to deal with problems of industrial relations.

New federal departments of Veterans' Affairs, Social Security and Reconstruction

The establishment of a federal Department of Reconstruction "with authority to formulate and co-ordinate reconstruction plans and carry out such plans during a certain number of years following the cessation of hostilities" is to be considered by the House of Commons shortly, the Prime Minister, Rt. Hon. W. L. Mackenzie King, having made a motion to that effect in the House on March 20.

Provision is also to be made for the splitting-up of the Department of Pensions and National Health into two new departments, according to similar motions by the Prime Minister. The first of these will be a Department of Veterans Affairs, which will have jurisdiction over "all matters not by law assigned to any other department relating to the care, treatment, training or re-establishment of members and former members of the armed forces and other persons and all such other matters as may from time to time be assigned."

The other will be a Department of Social Welfare, which is to assume responsibility for "matters relating to the social security and welfare of the people of Canada," as well as "that part of the Department of Pensions and National Health not to be included in the Department of Veterans' Affairs."

Employment and industrial statistics

The lastest statistics available reflecting industrial conditions in Canada are printed in the table below.

Continued curtailment in employment at the beginning of February was recorded by the Dominion Bureau of Statistics index as compared with the previous month. Comparative figures at certain dates are 183·2 for February 1; 185·7 for January 1; 190·5 for December 1, 1943; 181·2 for February 1, 1943; and 106·5 for February 1, 1939. A decline at February 1 has been recorded in five of the last six years. It was reported that previously employment had usually though not always, shown partial recovery at February 1, from the

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† Week ended March 30, 1944.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base, June, 1941=100. (4) Base, 1935-1939=100. (5) Adjusted, where necessary, for seasonal variation. (6) Notes in the hands of the public. (7) Figures for four weeks ended March 25, 1944, and corresponding previous periods. (8) MacLean's Building Review.

declines of the year-end. The average change in employment between January 1 and February 1 during the period 1921 to 1943 has been a slight gain. For the 14,311 firms reporting to the Bureau a total working force of 1,843,389 at February 1, was recorded, a decline of 1·4 per cent as compared with the previous month.

A substantial increase was shown in the total payroll of the reporting firms however, the weekly figure being $58,531,994 or 5·5 per cent greater than at January 1. The per capita average at $31.75 per week at February 1, was the highest since the record was commenced.

Advance was recorded in the manufacturing group as compared with the previous month but this was entirely in the non-durable goods division mainly in textile and rubber factories while a further decline was recorded in plants producing heavy goods in non-ferrous, as well as in iron and steel industries. Employment was lower in transportation, construction and in trade but higher in logging, mining, and services.

Productive operations as indicated by the index of the physical volume of business showed decline in February from the level of the previous month. The index for February was 241·6 and for January 247·0 while for February1943 it was 227·3. Increased activity was indicated as compared with the previous month for manufacturing mineral production and construction while decline was indicated in the production of electric power and in the distribution of goods. Comparing the first two months of 1944 with the corresponding period of 1943 the general index indicated an advance of 7·8 per cent in the volume of business, owing mainly to the expansion in production in war industries. Four of the five main factors in the business index were at a higher level in this comparison, mineral production being 9·5 per cent greater and manufacturing 6·7 per cent greater while a decline of 19·3 per cent was recorded in the construction industry.

George B. Henwood, new Chairman, Western Labour Board

Under Order in Council, P.C. 1902, dated March 17, 1944, Mr. George B. Henwood, K.C., of Edmonton, was appointed Chairman of the Western Labour Board. Mr. Henwood succeeded the Honourable Mr. Justice George B. O'Connor, who resigned earlier in the month in order to accept the chairmanship of the Wartime Labour Relations Board at Ottawa (see elsewhere in this issue, p. 477).

Wartime salaries Order amended

An Order in Council of March 3 (P.C. 79/1385) makes two changes in the Wartime Salaries Order (L.G., 1942, p.283). This order controls the remuneration of persons "above the rank of foreman or comparable rank." For the purpose of the order, any person receiving less than $175 per month was considered to be not above that rank, and therefore within the jurisdiction of the Wage Control Order; but the figure has now been changed from $175 to $195.

A further change in the Salaries Order provides for the incorporation of the cost of living bonus into the rate of salary for salaried officials. This provision, which parallels a similar clause in the recently revised Wage Control Order (L.G., Dec., 1943, p.1602), is as follows:—

> A cost-of-living bonus pursuant to the terms and provisions either of paragraph 2(a) or of paragraph 4 of this Order shall not be paid to a salaried official in respect of any payroll period commencing on or after February 15, 1944. Where, however, a cost-of-living bonus has in fact been paid to a salaried official in respect of the last payroll period commencing prior to February 15, 1944, the amount (or rate) of such cost-of-living bonus may be incorporated into the rate of salary and be paid as salary for any payroll period commencing on or after February 15, 1944.

Change in title of Canada's vocational training program

A new official title, "Canadian Vocational Training," has recently been given to Canada's War Emergency Training Program. The new name was unanimously recomended by members of the Vocational Training Advisory Council, which represents provincial governments, trade unions, and employers' groups. It will more accurately describe the nature of the program, which has been changing and is expected to change still further during the next year in order to meet the post-war situation. Meanwhile the program already in operation, which consists of vocational training for war workers, members of the armed forces and discharged servicemen, will continue unchanged. Assistance to university students, classes for agriculture workers, and long-term apprentice training—provided for in the Vocational Training Co-operation Act, under which the program operates—will also be continued. More extensive plans, including various types of post-war rehabilitation training, are now being considered by the Training Branch of the Department of Labour.

Physical training, which has been an important aspect of the program since the Youth Training Act was passed in 1937, will be taken

over by the Department of Pensions and National Health.

"A large part of the training program," states the Minister of Labour, "has been carried out in schools and shops offered at no cost by municipal and provincial governments. Without this co-operation—which has been deeply appreciated by the Dominion Government—it would have been impossible to get the War Emergency Training Program under way in such a short time. We expect that similar arrangements will be carried out in the post-war period, to meet what problems then exist." The change in Title was made by order in council.

A description of recent activities under the program, together with a statistical statement of the number of persons, male and female, receiving the various types of training offered, appears elsewhere in this issue, on page 497.

Studies of reconstruction problems

The report of the Advisory Committee on Reconstruction was summarized in the February LABOUR GAZETTE (p. 150). At that time reference was made to the reports of six subcommittees to the Advisory Committee. These reports, which supplement the recommendations of the main committee and constitute detailed studies of various specific problems of reconstruction have now been printed, and are available from the King's Printer, Ottawa, at a cost of 10 cents each.

The reports have the following titles: I. Agricultural Policy; II. Conservation and Development of Natural Resources; III. Publicly Financed Construction Projects; IV. Housing and Community Planning; V. Post-War Employment Opportunities; VI. Post-War Problems of Women.

Report V. on Post-War Employment Opportunities, is summarized on page 446 of this issue.

Cost of living advances fractionally

The Dominion Bureau of Statistics cost-of-living index advanced from 118·9 for February 1, 1944 to 119·0 for March 1. The food group index moved up 0·2 points while the miscellaneous items index declined 0·1. The rise in the food index from 130·9 for February to 131·1 for March was due to increases for fresh vegetables which overbalanced minor declines for eggs, oranges, lemons, and cheese. Miscellaneous items fell from 109·1 to 109·0 following a reduction in aspirin prices. Other group indexes remained unchanged, rentals at 111·9, fuel and light at 113·0, clothing at 121·3, and homefurnishings and services at 118·4. After adjustment to the base August, 1939, as 100 the index was 118·1 at March 1.

Prof. Finkelman chairman Ontario Labour Relations Board

Hon. Chas. Daley, Minister of Labour for Ontario, announced early in April the appointment of Mr. Jacob Finkelman as chairman of the new Labour Relations Board for Ontario. Mr. Finkelman has been Registrar of the Ontario Labour Court, which will continue to function until the cases now before it have been disposed of. He was formerly Professor of Industrial Law at the University of Toronto. The other members of the new Board are: (1) Workers' representatives: Russell Harvey, of Toronto, member of the International Photo-Engravers' Union (AFL); E. J. Hopcraft of Toronto, member of the International Brotherhood of Maintenance of Way Employees; H. J. Padgett of Toronto, District Organizer with the United Steel Workers of America (CIO); (2) Employers' representatives: W. J. Corbett, Personnel Manager of Hayes Steel Co., Merritton; C. E. Shumaker, Personnel Manager, Goodyear Tire and Rubber Co., New Toronto; R. W. Teagle of Teagle and Son, Toronto.

Study industrial relations legislation in Manitoba

Labour - Government - Management Relations with reference to the Governmental Position Therein is the title of a report prepared for the Government of Manitoba by Professor W. F. Lougheed, Acting Head of the Department of Commerce of the University of Manitoba. The author was asked to review and summarize the methods adopted in certain countries to improve relations between employers and employed, giving some attention to the history of governmental intervention in this field in Britain and the United States.

The report of some 170 pages contains chapters on the legislation in Great Britain, Australia, Canada, Sweden and New Zealand. A brief introductory statement indicates the present provincial position in relation to the problem having regard to the division of legislative powers between the Dominion and the provinces under the British North America Act and the exercise by the Dominion of war-time emergency powers in controlling wages and regulating manpower and industrial relations. A final chapter brings together the more important points in the legislation in the different countries. The author's task was descriptive and no recommendations are made, but there is interesting discussion of the principles involved in trade union organization and collective bargaining, and in the measures adopted to encourage collective bargaining and to prevent or settle industrial disputes.

New safety code for construction workers in Ontario

Horse-Sense Scaffolds and Platforms is the title of a booklet published in February by the Construction Safety Associations of Ontario. It supplements the Code of Safety Regulations for the Construction industry drawn up earlier by the Associations.

The booklet is written in a humorous and forceful style with safety slogans and cartoons scattered through the text. Its message is that "construction accidents can be reduced and even prevented almost completely" by the development of effective accident-prevention programs. It appeals to workers to use safe practices and to employers to provide proper materials and safety instruction for workers. Twelve general rules for erecting safe scaffolds are given with diagrams showing good and bad types of wood. The lessons are driven home by means of a series of photographs of different types of well-constructed scaffolds and another series illustrating violations of all the safety rules. The photographs were taken by inspectors of the Associations in the course of their work.

Recommended practice of industrial lighting

Recommended Practice of Industrial Lighting is the title of a booklet recently published by the Department of Labour in co-operation with the Canadian Engineering Standards Association.* It is a reprint of a publication prepared by the Illuminating Engineering Society in the United States and issued under the title *American Recommended Practice of Industrial Lighting.* The standards have been approved by the American Standards Association and the Canadian Engineering Standards Association and endorsed by the Canadian Region of the Illuminating Engineering Society. The publication was also reprinted by the Division of Labour Standards of the United States Department of Labour under the title *Industrial Hygiene and Plant Efficiency through Good Lighting.* (L.G., 1943, p. 1072).

"Inadequate illumination" states the Deputy Minister of Labour in the preface to the Canadian edition, "results in fatigue, ill health, accidents, spoilage of material and poor production records". The many advantages of good illumination are pointed out in the pamphlet. They include greater accuracy of workmanship, better utilization of floor-space, more easily-maintained plant cleanliness, less eye strain and improved morale. In the long run these mean increased production and decreased costs.

Detailed minimum standards for both natural and artificial lighting are laid down for various types of factories. For tasks involving discrimination of extremely fine detail under conditions of poor contrast illumination above 100 footcandles is recommended. For similar work where there is a fair degree of contrast illumination levels should be between 50 and 100 footcandles. The manufacture of shoes requires from 10 to 50 footcandles depending on the operation. Canneries and meat packing establishments need 20 footcandles and leather manufacturing from 5 to 30. Office work calls for illumination varying from 25 to 50 footcandles but higher intensities are recommended for operators of business machines.

Attention is also drawn to factors affecting the quality of the lighting. These include the diffusion and direction of light, colour of surroundings, contrasts, glare and shadows. The importance of adequate maintenance of lighting equipment and safe electrical wiring is stressed. The pamphlet is illustrated with photographs of modern lighting systems in different types of factories.

Safeguarding women at work

An illustrated pamphlet of this title, issued by the Industrial Accident Prevention Associations of Ontario for the use of employers, gives specific methods of hair, eye and hand protection supplemented by photographs. Safe clothing, proper respirators and protective creams are described. Emphasis is laid on morale and health as important in safety, and also on the psychological factors involved in making women wear safe clothing and protective equipment.

Bursaries for secondary schools in New Zealand

The New Zealand Secondary Schools Bursaries Regulations of December 15 last, provide for a comprehensive scheme of bursaries to be tenable at any secondary school, combined school, technical high school or district high school approved for the purpose by the University of New Zealand.

The applicant must be under 18, must show that he would be obliged to live away from home in order to attend the nearest school giving the necessary courses, and must have attained a prescribed standard. A bursary-holder may not be employed during the school term except with the consent of the Director of Education.

The maximum amount which may be paid is 40 pounds sterling annually for two years.

* Department of Labour, Canada, *Recommended Practice of Industrial Lighting,* December, 1943. CESA Standard Z92-1943. Price 25 cents.

In addition to the cash payment, the grant of a bursary includes the right to free tuition.

The Director may cancel any bursary if the holder fails to attend school regularly, if he is guilty of any grave misconduct, if he fails to make satisfactory progress in his studies, or if after the end of the first year of the bursary, he still has not met university entrance requirements. However, when non-compliance results from illness or other circumstances beyond his control, the bursary need not be forfeited. The Director may reduce the value of the bursary if he feels that altered circumstances no longer necessitate financial assistance.

State sponsored course in labour relations

Following consultation between a committee of the New York State legislature and representatives of labour and industry and officials of Cornell University in February arrangements were completed for the establishment of a State-sponsored and controlled school of industrial and labour relations. A bill to provide formal ratification of the agreement was passed almost unanimously by the State Assembly and Senate on March 8, 1944. The Act states that:—

The school shall have for its objects and purposes the teaching and instruction of students concerning:—

(1) the history and development of industrial practices of employers and employees;

(2) the history and principles of sound industrial and labour relations;

(3) the rights and obligations of employers and of employees;

(4) the history and development of laws relating to industry and to labour; and

(5) all other phases of industrial, labour and public relations of employers and employees tending to promote unity and the welfare of the people of the state.

The school is the first of its kind in the United States. New York press reports indicate that it will not commence instructional work for another year, owing to the difficulty of obtaining a faculty of experienced and non-prejudiced instructors and professors.

Prevention of lead poisoning in industry

A pamphlet of the Division of Industrial Hygiene of the New York State Department of Labour describes the process of lead absorption and poisoning which may occur through inhalation, ingestion, or skin penetration. The method of diagnosis using occupational and clinical histories and the laboratory is indicated. Prevention is considered under the headings of reducing lead exposure, personal hygiene for lead workers, and adequate medical care.

The most effective means of reducing lead exposure is through good housekeeping which includes the daily washing or vacuum cleaning of all places where lead may accumulate by persons provided with suitable respiratory protection; special storage rooms for stocks of lead; confining lead working to limited parts of the plant where control measures can be concentrated. If lead processes are entirely enclosed and mechanized and wet processes used where possible, lead exposure will be lessened. All processes generating lead dust or fumes should be provided with properly designed local exhaust ventilation. Periodic air analysis should be a routine procedure.

Personal hygiene requires respiratory equipment where the worker is unavoidably exposed to high concentrations. Lockers, protective clothing and adequate washing facilities are also necessary.

The plant medical office should be thoroughly conversant with the industrial processes and should share responsibility for seeing that proper safe practices are employed. Periodic physical examinations should be given frequently to every lead worker as well as a pre-employment examination. The plant physician has an unusual opportunity for developing an educational program so that the workers can co-operate in preventing lead poisoning.

American safety standards

Standards and safety codes to protect the health and safety of industrial workers issued in 1943 by the American Standards Association deal with the permissible concentration in the air of certain toxic substances, the use of abrasive wheels, with hoisting apparatus, safety shoes and dust explosions.

The maximum concentrations considered allowable in all places of employment where the following substances are used are:—

(1) xylene—0·868 milligrams per litre of air (at 25C and 760 mm pressure);

(2) toluene—0·752 milligrams per litre of air (at 25C and 760 mm pressure) for exposures not exceeding 8 hours a day;

(3) metallic arsenic and arsenic trioxide—1·5 milligrams per 10 cubic metres of air (emergency standard);

(4) chromic acid or chromates—1 milligram per 10 cubic metres of air for exposures not exceeding 8 hours a day;

(5) mercury—1 milligram per 10 cubic metres of air;

(6) lead and its inorganic compounds—1·5 milligrams per 10 cubic metres of air.

Samples truly representative of the actual working conditions at the particular location must be taken for testing. They should be taken at the breathing level with special attention to locations near the source of these harmful vapours and in sufficient number to show up differences in concentrations during the working period.

Established for the use, care and protection of abrasive wheels are general operating rules, maximum safe operating speeds, specifications for protective hoods, flanges, chucks, and revolving cup guards, and rules for the proper storage, handling and mounting of wheels.

The standard relating to jacks applies to the construction and use of portable, manually-operated jacks and includes operating rules, design and construction. Similar rules are laid down for the safety of overhead, gantry and locomotive cranes, derricks, hoists, slings and chains.

Specifications are given for various types of protective footwear including safety-toe shoes, conductive shoes to dissipate static electricity accumulated in the body, non-sparking shoes and foundry shoes. The right type of shoes must be selected for the job.

The National Fire Codes for the Prevention of Dust Explosions have been approved as American Standards by the Association. They contain general precautions pertaining to construction, equipment and housekeeping, as well as detailed provision for each specific type of industry where the dust hazard prevails.

Enforcement of U.S. child labour law

The Children's Bureau of the United States Department of Labour has recently secured convictions against a number of employers for violating the child-labour provisions of the Fair Labour Standards Act. The Act fixes a minimum age of 16 for employment in industries engaged in inter-state commerce but permits 14- and 15-year-olds to work outside of school hours in certain non-manufacturing occupations. A minimum age of 18 is specified for occupations declared by the Chief of the Children's Bureau to be hazardous.

A seafood-packing establishment was fined $360 and placed on probation for two years when convicted of employing 26 children under 16 in heading shrimp. Twenty-two of the children were under 14, eleven under 12 and one was only eight. A fine of $1,000 was imposed on a furniture manufacturer who was employing 11 young persons under 18 in the operation of power-driven woodworking machines, a hazardous occupation. A company manufacturing industrial carbon products was fined $2,000 for employing 26 children under 16 in manufacturing occupations. Another company was found to be employing 15 children under 16 years of age in cutting spinach at hours when the State law required the children to be in school. The previous year a court order had been issued restraining this company from such violations of the Act. Each of the three defendants in the case was fined $50 for criminal contempt of the Court's order.

Building trades apprentices in Britain

A comprehensive scheme has been drafted by the Building Apprenticeship and Training Council, a body sponsored by the British Government to advise concerning the recruitment, education and training of young persons in the building industry. It is expected that the industry will be able to absorb all available apprentices for some years after the war.

The council recommends that all Joint Apprenticeship Committees, established under the National Apprenticeship Scheme for the Building Industry of 1943, should co-operate with the local and public authorities, the education authorities, and the Ministry of Labour and National Service operating in the district.

The apprenticeship agreement should be an enforceable contract at law. The apprentice, the guardian, the employer and one other, normally one acting on behalf of an Apprenticeship Committee, should all be parties to the agreement. Power should be given to the fourth party to supervise the training and to cancel the apprenticeship if the obligations of any party are not met.

Priority in selection should be given to boys from the Junior Technical Schools for Building in England or Wales, or from pre-apprenticeship Building Courses in Scotland. There should be compulsory technical education for apprentices under 18 years of age on one day or two evenings a week, with the employer making provision for the payment of school fees. The length of apprenticeship should be five years at least for those entering between 15 and 16 years of age with scaling down of this period according to the pre-apprenticeship training of those who enter at a higher age.

The Board of Education and the Scottish Education Department, the Council recommend, should encourage the further expansion of pre-employment education in building, and adequate instructors should be trained for this work.

Social Security and Reconstruction

Revised Proposals for Health Insurance in Canada

House of Commons Committee Considers New Plan of Contributions

NEW proposals in regard to the draft bill on health insurance at present being studied by the House of Commons Special Committee on Social Security were laid before the Committee on March 1 by the Hon. Ian Mackenzie, Minister of Pensions and National Health. The most important of the revisions suggested would change the basis on which the people of Canada participating in the health insurance plan would contribute to its cost. According to this proposal each adult would pay a basic rate of $12 a year, together with an income levy based on ability to pay.

Development of Plan

The original draft bill on health insurance for Canada was drawn up by the Advisory Committee on Health Insurance, under the chairmanship of Dr. J. J. Heagerty, Director of Public Health Services, and was presented to the House of Commons Committee on Social Security in March, 1943. The object of the bill was to make available for everyone, regardless of income, complete medical care, including the services of a doctor, consultant, specialist, surgeon, hospitalization, medicines and drugs, and dental and nursing services. This would be financed partly out of taxation and partly by the collection of health insurance contributions from the people of Canada (L.G., April, 1943, p. 433.). The scheme would be administered by the provinces, with the Dominion lending financial assistance.

During the 1943 session of Parliament the Committee on Social Security studied the draft bill and listened to briefs and proposals on the subject of health insurance from a large number of interested organizations, including various medical, dental, hospital and nursing bodies, and representatives of labour and agriculture. A total of 117 witnesses were heard. In July the Committee issued a report (L.G., August, 1943, p. 1082), approving the "general principles of health insurance" set forth in the bill, but indicating the need of further study and of discussions with the provinces. The Committee was reconstituted for the 1944 session of Parliament, and is continuing its studies. The Minister of Pensions and National Health has indicated that a Dominion-provincial conference is to be held before the health insurance proposals are submitted to Parliament for legislative enactment.

Methods of Meeting Cost of Plan

It is estimated that the annual cost of health insurance in Canada will be approximately $250,000,000, or about $21.60 per capita. Various proposals have been made as to the manner in which this amount is to be collected.

The plan laid down in the first draft bill was that each province participating would establish a health insurance fund to which contributions would be made by employers, employees, assessed persons,(1) the Provincial Government and the Dominion Government. If a wage earner was unable to pay his full contribution (estimated at 3 per cent of his income) his employer would contribute the difference. If an assessed person was unable to pay his full contribution the province would contribute the difference. It was estimated that it would be necessary for each adult to contribute $26 for himself and his adult dependents. It was considered that this amount, together with the Dominion's contribution, would be sufficient to provide medical care for all, including children under 16 years of age for whom no direct payment would be made by contributors.

The Hon. Mr. Mackenzie declared that various weaknesses in this plan of contributions had been revealed, some of which had to do with difficulties in the way of administration. These were due partly to the fact that, with a contribution as high as $26, adjustments would be required for the majority of contributors (the Census indicates that about 62 per cent of the wage earners in 1941 earned less than $950 per year).

(1) "Assessed persons" were defined as persons with an income from a source other than wages or who were indigent.

5553—2½

anticipated that certain difficulties would arise out of requiring contributions from employers.[2]

As a means of overcoming these weaknesses, the following new proposals, drawn up by a special inter-departmental committee, were suggested to the Committee by the Minister. Under the revised scheme:—

1. Every person would contribute to the health insurance fund of his province as follows:—

(*a*) An annual flat contribution of $12.

(If the person has dependents over 16 he is responsible for their contributions also; but the province may, if it so wishes, make abatements in the contribution of persons of low income.)

This annual flat contribution would be collected by the province.

(*b*) An amount based on the income of the person on the following basis:—

(i) For a single person, 3 per cent of his income over $660 per year provided that such contribution in no case shall exceed $30.

(ii) For a married person, 5 per cent his income over $1,200 per year provided that such contribution in no case shall exceed $50.

This contribution would be collected by the Dominion along with income tax.

2. The Dominion's contribution would comprise the difference between the per capita amount in the provincial health insurance fund for the provision of benefits and the estimated cost of providing benefits.

The Dominion would make a grant to each province on a per capita basis.

The following tables show the amounts that would be payable in contributions under the revised health insurance scheme by persons of various income levels:—

Single persons would pay the basic fee of $12 regardless of income, plus the following levies:—

Income	Income Levy	Total
$ 660 and under	.....	$12 00[3]
700	$ 1 20	13 20
800	4 20	16 20
900	7 20	19 20
1,000	10 20	22 20
1,100	13 20	25 20
1,200	16 20	28 20
1,300	19 20	31 20
1,400	22 20	34 20
1,500	25 20	37 20
1,600	28 20	40 20
1,660 and up	30 00	42 00

Married persons or those with one adult dependent pay basic fee of $24, plus following levies:—

$1,200 and under	.....	$24 00[3]
1,300	$ 5 00	29 00
1,400	10 00	34 00
1,500	15 00	39 00
1,600	20 00	44 00
1,700	25 00	49 00
1,800	30 00	54 00
1,900	35 00	59 00
2,000	40 00	64 00
2,100	45 00	69 00
2,200 and up	50 00	74 00

An alternate plan of a basic payment of $12 and the balance from the national revenue is among other proposals being discussed by the Committee.

Comparing the two draft bills, the Minister commented:—

"It is to be noted that, whereas in the original draft bill submitted to the Special Committee on Social Security provision was made for contribution from employers, employees, assessed persons, the Dominion and the provinces, the present draft bill provides for contribution by the people, by the Dominion and by the provinces, the contribution of the last named being confined to payment of the cost of administration and to compensation for abatements of contributions in the case of persons unable to contribute the $12 a year for themselves and their adult dependents.

Comparison with Other Plans

Touching on the development of the principles of health insurance in other countries the Minister made the following observations before the committee:—

"Health insurance was originally confined to employees; and in early health insurance plans the contributors were the employees and the employer. Later, the contributors became tripartite, including employee, employer and the state.

[2] In this connection the Minister declared: "In a health insurance plan which envisages complete coverage it would appear inadvisable to require a special contribution from employers, and in any event, the proposed employer's contribution, being limited to that portion of the employee's contribution, not within his financial capacity to pay, would, on the basis of the estimates presented, produce a comparatively small share of the cost and would on the whole fall on the small employer rather than the large corporations; the substantial portion of the employer's contribution presumed to come from farmers using unpaid labour with living allowances would likely meet with serious opposition and would be doubtful of collection in large part; and the provinces facing the greatest difficulty in financing health insurance would benefit least from an employer's contribution of the kind recommended in the draft Provincial Bill. It is also of importance that an employer's contribution of the type proposed adds directly to the costs of production and for this reason tends to discourage employment to some degree and to handicap Canada in international competition."

[3] Less an abatement allowed under provincial regulations because of inability to pay.

"In national health insurance plans, as in the present bill, the tendency is to finance the plan by contributions from all citizens and the state. This is the case in New Zealand, Norway and Sweden. In addition to contributions of citizens and state, Denmark and Finland require a contribution from the employer. It is considered by those best informed in the field of economics that contributions by the employer impose a burden upon industry by increasing the cost of production of goods, thereby making competition with similar industries in other countries more difficult. Contribution by the employer lends itself to low wages, a low standard of working conditions, poor health, poor physique and consequent dissatisfaction on the part both of the employer and the employee. Contributions by the state are a necessity, otherwise insurance measures fail for lack of financial support.

"It has been suggested that a completely free or non-contributory system should be adopted, but it is considered that such a system encourages the pauper mentality and may create a delusion that the public purse is bottomless thereby encouraging extravagance and maladministration. It is more consistent with the dignity and independence of man that he should purchase the necessities of life with his own money. Under a contributory system of health insurance, benefit becomes a right and not a charity. Moreover, the beneficiaries who are contributors feel a sense of responsibility in regard to the cost of services and administrative procedures."

The Minister outlined various other changes and additions that have been made in the original plan, and revealed that the draft bill now submitted is the seventh draft health insurance bill that has been drawn up.

In conclusion he outlined the anticipated benefits of the legislation as follows:—

"The new draft Bill makes provision for health insurance for everyone irrespective of income thereby bringing adequate medical care within the reach of all. It will protect families against the hazard of illness and offer protection to motherhood and childhood. It will encourage the eradication of tuberculosis and the venereal diseases and will help to reduce mental illness, the incidence of heart disease, arterial disease, kidney diseases, diabetes, cancer and diseases of middle life. It will help to extend public health services throughout the country—federal, provincial and local. It will enable the medical and other professions to attack the cause of sickness and death vigorously and effectively. I, therefore, submit it to you, Mr. Chairman, Mrs. Casselman and gentlemen, with confidence in the knowledge that it will provide Canada with an advanced form of preventive public health services and medical care that cannot but have a lasting effect in improving the health of the people of Canada."

Great Britain's Plan for a National Health Service

Scheme Would Provide Complete Medical Attention for All—Grouped Practice and Health Centres to be Encouraged

IN view of the consideration that is currently being given in this country to the subject of health insurance, subsequent to the Government's announcement of its intention to introduce such a scheme in Canada, the following summary of Great Britain's plan for a national health service is herewith presented. An outline of this plan was recently published by the British Ministry of Health (in collaboration with the Department of Health for Scotland) in the form of an official White Paper, which, while not giving the details of legislation such as will eventually be introduced, sets forth in a general way the Government's views on the subject and the proposals which it wishes to have "freely examined and discussed" prior to the introduction of actual legislation.

In stating the Government's intention of establishing "a comprehensive health service for everybody," the Paper declares that the Government wants to insure

> that in future every man and woman and child can rely on getting all the advice and treatment and care which they may need in matters of personal health; that what they get shall be the best medical and other facilities available; that their getting these shall not depend on whether they can pay for them, or on any other factor irrelevant to the real need—the real need being to bring the country's full resources to bear upon reducing ill-health and promoting good health in all its citizens.

A national health insurance scheme is at present in existence in Great Britain, and has been since 1912. Its coverage, however, is limited to employed persons earning under £420 a year (approximately $1,900) without including their wives, children and other dependents. For persons not covered by this scheme and who are in extreme need, assistance

is available under the older Poor Law; and for some particular groups there are other facilities. But for something like half the population, the service of a personal or family doctor "depends on what private arrangements any particular person can manage to make."

The extension of health protection to the entire population will involve putting the care of personal health "on a new footing" and making it available as a "publicly sponsored service." The Paper declares:—

> Just as people are accustomed to look to public organization for essential facilities like a clean and safe water supply or good highways, accepting these as things which the community combines to provide for the benefit of the individual without distinction of section or group, so they should now be able to look for proper facilities for the care of their personal health to a publicly organized service available to all who want to use it—a service for which all would be paying as taxpayers and ratepayers and contributors to some national scheme of social insurance.

The reference to "some national scheme of social insurance" indicates that the plan for a national health service is merely one aspect of the unified program of social security which is eventually to be introduced in Great Britain along the lines of the Report of Sir William Beveridge.

Scope of Benefits to be Provided

The service is intended to cover "all necessary forms of health care". It is admitted, however, that for a certain time there will be difficulty in providing certain of the benefits. For instance there are not yet enough dentists to provide complete coverage of the population (the same situations exists in Canada); and so it is planned to give priority to the needs of children and young people and of expectant and nursing mothers. Similar difficulty is anticipated in regard to eye treatment. The general aim, however, is to provide:—

> a comprehensive service covering every branch of medical and allied activity, from the care of minor ailments to major medicine and surgery; to include the care of mental as well as physical health, and all specialist services, e.g. for tuberculosis, cancer, infectious diseases, maternity, fracture and orthopaedic treatment, and others; to include all normal general services, e.g. the family doctor, midwife and nurse, the care of the teeth and of the eyes, the day-to-day care of the child; and to include all necessary drugs and medicines and a wide range of appliances.

The benefits proposed in the Canadian plan are of a similar broad scope.

Relationship between Doctor and Patient

The Government considers that the "front line of the service" for everyone in a national health scheme is the personal or family doctor, available for consultation on all problems of health and sickness.

> The aim of the service will be to provide every person, or better still every family, with a personal or family practitioner who will be able to become familiar with the circumstances of those in his care—in the home and at work. It is to be hoped that doctor and patient will not wait always till the latter falls ill and urgently requires treatment. The doctor must try, in short, to become the general adviser in all matters concerned with health (no less than with disease) on which a doctor is so well qualified to advise. This means a changed outlook in much of present medical practice a change that has long been wanted and advocated by most doctors themselves and for which they more than anyone have desired the opportunity.

People will be free to "choose for themselves the doctor from whom they wish to seek their medical advice and treatment, and to change to another doctor if they so wish"; and doctors also are to have freedom in their choice of patient.

Recognizing that "the practice of medicine is an individual and personal art, impatient of regimentation", the Paper recommends a further freedom for the doctors: that they "remain free to direct their clinical knowledge and personal skill for the benefit of their patients in the way which they feel to be best."

Grouped Practice

In this connection, however, the Paper envisages a tendency away from the traditional method of practice, whereby a doctor works as an individual, towards the more modern method of grouped practice and teamwork.

> "The days when a doctor armed only with his stethoscope and his drugs could offer a fairly complete medical service are gone. He cannot now be all-sufficient. For efficient work he must have at his disposal modern facilities for diagnosis and treatment, and often these cannot be provided by a private individual or installed in a private surgery. He must also have easy and convenient access to consultant and specialist opinion, whether at hospital or elsewhere, and he must have opportunities of real collaboration with consultants. Facilities such as these are inadequate at the present time. There must also be close collaboration amongst local general practitioners themselves, for their different interests and experience can be of value to each other.*

The tendency, the Paper continues, will be towards a bigger element of grouped practice and teamwork—"in which the individual doctor retains his personal link with the patient, but has at his side the pooled ability of a group of colleagues as well as consultant and hospital services behind him. . . . The

---

* Quoted in the Paper from a Report of the Medical Planning Commission (organized by the British Medical Association).

Government fully agree that 'grouped' practices, to which numerous privately arranged partnerships are pointing the way, must have a high place in the planning of the new service, and they are designing the service with this constantly in view."

The advantages of the group system can be most fully realized, the Government considers, in the idea of the "Health Centre." Such centres consist of specially designed and equipped premises where a group of doctors can collaborate and share up-to-date resources.

> Broadly, the design should provide for individual consulting rooms, for reception and waiting rooms, for simple laboratory work, for nursing and secretarial staff, telephone services and other accessories, as well as—in varying degree according to circumstances—recovery and rest rooms, dark rooms, facilities for minor surgery, and other ancillaries. The object will be to provide the doctors with first-class premises and equipment and assistance and so give them the best facilities for meeting their patients' needs. The doctors will thus be freed from the necessity to provide these things at their own cost. They will join in something like the partnership groups already often privately formed, and there will be new scope for the young doctor, fresh from hospital training, to take his share in the Centre as an assistant to the practitioners engaged there, and then, later on, to be eligible for full participation.

The Government believes, however, that the conception of grouped practices cannot represent the whole shape of the future service; and that separate practice will continue to exist.

> Grouped practices are more likely to be found suitable in densely populated and highly built-up areas and it is there particularly (though not exclusively) that they should first be tried. It will then be possible to watch the development, with the medical profession, and to decide in the light of experience how far and how fast a change over to the new form of practice can and should be made.

Method of Payment of Doctors

With the advent of the new health service, patients will receive treatment free of charge, with the doctors receiving their remuneration from the public funds. The method of remuneration is, the paper points out, "a highly controversial question, on which opinions are sharply divided." Some doctors hold that "if they became the salaried servants, whether of the state or of local authorities, they would lose their professional freedom and be fettered in the exercise of their individual skill;" these doctors advocate a system of payment on a capitation basis, whereby the doctor's remuneration would depend on the number of patients whose care he undertakes. Other doctors "would welcome a salaried service, believing that it would relieve them from business anxieties and enable them to devote themselves more freely to the practice of their profession."

The Government has "approached the question solely from the point of view of what is needed to make the new service efficient." It considers that doctors in individual practices would receive their remuneration for the most part on a capitation basis; although in some cases, such as doctors working in sparsely populated areas, payment could be on a salaried or similar basis if the doctor so desired. In regard to group practice, however, "it seems fundamental that inside a Centre the grouped doctors should not be in financial competition for patients;" and that "all the practical advantages of the Centre—the use of nursing and secretarial staff, record-keeping, equipment, the availability of young assistant doctors in particular should be, under a system of a salaried team, at the disposal of the group in whatever way they like collectively to arrange."

Administration

In planning the introduction of legislation on health matters, the British Government is not limited in its powers, as is the Federal Government in Canada. (In presenting the Canadian draft bill on health insurance to the House of Commons Committee on Social Security last year, the Minister of Pensions and National Health expressed the opinion that due to limitations in the Canadian constitution it would be necessary to turn over administration of health insurance to the provinces, with the Dominion providing financial assistance.—L.G., 1943, p. 434.)

For the administration of the British plan, the Paper envisages a combination of central and local responsibility, "to ensure that both general national requirements and varying local requirements are met."

Central responsibility to Parliament and the people will lie with the Minister of Health. The Minister will be assisted by a consultative organization representing medical, hospital and other professional interests, which will advise him on such technical questions as are referred to it or which it wishes to bring to his attention, and which will also assist him in drawing up regulations. There will also be a central executive body, composed in the main of members of the medical profession. This will be the "employer" body with which the general practitioner enters into contract in the new service and from which he receives his remuneration; and it will also concern itself with the distribution and welfare of doctors and assistants.

Local organization will be on an area basis; with areas of suitable size and resources for

the operation of a full hospital and specialist service within its boundaries to be mapped out by the Minister in consultation with local interests. For each of these areas a "joint authority" is to be constituted from the various local government organizations within the district, to be assisted by a local technical advisory body.

Inaugurating the Health Service

In bringing the new health service into existence, the Paper states, the first step will be for each local joint authority to work out a detailed plan for its area, determining what is needed for the people within the area. The plan will use, adapt, and where necessary supplement existing resources.

> The plan must ensure that the various special treatments are concentrated in centres competent and convenient to provide them, and not dispersed haphazard in uneconomic and overlapping units; that proper linking of services is secured by relating the work of special and general hospitals; that arrangements are at hand for the transfer of patients to the hospitals best suited to their medical needs; and that the skill of the consultant staffs of the various hospitals taking part can be used to the maximum advantage of the area as a whole.
>
> It will be the aim of the authority to make its area (which will have been determined with this in view) as self-sufficient as possible in hospital and consultant services. But where it is obviously more sensible, as in some of the rarer services, the plan will provide for certain services by agreed arrangements outside the area.

The plan will then be submitted to the Minister, who will consider it from the outlook of the country as a whole and the effect of local plans one upon another. Having received his approval, with or without amendments, the plan becomes operative; but may be modified from time to time, according to requirements, by the same procedure.

Financial Provisions

The total annual cost of the service, to come out of public funds, is estimated at about £148,000,000 ($656,000,000). Of this about 36 per cent would be provided by local taxation, about the same amount from central taxation, and the remainder would be set aside out of contributions under the broad social insurance scheme proposed in the Beveridge Report. The per capita cost works out at about $15.86.

Throughout the Paper, emphasis is laid on the evolutionary nature of the scheme—wherever possible existing facilities are to be employed, and extended. Doctors and patients are stated to be at liberty to participate in the scheme or not, as they see fit; but the service is to be so designed that it will be looked upon as the normal method by which people get all the advice and help they want. No one, the Paper adds, must "have reason to believe that he can obtain more skilled treatment by obtaining it privately than by seeking it within the new service."

Employment Opportunities in Post-war Canada

Recommendations of Committee as to Job Placement and Training Facilities

RECOMMENDATIONS on general economic policy to promote full employment and production in post-war Canada, made to the Government by the Advisory Committee on Reconstruction, were summarized in the February issue of the LABOUR GAZETTE (p. 150). The Report of the Committee was supplemented by various other studies, including the reports of six subcommittees appointed to examine special aspects of the post-war situation. One of these documents, the Report of the Subcommittee on Post-war Employment Opportunities[1] is herewith summarized in brief.

This subcommittee, whose first chairman was Mr. Tom Moore (later succeeded by Mr. Mr. Percy N. Bengough), proceeded on the assumption that, in line with the program proposed by the main committee, full employment is the basic objective for Canada during the post-war period. Its concern was with the facilities required to ensure the best use of the employment opportunities that will be available. Its studies were thus concentrated on information and placement functions, including the role of the employment service, and on training provisions of all types.

These functions, the subcommittee's report states, will be of urgent importance in the immediate post-war period when, "apart altogether from men demobilized from the armed forces, upwards of a million civilian workers will make some form of occupational transference"; but the problems have longer-range aspects also, which are "coloured by the determinatioin to do a better job of making

[1] Advisory Committee on Reconstruction: Post-war Employment Opportunities, King's Printer, Ottawa, 25 cents.

the fullest use of our human resources than we have in the past." The proposals of the committee are thus particularly directed towards meeting the needs of the difficult transition period, but they also indicate the type of job placement and training services considered necessary for Canada's future welfare.

Employment Service

The first of the problems, that of placing people in jobs, has as its major requirement "the development of machinery operating throughout the Dominion of Canada, by means of which unemployed individuals in any part of the country may be made aware of appropriate employment opportunities in any other part of the country."

The basis of this machinery is already in existence, in the Dominion Employment Service, with its network of local employment offices across the country. The service is at present bearing the brunt of a large part of the work of National Selective Service, including the administration of the various manpower mobilization orders. Valuable experience has been gained under heavy war pressures, and "the employment offices should be much better equipped than ever before to play their basic part in the redirection of workers who have to find new jobs in the peacetime economy." However, the committee considers that to fit it for its role in post-war adjustment a number of modifications and improvements of the Employment Service will be necessary.

Exclusive Jurisdiction

The committee declares that it is essential for efficiency that the vast program of job placement be co-ordinated through one nation-wide organization. At the present time, the report points out, there is no authority to prevent provinces from operating dual employment services or from granting privileges to private fee-charging agencies. It is felt that "exclusive jurisdiction should be secured for the Dominion Employment Service; if necessary by appropriate amendment to the British North America Act."

Functions

"It is necessary", the report continues, "to strengthen, and in some directions to add to the specific functions of the Exchanges." Five types of service, some of which are already in effect, are listed as follows:

1. *Placement.*—The fundamental function of offices of the Employment Service is to bring workers and jobs together, and to fit workers to jobs.

2. *Information services.*—Statistical information on demand and supply conditions must be available as a basis for broad planning to meet present and future labour requirements of industry and agriculture. Such information will be required so that "the magnitude and the direction of necessary labour transfers can be reasonably anticipated." An inventory of manpower (with a proper recording of skill, qualifications, past experience, fitness for work, etc.), and an inventory of jobs (including not merely registration but appropriate descriptions of jobs available) should also be maintained.

Placement and the gathering of essential information "are the basic functions which must be performed whatever else is done by an Employment Service." The report comments:

> Each one is capable of a great deal of elaboration; it may be done efficiently and systematically, or indifferently with no specialization or constructive service at all. But over and above these, there are other potential functions, whose development makes all the difference between the Exchange as a routine office for the registration of the unemployed and the notification of rather inferior jobs, and a national key service, which is the focus for all the constructive measures which make for the really organized labour market.

The remaining suggested functions are as follows:

3. *Training Courses and Classes.*—The Employment Service should keep informed upon the needs for skilled workers in various industries and occupations. Existing training plans should be kept constantly under appraisal, so that officials of the Service will have adequate information available for those who use the Service.

4. *Vocational Counselling.*—The committee considers that owing to the individual nature of vocational guidance "it is probably too much to hope" for nation-wide counselling organized through the Employment Service. It urges, however, that the utmost provision should be made for advice on the relation of types of education and training to particular jobs, counsel on vocational aptitudes and inclinations in general, and information on occupational and labour market opportunities; and that the necessary personnel, time and facilities be provided in local offices.

5. *Liaison Work with Various Groups in the Community.*—The Employment Service, in the subcommittee's opinion, should become the means of liaison with all kinds of groups who are concerned with placement work, including:

> Wage-earners and other workers who are the chief beneficiaries if it functions efficiently; with industry, not only as a source of employment but a source of needed technical information; with schools; with the federal and provincial training program, on very close

terms of co-operation indeed if training is to be properly tied in with placement, as it must with special agencies such as the Re-establishment Branch for demobilized members of the forces; and with public-spirited citizens in every community.

"This will not be achieved overnight or through one single line of attack", the committee comments.

The presently existing regional and local advisory employment committees are considered to represent a step in the right direction, and further development of these committees is recommended. The interest of the joint production councils or employee-management committees in various war industries should also be sought, as a means of bringing to the Service information on post-war employment and training plans; and in addition, co-operation should be maintained with government departments charged with the responsibility for demobilization.

"The above recommendations", the report declares, "presuppose in all branches of the Employment Service a professionally trained administrative personnel in sufficient numbers to cope with the intricate problems of an effective service."

Education and Job Training

The committee underlines the importance of maintaining an adequate supply of trained workers by pointing out that the further employment of unskilled workers depends on there being a sufficient number of technicians and skilled men. Thus a shortage of skilled workers would hamper Canada's chances of realizing full employment.

The report emphasizes that the proper context in which to consider purely vocational or technical training is the educational system of the country as a whole.

Less than one per cent of the country's youth receive any university education, the report states, and of those who do, only a limited number receive specialized preparation for professions and related occupations. Some 17-20 per cent go to high school, it is estimated, and another 5-6 per cent to technical schools. Of the remainder, a large group add to their elementary school education or their vocational training through business colleges, correspondence schools, part-time classes, regular apprenticeship, skills picked up unsystematically "on the job"; and more recently, through the classes and courses of the Youth Training Program, which has now been greatly extended to include all kinds of industrial training under the War Emergency Training Act, but which has not necessarily served to complete a logical system for the recruitment of Canadian industry.

The committee concludes that:

> the facilities for technical education and other instruction of a vocational type are varied and uneven, and not co-ordinated into logical relation with other secondary educational facilities (to say nothing of their inadequate links with industries, the Employment Service, etc.).

The committee considers that technical and vocational education should be accorded equal status with high school or academic education. Among the contributory factors to the present inferior position accorded the technical education, the committee deplores "the widely prevalent practice of employers of using matriculation as the criterion of a completed secondary education and of relating it to wage scales, promotions, etc.," and suggests that this is a matter for the re-education of the public. Secondary education would be so planned as to accord equal value to technical and scholastic aptitudes, and should also recognize the signal necessity of catering for a majority of pupils who will not go on to university. Industrial employment would become more attractive in comparison with "white-collar" occupations than it at present appears to the youth choosing a career, if it offered greater security and regularity.

It is recommended that more facilities be provided in schools to permit educational and vocational guidance.

> The needs of the future will be such that courses of study in the schools should be dovetailed to the needs of industry, including the construction trades, rather than to courses tending to lead to an academic education. Test periods could also be provided for students in their school holidays, which would give them a chanace to discover their aptitudes and encourage interest in industrial skill as a means of future employment.

"In general there should be more uniformity in the standards of technical education throughout Canada," the report maintains. Standards for a particular level of skill in various trades should be determined, and recognized by schools in the various provinces. Federal aid to provinces in regard to technical education should be combined with federal participation in the raising of standards.

Apprenticeship

In urging a greater development of apprenticeship in Canada, the committee points out that "present apprenticeship facilities are limited and uneven in character and vary considerably from province to province." The

---

[1] A recent order in council, authorizing the federal Department of Labour to assist provinces in setting up apprenticeship programs, was issued subsequent to the submission to the Government of the Report on Employment Opportunities. (L.G., Feb., 1944, p. 206.)

informal conditions of apprenticeship in this country have

> encouraged a considerable number of young men to work in construction trades without going through the burdensome requirements of formal apprenticeship. Working a few years as handymen, these men picked up knowledge in one or the other construction trades and then succeeded in getting recognition as skilled men by entering locals of trade unions. It is known that some locals of trade unions are less stringent in the examination of skill than other locals of the same trade union.

The depression of the thirties, causing unemployment even among skilled workers, discouraged youths from undertaking training. A further bad effect has resulted from war demands, which have caused dilution of the skilled labour force by necessitating that skilled construction work be performed by semi-skilled men and youths. A form of "senior apprenticeship" for training these persons up to acceptable standards is recommended for the post-war period.

Dominion-Provincial Training Programs

The report outlines the types of training at present being given under the Dominion-provincial war emergency program, including pre-employment training, part-time training, plant training, training of supervisors, and training of foremen. The experience gained in these types of training, in such matters as course organizations, job analysis, foremanship and co-operation between training authorities and employers generally, should be of tremendous value if adapted and utilized in the post-war organization of apprenticeship and other training, it is considered. Wartime training schemes of the pre-employment type, however, are considered to give at present only the "minimum of initial skill to enable trainees to undertake specific industrial operations," and should be supplemented by the provision of "more adequate vocational guidance service," and by being co-ordinated with "properly regulated training and apprenticeship systems."

Training and Unemployment Insurance

"For many categories of workers the proper requisite in the event of unemployment is not maintenance in idleness, or even employment on works projects, but training", the report states. "Attendance at courses of instruction is already written into the Canadian Unemployment Insurance Act as one of the statutory conditions for the receipt of benefit; it would obviously be even more relevant for workers who have exhausted their benefit rights, or who for other reasons apply for unemployment assistance.

"In any case, training should be brought into operation for all unskilled workers, particularly if they are still young, as soon as they show lengthy unemployment records (if they do not apply for training voluntarily); for an improvement in what they have to offer an employer is their only hope, in normal times, of getting better paid or more regular work. . . . .

"Special vocational instruction and placement arrangements are already being organized for war casualties. There is no reason why similar provisions for physically handicapped civilian workers should not be extended on a national basis; and this will in fact be specifically desirable in the advent of a disability pensions scheme."

Demobilization Perspective

"Fortunately", the report states, "Canada starts off with certain assets in this field. The enhanced range of pre-employment classes, accelerated teaching for skilled men in the armed services, supervisory training schemes, spare-time vocational education courses, can be examined for adaptation to post-war use. The rehabilitation machinery (under P.C. 7633) provides a strong framework for men who wish to extend their training or education after demobilization. Above all, the Vocational Training Co-ordination Act provides a basis and an opportunity for a co-operative program of courses and projects on a national scale, if its facilities get the response they deserve." But the pressure on technical schools of all kinds has been very heavy as a result of war needs. They are in danger of being strained beyond the limit of their resources at the end of the war in attempting to provide training for demobilized members of the armed forces and for former war workers who will need new skills, the committee anticipates. Post-war development should be further considered, because a full program "would also extend to the training needs for new and specifically post-war projects, such as housing programs, conservation measures, rural rehabilitation through the development of small industries, and other matters."

Manpower

Compliance with Mobilization Regulations

Survey Required of All Employers of Male Employees—Other Manpower Orders

AN order requiring all employers of male employees to make an examination of the documents of their employees, and forward advice on those who fail to produce documents showing good standing under Mobilization Regulations, was issued on January 28. This examination must be completed by May 1, 1944. "Employer" includes industrial and commercial employers, farm operators, and also His Majesty in the right of Canada or of any province.

A booklet, "Employers' Guide", has been sent to industrial and commercial employers. A return post card has gone to farm operators. Obligation to make the examination rests on each and every employer of male persons. Penalties are provided for failure to carry out this examination, and for male employees failing to assist by refusal to produce documents (L.G., Jan., 1944, p. 10).

Compliance of Applicants for Unemployment Insurance Benefit with Mobilization Regulations

In future male applicants for unemployment insurance benefit will be required to present proof that they have complied with National Selective Service Mobilization Regulations, Hon. Humphrey Mitchell, Minister of Labour, announced recently.

By an Order in Council passed on March 30 (P.C. 2222) every male applicant will have to produce satisfactory evidence, such as a birth or marriage certificate that he is not a "designated man" under the military call-up—or, if he be a designated man, he must present the necessary documents to show that he has complied with Mobilization Regulations.

The provisions of the Order are an extension of the present nationwide check-up, described above, on all civilian men of military age who are subject to the regulations. Similar proof of compliance has for some time been required of men seeking employment through an office of National Selective Service.

Terms of Employment of Alternative Service Workers Amended

Provisions made for the employment of conscientious objectors and others required to perform "alternative service" under Part IIA of National Selective Service Regulations are amended by a recent Order in Council (P.C. 1977, March 20, 1944). The Order relates to the conditions under which leave of absence may be granted to alternative service workers, and to the amount payable out of workers' wages as an allowance for the maintenance of dependents of the employee or for hospital, dental or medical services rendered the employee. (The amount of remuneration that alternative service workers may receive is limited under Part IIA of the Regulations. Employers, however, must pay the going rate of wages for the job. If the wage rate exceeds the amount of money the workers are entitled to receive, the excess amount is paid to the Red Cross Society.)

Payment of Prisoners and Internees

An Order in Council of March 16 (P.C. 1780) deals with the payment of daily cash awards to prisoners of war and internees employed on works projects within the camp area. It provides that the allowance of such workers shall be raised from twenty to fifty cents (payable in "token money", good for the purchase of articles stocked in the camp canteen). Hours of work are increased from four to eight per day. This is the same amount as is paid to prisoners employed on works projects carried on outside the camp area and administered by the Department of Labour under authority of Order in Council P.C. 2326, dated 10 May, 1943 (L.G., June, 1943, p. 741).

Revision of Mobilization Regulations

Postponements for Essential Workers—Call-up of Married Men Not Supporting Wife or Children

AN Order in Council of March 4, 1944 (P.C. 1355) revises and consolidates the National Selective Service Mobilization Regulations. The last previous consolidation of the Regulations was made by P.C. 10924 of December 1, 1942, at the time that the military call-up was transferred from the Department of National War Services to the Department of Labour. In addition to including amendments made to the Regulations from time to time since December 1, 1942, previously announced, the present revision makes some changes, both in policy and procedure.

The age classes in which men are subject to call for military training have not been altered. However, in future a married man not supporting his wife or children or not making a reasonable contribution to their support, becomes liable to call in the same manner as single men. Since all married men born in the year 1913 or later are already designated for military service, the new provision applies only to certain married men born in any of the years 1906 to 1912, inclusive.

The Director of National Selective Service, Mr. Arthur MacNamara, explained that it was not the intention to call up a married man simply because his wife is in employment even where she maintains herself or contributes to the maintenance of their household. Rather will determination to call a man be made on the basis of husband and wife being separated, when the husband does not provide support, although, Mr. MacNamara added, even where husbands of working wives must live away from home, the husbands will not be called up where husband and wife are not separated.

Postponements for Essential Workers

A provision that postponement of military training may now be given until further notice, will assist essential industries and reduce the work of the Mobilization Boards. Previously, only coal miners and farm workers could secure unlimited postponement, with the result that Boards periodically had to review all other postponements, even though it could be foreseen that the circumstances would warrant an indefinite postponement.

The section of the Regulations making this provision is as follows:—

> Sec. 9.(8) Where a man is engaged in an essential industry, coal or base metal mining, fishing, lumbering, seafaring or railroad transportation, on a public utility or in an occupation which the Minister has declared to be a seasonal occupation or one essential to the prosecution of the war or in the national interest, the Board may grant him a postponement order for a limited or unlimited time and in so doing shall take into account the supply of labour available, the importance of the particular applicant's position in the industry or occupation and the importance of the industry or occupation to the national economy and the prosecution of the war.

The Regulations continue also to provide for the deferment of persons employed in agriculture.

Other Provisions

Up to this time a man found medically unfit, but who after remedial treatment would probably be medically fit for service, was offered treatment on his promise to join the Forces after being treated. Now a man must agree to join up first before being given remedial medical treatment.

No special provision existed in the older Regulations to deal with the cases of certain men either in remote areas, or where medical examination is not feasible. Authority is now given to grant postponement without medical examination to seamen serving in the Merchant Marine. Also, Indians and others living in remote areas may now be postponed, if reasons exist, without first undergoing medical examination. Conscientious objectors may be dealt with in future, without first being medically examined.

The new Regulations, for the first time, give the military authorities power to hold a man who has been convicted in court of failure to report for military training under the regulations. Such a man may now be held either in police or military custody. Previously, the man had to be served with a formal notice in addition to being convicted in court, and a court order that he report for military service, after his civil trial, or even after a prison term, did not have automatic effect: this situation is now reversed.

Amendments to the Wartime Wages Control Order, 1943

Statement of the Prime Minister—Explanation of the Changes

ON March 13, 1944, the Right Hon. W. L. Mackenzie King, the Prime Minister, tabled in the House of Commons copies of Order in Council P.C. 1727, enacted on the same day. This Order in Council makes effective changes in the Wartime Wages Control Order, 1943 (as enacted by P.C. 9384 of December 9, 1943). The changes are as follows:—

(*a*) The revised Order reinstates the provision for the three-man National War Labour Board, with one member representative of the point of view of labour and another of that of employers.

(*b*) The order of December 9, 1943, had placed upon the employer or employee, charged with certain offences under the regulations, the onus of proving that his alleged action was not in contravention of the order. This provision has now been revoked. In future prosecutions under the order the usual court rules as to evidence and proof will apply.

(*c*) In December last the National Board was instructed to review decisions of the nine Regional War Labour Boards, and was given authority to revise these decisions where it thought fit. While this authority is continued in the present amendments (being explained as necessary to secure uniformity and consistent administration across Canada) it is now made subject to the provision that the National Board shall not vary decisions of a Regional Board without giving notice to interested parties, who will have the right to make representations to the Board before changes are made.

(*d*) The Boards retain authority to direct wage increases in cases where special circumstances exist. Under the provisions in the order now changed, a Board could not grant an increase if it were found that such proposed increase was not consistent with the ability of the employer to meet the cost without increasing the price of his product or services. This restriction has been removed, although in dealing with applications for wage increases, Boards are required to take evidence on the employer's representations where he says he cannot afford to pay more.

(*e*) A new feature, in reference to upward revision of wage rates, is that the National Board may now authorize increases in wage rates to the extent that any cost-of-living bonus and wage increase already granted since August, 1939, have not yielded the employees as much as the full standard cost-of-living bonus, subject to the Board considering such action fair and reasonable. (For this purpose bonus is to be computed on the same basis as provided in earlier orders.)

(*f*) Where it has been customary to fix the wage rates of railway employees in international railway train service in Canada in relation to rates paid outside Canada to similar employees, the National Board may adjust such rates to maintain the relationship with the outside rates. This maintains an established practice of long standing, which had been included in earlier orders.

When tabling the amending order, P.C. 1727, in the House of Commons, the Prime Minister spoke as follows:—

"Mr. Speaker, I wish to make a statement to the house with respect to amendments to the Wartime Wages Control Order, P.C. 9384, of December 9, 1943.

"On February 10, I informed hon. members that it was the intention of the government, after receiving representation from the leading labour organizations, and considering all other representations, to make amendments to the Wartime Wages Control Order, (P.C. 9384 of December 9, 1943). I now table a copy of Order in Council P.C. 1727 which embodies the amendments. It was enacted to-day.

"The amendments seek to meet the criticisms of the original order, as far as is consistent with the maintenance of the government's policy of preventing inflation."

* * * *

Here the Prime Minister referred briefly to some of the more important changes now made. Then, continuing:

"I would not be frank with hon. members or with labour if I did not say that in making these amendments to the order, the government recognizes the risks involved in relation to the whole stabilization policy.

"No part of the community has more to gain from continuing success in the battle against inflation than labour, or more to lose by failure to prevent inflation. The government realizes that the fight against inflation can be won only

if all groups in the community are prepared to give their active support and co-operation to the price ceiling policy.

"If the government's policy of price stabilization is to be effectively maintained, it is clear that employers and labour organizations must co-operate in supporting this policy by limiting applications for wage increases to what should be a relatively small number of cases where special circumstances apply.

"The government is not prepared to adopt a policy of paying subsidies to employers to meet the higher costs resulting from increased wage rates. An attempt to follow this course would soon break down because of the administrative difficulties involved. Similarly, the granting of price increases to offset increased wage rates, if the cases involved were to reach any considerable number, would confront the Wartime Prices and Trade Board with an impossible task, and would destroy the price ceiling.

"In December last, when I announced the principles underlying the Wartime Wages Control Order, I said:

> The policy of the government is that all practical measures will be taken to keep the cost of living at present levels.

"I went on to say:

> If the cost of living rises more than three per cent and remains at that level for two consecutive months, the government will review the whole program of price control and wage control and take appropriate action.

"The government will endeavour to keep the cost of living from rising more than the three per cent mentioned. We shall stand by the pledge that if the cost of living exceeds the level of October, 1943, by more than three per cent and remains at such higher figure for two consecutive months, the government will review the whole program. I must emphasize however, that if, under the amended order, the cases of wage adjustments which result in increases in the cost of goods and services should prove to be too numerous, the margin of three per cent would soon be exhausted. The government would then be be faced with the unfortunate task of having to review, and to consider the practicability of continuing, the whole stabilization policy.

"Let me repeat: the government is determined to do all it can to hold down the cost of living, and to safeguard the public against an inflationary rise in prices. In this it cannot, however, succeed without the support of every group in the community."

Text of Order in Council amending the Wartime Wages Control Order 1943

P.C. 1727

AT THE GOVERNMENT HOUSE
AT OTTAWA

MONDAY, the 13th day of March, 1944.

PRESENT:

HIS EXCELLENCY
THE GOVERNOR GENERAL IN COUNCIL:

His Excellency the Governor General in Council, on the recommendation of the Minister of Labour (concurred in by the Minister of Finance) and under and by virtue of the powers conferred by the War Measures Act and otherwise, is pleased to amend The Wartime Wages Control Order, 1943 (P.C. 9384 of December 9, 1943) and it is hereby amended as follows:—

1. Subsections (1), (2), (5) and (6) of Section 2 are rescinded and the following substituted therefor:

"(1) There shall be a National War Labour Board (hereinafter referred to as the National Board) consisting of Mr. Justice C. P. McTague, Toronto, Ontario; Mr. Leon Lalande, Montreal, Quebec; and Mr. J. A. Bell, Toronto, Ontario."

"(2) Mr. Justice C. P. McTague shall be the Chairman of the National Board."

"(5) A majority of the members of the National Board shall constitute a quorum."

"(6) A decision of the majority of the members of the National Board present and constituting a quorum shall be a decision of the Board and in the event of a tie the Chairman shall have a casting vote."

2. Section 10 is rescinded and the following substituted therefor:

"10. (1) In order to provide for uniformity in the administration of this Order throughout Canada and to avoid dissatisfaction which would otherwise result from the issue of inconsistent directions by Regional Boards, the National Board shall arrange for the review of every decision or direction of each Regional Board, and if in the opinion of the National Board any such decision or direction is not in accordance with the purposes or provisions of this Order, the National Board may of its own initiative, after giving notice to the parties concerned and giving them an opportunity to submit further representations, vary or revoke any such decision or direction and in doing so shall advise the Regional Board of its reasons therefor.

(2) Whereon a review under the powers conferred by this section the National Board varies or revokes any decision or direction of a Regional Board, the decision or direction of the National Board shall be effective only from the date of the making thereof."

3. Section 20 is rescinded and the following substituted therefor:

"20. (1) The National Board may

(*a*) authorize or direct an employer to increase a single wage rate or the rates within a range established by him under this Order for an occupational classification of his employees only if

and to the extent that the National Board finds that such increased rate or range is necessary to rectify a gross inequality or gross injustice;

(*b*) notwithstanding anything contained in paragraph (*a*) of this subsection, where it considers it fair and reasonable to do so, authorize or direct an employer to increase a single rate, or the rates within a range, established under this Order, if the increase does not have the effect of increasing the weekly single rate, or the weekly rates in the range, payable by the employer to employees in that occupational classification in August, 1939, or where the employer commenced payment of wages to employees in such classification in a month subsequent to August, 1939, in such subsequent month, by more than the amount of the appropriate maximum cost-of-living bonus;

(*c*) authorize or direct an employer

(i) to alter a term of employment, which may have the effect of increasing, directly or indirectly, a single rate or the rates within a range established under this Order for an occupational classification of his employees; or

(ii) to establish a single rate or range for a new occupational classification of his employees in respect of which section seventeen of this Order is applicable; or

(iii) to establish a range of rates for an occupational classification for which such employer pays only a single rate established under this Order; or

(iv) to change a time rate or range of rates established under this Order into a rate or range of rates established under this Order on another basis of calculation, or to change a rate or range of rates established under this Order on another basis of calculation into a time rate or range of rates established under this Order; or

(v) to establish a single rate or range of rates calculated on any other basis to be paid in conjunction with a time rate or range of rates established under this Order,

in such manner or at such rate or range as in the opinion of the National Board is fair and reasonable and is consistent with and will give effect to the purposes of this Order, having regard to all the circumstances deemed by it, in its discretion, to be material.

(2) In considering any application to authorize or direct an increase in wage rates under this section, the National Board shall take into account the probable effect of such increase in wage rates on the cost of living and on the cost of production or operation of the business or industry in which the increased rates are to be paid, and shall require any employer who alleges that the proposed increase in wage rates will be beyond his ability to pay without increasing the price of his products or services rendered by him) to present evidence in writing demonstrating the basis of such statements and setting out the amount of the increase in the price of his products or services for authorization of which it will be necessary for him to apply if the proposed increase in wage rates is made. No decision of the National Board under this section shall be construed as imposing an obligation on or implying a commitment on the part of any other agency of government.

(3) For the purposes of this section

(*a*) the appropriate maximum cost-of-living bonus means

(i) where the employer was paying wages to employees in the classification in August, 1939:

(*a*) for all adult male employees and all other employees employed at weekly rates of $25 or more, the amount of $4.60;

(*b*) for male employees under 21 years of age and female employees, employed at weekly rates of less than $25; the amount equal to 18·4 per cent of the weekly single rate or of the highest weekly rate in the range for the classification in August, 1939;

(ii) where the employer commenced payment of wages to employees in an occupational classification in a month between August, 1939, and October, 1943:

(*a*) for all adult male employees and all other employees employed at weekly rates of $25 or more, an amount equal to 25c for each point to the nearest 1/10 point which the official index of the cost of living (adjusted to the base of 100·0 points for August, 1939) increased between the month in which the employer commenced payment and October, 1943;

(*b*) for male employees under 21 years of age and female employees employed at weekly rates of less than $25 a week, an amount equal to 1 per cent of the single weekly rate, or of the highest weekly rate in the range, paid by the employer to employees in the classification, in the month in which he commenced payment, for each point to the nearest 1/10 point which the official index of the cost of living (adjusted to the basis of 100·0 points for the month of August, 1939) increased between the month in which the employer commenced such payment and October, 1943.

(*b*) "weekly rate" means, in respect of a time rate, such wage rate applied to the period of a week of normal working hours, and in respect of an incentive rate the average earnings of an employee in a week in respect of normal working hours."

4. Section 22 is rescinded and the following substituted therefor:—

"22. (1) If the National Board finds that the rate or range of rates payable by an employer for an occupational classification of his employees engaged in international railway train service was, at November 15, 1941, pursuant

to a collective agreement or to a recognized practice of long standing, based upon a rate or range of rates payable to similar employees of that employer outside of Canada, and if the National Board also finds that the rate or range of rates outside of Canada upon which the said rate or range of rates was based has been changed by a collective agreement, established practice or competent authority, the National Board may in its sole discretion authorize or direct the payment of a new rate or range of rates for that occupational classification in respect of any of such employees engaged in international railway train service based in a corresponding manner upon the corresponding new rate or range of rates payable outside of Canada.

(2) Any rate or range of rates established under subsection 1 of this section shall not be taken into account by the National Board in considering any other application for changes in wage rates.

(3) No authorization or direction may be made under this section by a Regional Board."

5. Section 33 is rescinded and the following substituted therefor:—

"33. Every employer, or officer or agent thereof, who

(*a*) causes a lockout of any of his employees, to deter or prevent any of his employees from making an application to a War Labour Board constituted under this Order, or who

(*b*) contravenes or omits to comply with any of the provisions of this Order or of any direction or Order made under the authority of this Order by a War Labour Board constituted under this Order,

shall be guilty of an offence and liable upon summary conviction to a fine of not less than $100 and not more than $5,000; and each payment of wages to an employee in contravention of any provision of this Order or of any direction or order made under the authority of this Order shall constitute a separate offence under this section."

6. Subsections (1) and (2) of section 35 are rescinded and the following substituted as subsection (1):—

"35. (1) Every employee who strikes or takes part in any strike

(*a*) to obtain an increase in a single rate or range established under this Order, or pursuant to any direction of a War Labour Board constituted under this Order, or

(*b*) to obtain the alteration of a term of employment which would, directly or indirectly, increase any such rate or range, or

(*c*) for the purpose of obtaining any direction from or of influencing the decision of a War Labour Board constituted under this Order or in protest against or to obtain any alteration in such direction.

shall be guilty of an offence and liable upon summary conviction to a fine of not more than Twenty Dollars for each day or part of a day he is on strike."

7. Subsection (3) of section 35 is renumbered as subsection (2).

8. Section 36 is rescinded and the following substituted therefor:

"36. Any person who incites, encourages or aids any employer to do or to omit to do any act or thing in contravention of this Order or any employee to go on or to continue on strike in contravention of this Order shall be guilty of an offence and liable upon summary conviction to a fine of not more than Three Hundred Dollars."

9. Section 38 is rescinded and the following substituted therefor:

"38. Any document purporting to contain or to be a copy of any bylaw, direction or order of the National Board, or of any Regional Board, and purporting to be signed by the Chairman or Vice-Chairman of any such Board or by the Chief Executive Officer or Secretary of the National Board, or Chief Executive Officer of a Regional Board, shall in any proceedings under this Order be evidence of the bylaw, direction or order therein contained or of which it purports to be a copy."

A. D. P. HEENEY,
Clerk of the Privy Council.

Women In Industry

Canadian Women in War Industries

TWO years' operation of National Selective Service indicates impressively the major role which the women of Canada have taken in the war production program. In reviewing the story of their achievement it is necessary to outline the background which led up to this great influx of women into numerous industries and pursuits hitherto held solely by men.

During the first two years of the war, there was a plentiful supply of women workers but by March, 1942, it was apparent that great efforts would be required to secure a sufficient number of women for future expanding demands.

Initial Planning for Womanpower

Plans were made to put the situation clearly before Canadian women and to enlist their whole-hearted co-operation in carrying their full share of the responsibility for production and services essential for war and at home.

In May, 1942, a wide publicity campaign was undertaken utilizing the facilities of magazines, newspapers and radio. The editorial staffs and personnel of these agencies gave generous support in featuring the appeal.

Organized Women Confer

In August, 1942, at the invitation of the Minister of Labour, representatives of Canada's nationally organized groups of women met in Ottawa to confer with Mrs. Rex Eaton, Associate Director of National Selective Service (Employment of Women) to advise and discuss the best methods for acquainting the women with the urgent need for them to engage in war work.

The response to this publicity of the press, radio and organized women, was immediate. By letter, wire and personal appeal, they offered their services, signifying their willingness and desire to work.

Compulsory Registration of Certain Age Groups

The emphasis at this time was upon the war industries. Canadian women, up to the outbreak of war were not industrially inclined. The total number of women so engaged, prior to this period was 144,000. War industries require younger women who could be readily adapted to this new type of work. In order that the Local Employment Offices would have on file a list of these younger women who were available for work, the compulsory registration of all Canadian women between the ages of 20-24 years inclusive was taken in September, 1942. Effective use has been made of this registration by means of follow-up interviews when each available young woman was informed of urgent needs and asked if at all possible to accept essential work.

Control of employment regulations came into effect in September, 1942, making it compulsory for women (excepting graduate nurses, teachers, and domestic workers) to seek work only by permission of National Selective Service. By this means, the officers of the Employment and Selective Service Offices have been in touch with those seeking work and are able to influence the applicant to accept essential work.

Effects of Publicity and Controls

The impetus given by the publicity, the interest aroused by the registration, and the effective interviewing of women at the Employment and Selective Service Offices secured for war industry a sufficient number of women workers to meet the constantly expanding needs for the next succeeding months.

The number of women employed in war industries as at June 2, 1941 was 40,000. By January 30, 1943, the number had increased to 216,000 and to 235,000 at September 30, 1943. (Latest figures now being compiled indicate that this total has been substantially increased.)

Other Demands for Women Workers Affect Supply

In the meantime, in all centres across Canada, employment of women in other work than war industries became more essential with each passing month.

As more and more men joined the fighting forces, or transferred to heavy work or were directed to high priority jobs, women were expected to move into the places thus vacated.

Transfer of Women

It then became necessary to ask women to come from outside points to work in war industries to meet the needs of highly industrialized areas. Large numbers responded and were transferred from the Maritimes and Prairie regions to Ontario and Quebec. Women officials of the Local Employment and Selective Service Office carried out these transfers according to instructions covering provision for the welfare of women so transferred. The minimum age of workers, medical examination, supervision while travelling, clothes, pocket money, introduction to job, conditions of employment and housing are set out in directives and clearance orders and the conditions must be met before transfers are made.

Introduction of Part-time Workers

Early in 1943, the strain on the resources of womanpower became apparent through reports of shortages in industries and occupations of high priority. With the opening of seasonal work in agriculture and food processing and increased activity in all services, the situation became serious. Six months previously, the Employment and Selective Service Office had been asked to prepare for such a situation by conferring with employers on the possible use of women who could work for part-time.

In June, and until the end of 1943, short and intensive recruiting campaigns for women to accept part or full-time employment, were conducted in areas of shortage—Halifax, Toronto, Ottawa, Hamilton, Peterborough, Welland and St. Catharines, at a time when the requirements of the employer were firmly established and women could be immediately referred to work. Again, the Women's Organizations played an important part. The Local Councils of Women, composed of affiliated women's organizations, sponsored these campaigns and worked in close co-operation with National Selective Service and the employers. Thousands of new women workers accepted employment on full-time or part-time basis.

The net result of all these efforts is that there has been a steady increase in the number of women gainfully employed until at October 1, 1943, over a million Canadian women or 26 per cent of the total number of women between 14 and 64 years of age inclusive are engaged in remunerative work. Of this total, as already indicated 235,000 are in war industries.

Throughout the whole of this program of recruitment of women, a major role has been taken by the Employment and Selective Service Offices, formerly known as Employment and Claims Offices of the Unemployment Insurance Commission.

A sufficient number of offices were opened to provide adequate coverage and in all centres additional provision was made for the reception, interviewing and placement of women. In larger cities, the Women's Divisions of Local Offices are located in separate premises and with few exceptions women supervisors and officers conduct the affairs of the Women's Divisions.

In the months of November and December, 1943, the net unfilled labour demand decreased considerably. At no time, however, has the demand been altogether overtaken. During the months of January and February of 1944, the situation had not changed appreciably except that in Toronto and Montreal, there have been acute shortages in war industries which are gradually being overtaken.

Training Women for War Industries

The recruitment and training of over a quarter of a million women for new work in war industries represents a large scale enterprise reflecting credit upon both women and management.

Under the Federal War Emergency Training Program of the Federal Department of Labour, co-operating with Provincial authorities on an equally shareable cost basis, 26,499 women had been enrolled in training schools up to January 31, 1944. Industry also commenced training under the Government Program and 14,169 women had enrolled up to January 31, 1944. There was also enrolment of 1,837 in part-time training.

Protection of Women in Industry

Existing Provincial legislation, provided protection to women workers through the provisions of the Factory Acts and other beneficial legislation.

At the invitation of the Federal Minister of Labour, representatives of nine Provincial Departments of Labour attended a special conference in Ottawa during the early part of 1943, for the purpose of discussing the welfare and protection of workers in industry. At this discussion, special emphasis was placed on conditions in industry affecting women workers and a complete review of the situation was made. Assurance was given by the Provinces that immediate inspection would be made of any circumstances drawn to their attention by the officers of National Selective Service. The approval of the Provinces was given to any efforts made by National Selective Service to encourage management to establish adequate personnel and welfare departments,

recreational facilities, suitable housing or other like facilities which would improve the welfare conditions for the thousands of women entering industry under the pressure of war emergency.

The Provinces and National Selective Service have worked harmoniously by reason of this understanding with the result that new war industries have made excellent provisions and many of the longer established industries have improved their facilities.

Women on Farms

In addition to the women employed in industry, Canada has approximately 760,000 (14—64 years) women who are wives and daughters of farmers. These farm women have assumed farm tasks not ordinarily undertaken by Canadian women and have been in large part responsible for the increased agricultural production during the time of manpower shortages.

With the aim of encouraging more women to help on farms, the Dominion Government entered into an agreement with the various provinces in May, 1943, whereby financial assistance was offered toward the setting up of camps for farm workers. In Ontario and British Columbia, thousands of women volunteered to work on farms during seasonal peaks. A total of 1,818 girl students enlisted for farm work during the summer holidays and farm service camps were operated by the National Council of the Y.W.C.A. to supervise the comfort and feeding of these girls.

Thousands of women have assisted in canneries and food processing plants when, except for their efforts, the food produce would not have been conserved.

Teachers

In order to ensure that important field of teaching should not be neglected, it became necessary in June, 1943, to refuse permission to teachers presently employed in teaching to accept any other type of employment, except with special permission, while at the same time allowing them to change their positions within the profession.

Nurses

A compulsory registration of graduate nurses was taken in March, 1943. It was shown that the reserves of nursing personnel were largely in the group of married women, who could work part- or full-time in their own communities but that the largest number was available for emergencies only. More than 52,000 graduate nurses were registered.

Day Care of Workers' Children

As forecast in the Prime Minister's speech of April, 1942, care for children of mothers in industry was early recognized as the responsibility of the Department of Labour. Married women were already in industry and it was apparent that many more would enter employment with the increasing demands of war.

An agreement was, therefore, drawn up to provide for:

1. Day Care of children, 2—6 years old.
2. Supervision outside of school hours for children over six years.
3. Foster home care for children under two.

All plans were promoted on a 50-50 cost basis between the Dominion and Provincial Governments.

Three provinces have signed the agreement, Ontario, Quebec and Alberta. Twenty-seven day nurseries have now been approved of which 24 are now in operation. Six of these are in Montreal, 14 in Toronto, 2 in Hamilton and one each in Brantford, Galt, Guelph, Oshawa and St. Catharines. Accommodation is provided for over 1,100 children.

In Ontario, the Day Care of School Children outside of school hours has provision for 2,100 children with 25 school centres in Toronto, 1 in York County, 5 in East York, 1 at Lakeview Beach and 3 in Hamilton. All buildings are opened before regular school hours and there is provision for supervised recreation. Children receive a hot meal at noon which has been planned for every unit by a qualified nutritionist. Recreational Facilities and supervision extend until 6 or 6.30 p.m., when working mothers return home.

National Selective Service Offices in all cities cooperate closely with the Local Committees which are supervising this day care of children. In each Local Employment Office there is a counselling service where mothers applying for work may be advised of the facilities available for their children. Employment officials in Toronto notify the local day nurseries of all applications from working mothers.

Standards of care in these day nurseries and day care centres are maintained on a high level, all supervisors and assistants being fully trained in the care of children and every member of the staff carefully chosen. Close cooperation is maintained with the Local Board of Health and regular health inspection is made with clinical treatment where necessary.

It is the aim of these day nureseries and child care centres to give all children in their care the best opportunities for physical and mental development.

Industrial Relations

During this two-year period of Selective Service, a marked change is evident in certain industries, in the attitude of management towards labour. This is particularly noticeable in the provision of better working facilities and greater attention to the health and welfare of workers.

In order to check on present working conditions and facilities for women workers engaged in War Industries, a representative of National Selective Service visited several plants in the vicinity of Toronto.

None of the plans included in these surveys indicate that there is any noticeably large movement of women out of war work. When women quit work the main reasons given are:

Tiredness, due to several years of work, which threatens their health. Many such workers express the hope of returning after a rest period.

Illness in the home, or personal illness.

Home responsibilities.

Following are the observations of the National Selective Service representative after visiting four specimen industries in the Toronto area:

General Engineering Company (Canada) Limited

At the plant of General Engineering, Scarboro, engaged in fuse filling, with 3,722 workers, women outnumber the men. The division is: women 2,290, men 1,432.

Working Conditions

The entire plant is divided into two main sections each of which is again subdivided into numerous small sections. One section is known as the "dirty area," the other the "clean area." Curiously enough at the "dirty side" the cafeteria, records, executive departments, and certain offices are to be found. The name, however, does not mean that such departments are housed in unclean surroundings. "Dirty area" indicates any part of the grounds or buildings where explosives are not stored and where special precautions are not required. The "clean area" as interpreted by the rigid requirements of the fuse filling plant means something different from ordinary every-day standards. The difference begins in what is called the "change houses" set at the junction between "dirty" area and "clean" area. These houses have large built-in rooms staggered at intervals all along the side of the plant, each one accommodating a certain number of women. Similar rooms are provided for men.

Stringent Safety Rules

Women workers are obliged to conform to the plant safety rules which direct that no silk underwear, silk stockings or silken accessories may be worn inside the plant. They are therefore instructed to come in cotton underwear. In the "change house" the employees strip to a brassiere and a pair of shorts. The cotton socks or stockings may have to be removed for inspection in order that the women change house inspectors, who are on duty continuously, may see that no contraband is hidden in them. Contraband includes such articles as chewing gum, chocolate, matches, metal, money, brooches, ear rings, rings, watches, which must all be left in personal lockers or at the Guard House. Nothing may be carried over, no chewing gum used on "clean area."

Having obeyed these rules, the worker passes to the barrier separating the "dirty area" from the "clean area," pauses for inspection before the women guards and then crosses the barrier to her own locker on the "clean area" where the plant uniforms are kept. This uniform consists of white cotton trousers and coat, white cotton bandana which fits completely over the hair, since loose hairs might set up friction; and shoes which have no metal in them but are pegged with wood. The "change house" is fitted with wash rooms where the girls must wash before going on duty. Hands and nails must be exceptionally clean, free from grit. The doors of the "change house" open on to long corridors called the "cleanways" which surround and run through the working premises of the plant. These corridors have a rubberized flooring with rounded sides, so that there are no corners to catch the dust, and are washed down twice a day in order to prevent any accumulation of explosive dust from the feet of the workers.

Workers are instructed to proceed towards their different rooms in a quiet orderly file, to keep in double file and on the right side of corridors, without running, in order to avoid collision at any point with explosive materials which may be proceeding through the tunnels. The individual buildings or workshops give an impression of the orderly cleanliness of a hospital or operating room. The soundproof rubberized floors, light buff walls and modern soft built-in lights, the raised polished benches with their green plastic tops, the comfortable high protective backed seats of the workers, all are designed for working comfort, convenience and efficiency. Each set of operations is carried on by small groups of women. All

rooms running along the great corridor are easily cut off from other rooms if at any time there should be danger from an accident or fire. There is no outside light entering these rooms, since a ray from the sun might catch on a brass instrument and ignite the powder, but all are air-conditioned.

Nature of Work

The fuse parts and primers arrive at the Filling Department complete, assembled as if ready to fit into the shells. All operations commence with the breakdown of these. The complete fuse comes to groups of workers who break it down into its component parts and from there each individual part is placed in small boxes and passed along to the deft hands of other women workers, who fill the various rings, circles and compartments with charges of powder. At one point what appears to be an exceedingly small amount of powder run into a groove is put under a pressure of 15 tons and as these tiny devices proceed along the filling lines there is imparted a mental picture of the manner in which the time device in a shell works, from the smallest ignition of powder in the fuse head to the next size then to the larger, and finally out to explode the entire shell. Each separate operation is inspected and tested at intervals all along the line to make sure that the various charges are firmly pressed in and clamped down, since failure to get sufficient pressure on any one of the contacts might result in a premature explosion with danger and probable loss of life to make a "dud" shell, equally dangerous to the safety of men in battle.

The last operation of all is the re-assembling and finally the inspection of all parts, from whence they go on to other inspection rooms to be passed by representatives of the Crown, after which they are ready for packing and shipment to the shell plants.

Hours of Work and Holidays

The hours of work consist of three shifts of 8 hours for one set of operations, and two shifts of 9½ hours for another set. There is a ten minute rest period morning and afternoon. One full hour is allotted for lunch, but one-half of this must be taken up in the change-over from working clothes as no employee may leave the "clean area" for the "dirty area" in work clothes. They have to change into street clothes before leaving for meals and change again before going back into "clean area."

Every employee, after working for one year, is entitled to one week's holiday with pay.

Free Transportation

All employees are given free transportation to the plant from central points in Toronto, numerous plant busses being on hand on the hours specified for workers to entrain. These junctions connect with all routes from which workers travel from any part of the city of Toronto.

Health Precautions

The health of workers at the plant, a matter of primary importance, is supervised by a staff of doctors and nurses who interchange so that medical attention is available on all shifts, day and night. The plant has its own hospital, dispensary and waiting and rest rooms. Every new employee must pass a medical inspection before being admitted to the plant. Owing to the nature of the work carried out in General Engineering, i.e., the assembling, packing and filling of fuses and detonators for shells, careful precautions have to be taken in the arrangement and cleanliness of the plant and in the deportment of workers and staff, while on duty. (Naturally the nature of the work precludes any boisterous behaviour.)

The general health of workers is looked after by the sick benefit group which for payment of $1.13 a month pays a sick or injured worker (women) ten dollars a week for periods up to 13 weeks for any one illness or injury. Men receive fifteen dollars a week for a month's payment of $1.75. The benefits start on the first day in case of accident or illness. The hospitalization plan, costing fifty cents a month, gives 21 days hospital care during any one year, or if the insured is married, includes the family for one dollar. If the husband is in the Armed Forces, this rate is reduced to seventy-five cents.

Nutritional Facilities

The cafeteria, built with a high roof, is well lighted and well ventilated and has seating accommodation for over 600 at a time. It is run on a 24-hour schedule for the convenience of all shifts and the menu includes vegetables, meat, dessert and a beverage, complete for twenty-five to thirty-five cents. A twenty-five-cent breakfast of ham and eggs, an omelette or bacon and eggs, with toast, tea or coffee, is available for the early morning shift, or workers coming off night duty.

Adjoining the spacious cafeteria is a comfortable lounge room where easy chairs, magazines, radio and various table games are available for recreation between shifts and at the noon hour. Here stationery can be obtained by the workers.

Recreation

Because of the exacting nature of the working conditions at this plant, the management has provided special recreational facilities to offset fatigue and strain. Therefore, unusual diversionary features are included in order that the women workers may have opportunities to relax.

For both men and women, the emphasis is placed on health and fitness, through recreation and good food. An exceptionally wide range of activities is covered in the Recreation Club—skating rinks in the winter, health and beauty gym classes for the women, golf lessons. Membership in the Recreation Club is one dollar per year, for which the members enjoy access to a list of recreational facilities including tennis, theatrical groups, saddle club, dancing classes, craft group, Red Cross, gym classes, bridge clubs, amateur shows, shuffle board, bowling, hockey, soft ball. Showers and lockers are provided. In addition, members are entitled to reduced charges on certain activities and on sweaters for sports wear and sports equipment which they wish to purchase for personal use. Recreational Club members get a reduction of twenty-five cents on membership tickets in the Y.W.C.A. and free tickets to some of the most popular radio programs. Employees also enjoy a Hobby Club which includes many interested in the arts and crafts. Last year's exhibition of the Hobby Club held in the plant cafeteria, indicated considerable talent in oil painting, weaving, sculpture, photography, etching, designing, philately, wood carving, needlecraft of many varieties, beaten metal work, etc. Among the many prizes awarded, Ross Davis won several for his collection of toys and doll furniture, which he made especially for the Government Wartime Day Nurseries.

Toy Shop.—Under the leadership of skilled craftsmen, assisted by amateurs, a toy shop is run, where any interested employee, man or woman, may contribute spare time towards painting, fixing and making over damaged toys or creating new ones.

The company considers that the encouragement of these hobbies, with friendly competition among exhibitors and interchange of ideas, is reflected in the quality of their war work and contributes to the general morale.

Music and Dancing.—Dancing and other forms of entertainment are featured at this plant and well-known bands play for dances in the cafeteria. The Glee Club and Theatre Groups have discovered some outstanding ability among plant employees—a former Metropolitan opera singer, several concert singers, a talented group of negro women singers, fine tenor voices, and some theatrical talent from members of the Guard House.

It is not unusual for the Recreation Club to sponsor a dance in the banquet hall of the Royal York for the benefit of their friends in the Armed Forces.

New Workers.—In order to alleviate the loneliness of new workers who have come from out-of-town points, the Personnel Department sponsors a Sunday evening entertainment arranged by the girls of the Victory Club at East Toronto Y.W.C.A.

Victory Gardens.—This war industry, set in the heart of the country, free from city traffic and smoke, resembles a village community with its many interests and activities centred around the plant. One of the most unusual of these is the victory gardens begun last year. With forty acres of land available, twenty-seven gardens were taken up by two hundred and fifty people of whom over one-half were women. Seeds were bought and sold for the benefit of employees, in the cafeteria. Each lot is 20 feet by 60 feet and workers may have two lots to farm if they wish. Last year's experiment in victory gardening at the plant was such a success that membership in the victory gardens this year is expected to far exceed the figure for 1943. At the close of last year, enthusiastic victory gardeners held a fall fair and display of their products in the plant cafeteria.

Personnel Department

A large Personnel Department operates in both "clean area" and "dirty area". Some members of the well-equipped staff are on duty day and night. At intervals, one or more of these officials visit the working areas to see if any women are in need of advice or help. Women coming and going on night shifts receive supervision and attention, where necessary, from the personnel staff. The pleasant interviewing offices have private rooms where employees may call and discuss their problems by appointment, either direct or through their foreman. These are situated in both the "clean area" and the "dirty area", and are easily accessible.

In addition to acting as interpreters of the service, rules and policies of the Company, the staff of the Personnel Department perform the following functions:—

Check absentees for the various departments.

Help mothers to plan for the care of their children.

Explain and assist in matters of mothers' allowances and dependents' allowances, including wage reports and affidavits.

Assist in family or domestic problems through advice and suggestions.

Help to plan for holidays and camps.

Give information regarding recreation facilities in the community as well as the company.

Assist new employees particularly to understand whether medical care is available in their own community for them and their families.

Discuss educational opportunities in Toronto.

Assist in looking for satisfactory living quarters.

Provide change of address cards and cooperate with workers who have to change their names or marital status, toward understanding the provisions of the Dominion Government in this respect.

A branch Bank is situated on the grounds for the convenience of employees.

Unions

Unions operating in this plant are The Chemical Workers of Canada, Local No. 1, affiliated with the Canadian Congress of Labour, and the Munition Workers Union (Shop Committee).

Activities and Awards

A "Good Housekeeping" contest is publicized in the plant publication, "Fusilier", which awards a shield each month to each shop or department in the plant judged to have achieved the highest standard of cleanliness, neatness and safety. In addition to the shield, certificates of merit are given to the shop or department showing the greatest improvement during the month and also a pair of tickets to any theatre show or hockey game, the latter a gift to the superintendent or to any person who is primarily responsible for the excellent record of "Good Housekeeping". In addition to "Good Housekeeping" awards, all employees qualify for coloured chevrons worn on the uniform sleeve, to denote perfect attendance records. The bars for the first nine months are in blue, one for three months' perfect attendance, two bars for two three-month periods, and three bars for three three-month periods. Four months of perfect attendance gains a red bar and one year of perfect attendance records a broad red bar. A coloured "diamond" seen on the uniform sleeve signifies the number of years of service, one year red, two years green, three years blue.

Suggestion Box

Plant awards are also made by the management for worthwhile suggestions. The Suggestion Box is open to all employees. Recent issues of the "Fusilier" carry a list of employees, many of them women, who have submitted worthwhile ideas. Some suggestions have made for greater efficiency in certain shops, cut down on production time and produced better work.

The plant is proud of its group of coloured workers, working on inspection, assembling and filling benches in good comradeship with white workers. Several of them have received special mention through the plant for efficiency, and one young woman superintends and oversees certain operations in her particular work room, to the entire approval of her fellow workers, all of whom are white.

Included in the membership of the plant are the girls who drive the station wagons between Scarboro and downtown Toronto. Delivering important messages, meeting trains, carrying Government and other important officials, these women drivers put in a full and busy day. Several of them are married; one is a woman from Alberta, whose husband is serving overseas and whose five brothers and a sister are all in the Armed Forces.

E. L. & A. Robinson (Canada) Limited

A plant which ranks in importance with many war industries having "A" priority rating is the E. L. & A. Robinson (Canada) Limited, of Leaside, manufacturers of food containers, many of which are essential for the shipment of food stuffs overseas.

The most important production is thermoplastic containers for foodstuffs, particularly dried eggs and protective wrappers for other goods being shipped to Allied Countries.

One hundred and seventy women are employed, fifty of whom work on part-time but there is work for a larger number if they could be obtained. Full-time employees work for a five-day week of 45 hours and Saturday morning is counted as overtime and paid at time and a half rate. The work day is nine hours, with one hour for lunch.

The Employment Manager is also in charge of Personnel and Welfare.

The plant has an excellent cafeteria where workers may obtain a full-course meal for twenty-five cents, with soup and other extras at five cents a serving. A rest room is provided and adequate wash rooms and locker space. For recreation there is a social club, membership being ten cents a week which entitles members to dances and free entrance to certain shows, also to any of the organized social activities. There is an employee's benefit fund operating which, for ten cents a week, pays out seven dollars a week in case of sickness. Fifty cents a month covers hospitalization and the subscribers receive

twenty-one days hospital care during the first year. The workers maintain their own Community Chest to which all employees subscribe. This chest builds up a fund for the assistance of any worker needing emergency assistance or from which to apply donations to special charities. The selection of the fund is made entirely through the votes of the employees, working in committee with the head of the Personnel Department.

This modern plant, pleasantly situated and well lit, is one which will have a place for women in its post-war plans, for it is anticipated that not only will women employed on to-day's operations have an opportunity to hold their jobs when the war ceases, but that the needs of peacetime will enable the plant to increase production and thus offer further opportunities for a greater number of women workers.

Research Enterprises, Limited

Employing 100 women out of a total working force of 1,000 employees in 1942, Research Enterprises, Limited, today employs 2,850 women who comprise approximately 40 per cent of the total number of 7,400 workers at this plant. In addition, the plant employs 190 women on part time.

Women are doing the greater part of the fine precision work in the grinding, polishing, inspecting and assembling of prisms and sights for binoculars and fine instruments and radio parts for the Armed Services. The educational standing of these women varies from Grade 8 to a university degree. Girls entering this plant have every opportunity for advancement, providing they are able to avail themselves of the instructions. Here are some of the courses offered by the Training Department for further education: mathematics, machine shop practice, blueprint reading, home economics, chemistry, psychology, fine instruments, and a list of general subjects.

Working Conditions, Medical Care and Nutrition

A helpful booklet handed to all women employees on their induction into the plant states the importance of wise eating for energy, steady nerves and general well-being, the necessity for care in clothing and in covering the hair when working at or near machines. It also contains stimulating advise regarding appearance and grooming.

Working conditions for women at this plant are well organized as regards provision of medical care, plant lighting, carefully measured distance for comfort and working ease between seating accommodation and bench, and insistence upon safety regulations. The Training Department within the plant and the co-operative supervisors are open to suggestions and ideas which might make for greater efficiency and speed up of the job.

Every employee gets a rest period of ten minutes during the morning and afternoon. The working day is 9½ hours with half an hour for lunch. Those who have worked a full year are entitled to one week's holidays with pay.

There is a cafeteria owned by the company but operated by outside interests, whose meals and preparation have to conform to the standards desired by the management. Here, full course luncheons may be obtained for twenty-five to thirty cents and in addition canteens with soft drinks and tea or coffee are operated on each floor.

Music

In many parts of the plant, particularly where machines are operated, the worker enjoys music at various periods throughout the day. Waltz music, bands, and popular songs seem to be the favourites.

Medical Care

First aid stations are situated on every floor and there is a fully equipped hospital with several doctors and graduate nurses in continual attendance. In addition to inside hospital care, all employees are encouraged to take membership in the Blue Cross Hospital Plan which provides 21 days of hospitalization during the first year, for a payment of fifty cents per month. Employees also have a mutual benefit club.

The plant has its own blood donors' clinic installed on the grounds. This adjoins the hospital and has been exceptionally well supported by the women employees as well as the men.

Union

The union operating in this plant is a local of the United Steel Workers of America; affiliated with the Canadian Congress of Labour.

Personnel Work

The plant has a Personnel Department where a trained staff are on hand to assist women employees to adjust themselves when home problems or personal worries threaten interference with their work. Representatives are on hand at all shifts, day and night.

Particular attention is paid to prospective mothers who may need assistance. Every endeavour is made to insure that they have medical advice and if unmarried or without

nearby relatives or friends, they are, with their own consent, linked up with suitable social agencies who will undertake to assist them. Care is taken that such women stop work before their physical welfare is endangered.

Since the problem of shopping for home needs is one which affects the attitude of many married women workers, the Personnel Department at this plant endeavours to advise workers, but no special provision is made for shopping facilities.

The Company offers assistance to employees needing help with their income tax, explanation of Unemployment Insurance, cost-of-living bonus, etc. Upon obtaining permission from the foreman, employees may discuss these problems with the pay office staff.

Absenteeism does not appear to be a great problem at this plant and due to the many provisions made for comfort and care of the workers, the percentage of those applying for work is satisfactory.

Recreation

There is a popular recreation club organized within the plant where sports, dances and hobbies of all kinds are encouraged. Interests range from a camera club, collecting tropical fish, basket ball, dressmaking, skating, hiking, swimming, riding, and many other indoor and outdoor sports. There are no facilities for recreation at the plant but arrangements are made with the Y.W.C.A. and many outside sporting centres to accommodate company workers.

Plant Magazine

A plant magazine is published entitled "Vision". It deals with plant activities, social and personal notices, praises production efforts and devotes some space to sporting notes and recreational news, and suggestions for safety.

Goodyear Tire and Rubber Company

At the plant of the Goodyear Rubber Co., Lakeshore Road, Toronto, over 1,000 women workers are engaged in building rubber tanks for fighting planes and constructing life rafts. Women work for a six day week in three 8-hour shifts and have become skilled in the many intricate small operations involved in finishing the fabricated hard rubber tanks before they are ready to ship out to the plant assembly line. Fitting the very small closures and zippers in the interior of these tanks, the inspection and passing of such delicate operations, is all work for which the small hands of women are peculiarly adapted. The present output, with limited staff, is 90 tanks a day. The objective of the Company is to have sufficient women working to enable them to turn out at least 150 a day.

Goodyear workers have a large cafeteria run by the Company for their benefit, where a full-course meal can be obtained for 25 cents. This includes meat, two vegetables, dessert, tea, coffee, or milk. On every floor there is a canteen service where hot or cold drinks and chocolate bars or similar light refreshment can be obtained. Wash room facilities and lockers are ample and well arranged and there is an up-to-date hospital staff with several nurses and doctors, some of whom are on duty at all hours of the day and night. Women's wash rooms, with lockers, are under the care of a matron on each floor. There is no woman Personnel Manager.

In this plant the employees work to music which comes on at intervals of every fifteen minutes or so throughout the day. This is distributed to the different floors through loud speakers. There is a "juke box" in a space off the cafeteria for dancing in the lunch hour. There are rest rooms and built in bowling alleys, with billiard tables for the men.

The plant runs a relief and mutual benefit association to which seventy per cent of the women employees subscribe, and a hospitalization plan with a membership of ninety per cent of all employees. Workers pay forty cents per month for hospitalization and are entitled to hospital care for 21 days during the first year. Under group insurance benefits, employees can draw up to fifty dollars a month for sickness.

The Goodyear Recreation Club, open to all employees, conducts variety shows, periodic dances, outdoor hikes and organized games.

Union

The Union operating in this plant is the United Rubber Workers of America (Local 232) which is affiliated with the Canadian Congress of Labour.

Women Munition Workers in South Africa

SOUTH African experience with the employment of women in a Government ordnance factory was the subject of a paper recently published by the Director General of Supplies.* Comments by officials of other undertakings also show that women are successfully filling a wide variety of jobs in the manufacture of aerial bombs, mine workshops, the Mint and in works operated by the South African Railways and Harbours Administration. All agreed that the employment of women on repetitive work had made possible a substantial increase in production with very slight additions to the skilled labour force. Some considered that women could be employed on more skilled work with a little extra training.

Women were admitted to the engineering industry after consultation with the trade unions concerned and after regulations had been made to govern their employment. The regulations fix rates of pay and stipulate that no woman may work more than 48 hours a week without the permission of the Controller of Industrial Manpower. In addition, they require employers to secure the Controller's permission before hiring women emergency workers and state that their employment is to be terminated when the engineering industry ceases to be a controlled industry.

The entry of women into the Government ordnance factory enabled it to double the number of machine tools while increasing the number of skilled workers by only 14 per cent, and to operate 24 instead of 12 hours a day. To reduce training to a minimum, operations were simplified and the women employed only on repetitive work. It was found more satisfactory to operate a plant training school than to rely on general schools. Two months training was considered sufficient but instructors supervised women in the shop during the transitional period after graduation.

Women's Trade Union

A women's trade union had been formed in the industry. In the ordnance factory women shop stewards were elected to the shop committee. The manager comments:—

> The usefulness of the committee is beyond question, and the contribution of the women members is of special significance in view of the proportion of women in the factory.

Because few of the women had had industrial experience and many had family responsibilities, welfare work was important and a welfare officer was on duty on each shift. These officers were responsible to the management and not expected to concern themselves with production or discipline in the shop. Their duties included weekly reports on accidents, absences and discipline.

The accident rate was reported to be considerably higher among the women. Uniforms and caps were provided free and welfare officers could suspend any woman violating the safety clothing rules. First-aid equipment was under the supervision of the welfare officers assisted by production staff with training in this field.

Hours of Work

The women were employed on three eight-hour shifts for six days a week. Sundays were used for maintenance work and eliminating bottle-necks. One man was required to set up the machines of six or seven women. Skilled men worked 12-hour shifts. Government regulations fix a minimum week for men of 54 hours and a maximum of 60. Permission had been obtained to exceed this limit in the case of men who supervised women on the Saturday afternoon or Sunday night shifts.

All workers were allowed 30 minutes for lunch. Plans for a canteen had not been completed at the time of the report but tea, pies, fruit, etc. were sold in the plant. Women workers were granted two ten-minute breaks a day when tea was served. Men on 12-hour shifts were given four rest pauses.

In assessing the value of women workers in the Government ordnance factory, the manager pointed out that "the effective costs of trained diluted labour . . . . amount at least to the minimum rate laid down for skilled artisans". The high turnover and absence rates of women workers and the expense of training and supervising them add to the cost. The absence rate was 6 per cent for women and 4·1 for men. Over 2 per cent of the women's absences were due to domestic reasons. The turnover rate for women was 34 per cent per annum and for men, 25 per cent. Women workers spoiled more material than men but not so much as to cause concern. Further, a factory dependent on specialized dilution labour was considered to lack flexibility in changing its production program. Nevertheless, in his opinion, the employment of women was justified by the great increase in production made possible by dilution.

Decisions of National War Labour Board

RECENTLY the National War Labour Board has issued decisions in the following cases:

Union Tractor and Harvester Company, Limited (Calgary, Alta.).

Brotherhood of Railroad Trainmen on behalf of Dining Car Employees and Canadian Pacific Railway Company.

Powdrell and Alexander of Canada, Limited (Cornwall, Ont.), and United Textile Workers of America, Local No. 11.

Dominion Coal Company, Limited, Acadia Coal Company, Limited, and Old Sydney Collieries Limited, and United Mine Workers of America, District No. 26.

A. R. Williams Machinery Company of Vancouver, Limited.

Donnell and Mudge Limited (Toronto, Ont.), and Donnell and Mudge Employees' Association.

Metallic Roofing Company Limited (Toronto, Ont.), and U.A.W.-C.I.O.

Electro Metallurgical Company of Canada Limited, and United Electrical, Radio and Machine Workers of America, Local No. 523.

Welland Chemical Works, Limited, and United Gas, Coke and Chemical Workers of America, C.I.O., Local No. 165.

Canadian Car and Foundry Company, Limited (Malleable Division at Brantford, Ontario), and United Automobile, Aircraft and Agricultural Implement Workers of America (U.A.W.-C.I.O.), Local No. 397.

Messrs. Milne and Middleton, Limited (Vancouver, B.C.).

Aluminum Company of Canada, Limited, and Aluminum Goods, Limited (Toronto, Ont.) and their Employees' Council.

Aluminum Company of Canada, Limited (Toronto, Ont.) and their Employees' Council.

J. Walter Thompson Company, Limited (Toronto, Ont.)

Otis-Fensom Elevator Company, Limited (Hamilton, Ont.).

Abitibi Power and Paper Company Limited, and International Union of Operating Engineers.

Hudson's Bay Company (Winnipeg, Man.).

Canadian Car and Foundry Company, Limited (Aircraft Division at Fort William, Ont.) and Lodge 719, International Association of Machinists.

Joseph Stokes Rubber Company, Limited, Welland, and United Electrical, Radio and Machine Workers of America, Local 523.

Saskatchewan Co-operative Livestock Producers Limited (Saskatoon, Sask.).

Pacific Pine Company, Limited (New Westminster, B.C.).

Swift Canadian Company, Limited (St. Boniface, Man.) and United Packinghouse Workers of America, Local 219.

Credit Foncier Franco-Canadian (Vancouver, B.C.).

Mersey Paper Company, Limited (Liverpool, N.S.) and International Brotherhood of Paper Makers, International Brotherhood of Pulp, Sulphite and Paper Mill Workers and International Brotherhood of Electrical Workers.

California Fruit Growers Exchange (Regina, Sask.).

Re: Union Tractor & Harvester Co. Ltd. (Calgary, Alberta)

Reasons for Decision

The application was for permission to inaugurate a group life insurance plan. The Regional Board for Alberta refused to give approval because the plan is non-contributory, and granted leave to appeal.

The schedule of benefits provided by the plan is as follows:

Classes of Employees	*Amount of Insurance*
General Employees	
with less than 2 years service....	$1,000
with 2 years or more service.....	1,500
Department Managers, Foremen, Salesmen	
with less than 2 years service....	1,500
with 2 years or more service.....	2,000
Executives	
with less than 2 years service....	2,000
with 2 years or more service.....	2,500

The total yearly premium will be about ·6 per cent of the company's yearly payroll. The Company has no other employee-welfare plans.

The plan proposed is confined within reasonable limitations and is not one which in our view can be said to be inconsistent with the prime purpose of P.C. 9384. namely the stabilization of wages.

The appeal will be allowed, but it should be noted that we have no jurisdiction with respect to officials who fall under the Wartime Salaries Order (P.C. 1549). March 6, 1944.

Re: The Brotherhood of Railroad Trainmen on behalf of Dining Car Employees and Canadian Pacific Railway Company

Reasons for Decision

This is an application for increased wages and changes in overtime conditions.

The matter was brought forward under P.C. 5963 and we are of opinion that no case was made out by comparison with wages paid either in railway operation or hotel operation to justify granting the increases asked.

The question of overtime is much more difficult. Over a long period of collective bargaining the generally accepted basis seems to have been one of assignment rather than hours. In other words, various assignments are advertised and are bid in by the employees according to seniority. At the present time there are some 32 assignments of which 12 carry time in transit in excess of 240 hours monthly and 20 less than 240 hours monthly.

The request of the employees is for time and one-half after 208 hours monthly. This is of course based on the prevailing industrial practice of the 8 hour day at 26 working days monthly. To adopt the request would be to imply that any assignment would connote a minimum of 208 hours which is not the case since there are some 11 assignments of less than 208 hours monthly. Besides we do not think that war time is the proper time to overthrow the whole foundation upon which the collective bargaining process has been built up. Neither are we overlooking that in each assignment there are a number of rest days monthly, and that in many assignments rest periods are allowed in transit.

However, on account of unusually heavy traffic conditions prevailing at the present time, some of the crews are very definitely overworked. We had cases cited to us where the hours put in ran as high as 18 hours in a day. In theory it seems to have been taken for granted by the railway that these men were entitled to some 9 hours' rest at night besides what shorter periods might be obtainable in the daytime according to conditions. The difficulty is that passenger demands, the number of meals served and the extra burden of cleaning up on some of the runs is as a steady process cutting into the night rest period as well as tending to eliminate any casual daytime rest.

In the Oshawa Railway Case we laid it down that merely because there was an increase in the volume of work that did not justify any adjustment in wages. Of course that observation was limited to an increase in volume in the regular working hours. It was not intended to apply to cases like this where the increase involved extra working hours.

It seems to have been taken for granted that, for the purpose of estimating overtime on an hourly basis, 240 hours has been taken as the month's work. All these employees are paid by the month. We feel that we cannot fairly initiate a rule which will result in a general increase in the dining car service in order to rectify a condition of temporary hardship which accrues to some of the employees. Nevertheless we feel also that some compensation must be found for those who are obliged to give up some or a large part of the normal period of rest.

Accordingly, on those assignments in which the time in transit exceeds 24 hours, if an employee is not relieved from duty for at least 9 hours between the serving of dinner and breakfast, any time between the actual time of release from duty and 9 hours shall be paid for as overtime at the rate of time and one-half on the minute basis to the nearest 15 minutes. For the purpose of calculating overtime rate the working month is to be considered one of 240 hours.

Just how the above directive may be complicated by other conditions of work tentatively agreed to we are not sure. If there is any such complication which the parties cannot agree to solve the matter may be spoken to. Since the method directed is new in the sense that no sufficient prior records have likely been kept, it cannot be made retroactive. It should become effective March 15, 1944 and reviewable on the application of either of the parties on or after September 15, 1[illegible].

March 8, 1944.

Re: Powdrell & Alexander of Canada, Limited (Cornwall, Ontario) and United Textile Workers of America, Local No. 11

Reasons for Decision

This is a joint appeal from the Ontario Regional Board involving payment of a night shift premium.

The Company, supported by the Union, applied for permission to pay a 10 per cent premium to permanent night-shift workers. Rather than adopt a percentage basis, the Regional Board authorized payment of a 5-cent hourly premium.

The argument for the appeal is that the flat premium upsets established wage differentials. That may be so, but as a rule premium

for night work is not related to skill or job classifications. It is compensation to the worker for the disadvantages of having to work at night. (See Ford Motor decision, LABOUR GAZETTE, 1943, pp. 585, 1342.)

We are of opinion that in this case the decision of the Regional Board must be sustained and the appeal will be dismissed.

The Company's brief requests that we set the effective date for the inauguration of the bonus, a matter which was apparently not dealt with by the Regional Board. We see no reason why the bonus should not be paid retroactively to the date of application, namely, October 26, 1943.

March 9, 1944.

Re: Dominion Coal Company Limited, Acadia Coal Company Limited and Old Sydney Collieries Limited and United Mine Workers of America, District No. 26

Supplementary Reasons for Decision

The above case was disposed of by reasons for decision dated December 3, 1943, with the reservation that certain specific adjustments asked would be dealt with at a later date on the report of a referee. Mr. W. H. Ley was appointed as referee to investigate the matter on the ground and we now have the benefit of Mr. Ley's report.

The first of the matters to be dealt with is that of equalization of basic wage rates of employees of the Electrical Department of Dominion Coal Company Limited to the level of basic wage rates paid employees of the Company's main machine shop at Glace Bay. From Mr. Ley's description of the type of work and skill required we are of the opinion that the rates should be equalized. Keeping in mind that this is a matter being dealt with under P.C. 5963 this would make the rates in the Electrical Department before cost-of-living bonus and recent increase of $1 per day as follows:

	Per Hr.
Charge Hand	79·7
Journeyman I	74·6
Journeyman II	66·8
Helper	55·6

The above rates are for employees of the Electrical Department and do not apply to colliery electricians. The increase is to be effective from February 1, 1944.

The second matter is that of equalization of basic wage rates of Allan and Albion Colliery Shops of Acadia Coal Company to the level of basic wage rates paid employees of main shops of Dominion Coal Company Limited at Glace Bay. It appears that there is a recognized differential between rates paid in colliery shops of the Dominion Coal Company and the main shops at Glace Bay. The Acadia Shops in question here are more nearly comparable to the colliery shops than to the main shop. Accordingly, this application must be denied.

The third matter is that of increase of basic wage rates of trimmers and shippers, North Sydney Pier of Old Sydney Collieries Limited, to 60 cents per hour. This application presents certain difficulties. Shippers presently receive slightly less than trimmers. To give effect to the Union's proposition would wipe out the differential and cause further dissatisfaction. Furthermore, to place the men on this pier in an exactly comparable situation with those at the Louisburg Pier would mean that trimmers would have to be put on a contract rate which due to lesser volume of coal shipped, would result in lesser earnings. In the circumstances we feel the matter is better left alone. Accordingly, the application will be denied.

March 8, 1944.

Re: A. R. Williams Machinery Company of Vancouver Limited

Reasons for Decision

This is an appeal from a decision dated October 21, 1943 of the Regional Board for British Columbia refusing permission to pay a special bonus out of certain net commissions earned by the Company under the terms of an agreement for the sale of machinery and equipment owned by The Consolidated Mining & Smelting Company of Canada at Anyox, B.C.

The appellant Company is asking for authority to distribute 20 per cent of the amount earned among certain of its employees and officials on the basis of 12 per cent of their 1939 salaries. The Regional Board thought there was no provision in the Wages Control Order (P.C. 5963) for the approval of an application of this kind.

The question for determination is whether, prior to wage control, i.e. prior to November 15, 1941, there was on the part of the Company a bona fide agreement to pay the bonus. The appeal is supported by the sworn statement of six employees who declare that on October 28, 1939, the Company's manager advised a meeting of the staff of the Com-

pany's intention to have them share in the proceeds of the enterprise, which had a special character when viewed against the background of the Company's ordinary operations. The evidence of the Company's general manager is that he gave the staff a "distinct understanding and promise". We accept these statements and find that there was an agreement prior to the effective date.

The percentage of the earnings assigned to the staff was not determined until sometime in 1943. It is said that it was only then that the total net earnings were ascertainable and that statement also we are prepared to accept, as well as the percentage arrived at.

(Reference to Montreal Tramways Company: L.G., 1943, pp. 747, 750.).

The appeal should be allowed to the extent of our jurisdiction which does not cover salaried officials.

March 8, 1944.

Re: Donnell and Mudge Limited, New Toronto, Ontario, and Donnell and Mudge Limited Employees' Association

Reasons for Decision

(*Oral Decision*)

In this case the Regional War Labour Board seems to have acted upon the premise that there had been a general increase in wages subsequent to November 15, 1941. The evidence in the matter and the data we have been able to collect seem to establish quite the contrary, so we feel that the Regional Board in this case proceeded upon a wrong basis in deciding the case. While the evidence is not as clear cut as it might be, considering the over-all picture we are inclined to the view that the case comes reasonably under the proviso of section 34, sub-section 3, of P.C. 5963, so that the appeal will be allowed and the cost of living bonus set at the maximum, to be effective November 1, 1943.

March 9, 1944.

Re: Metallic Roofing Company Limited, Toronto, Ontario and U.A.W.—C.I.O

Reasons for Decision

(*Oral Decision*)

We feel that we can dispose of this matter now, without reserving judgment on it.

On the first question, that of vacations with pay, the views and policy of this Board on that subject are to be found in three main decisions, (1) in the case of Division 4, (2) in the case of the Brotherhood of Maintenance of Way Employees of the railways, and (3) in the Ford Motor Car Company case. Consistent with the views expressed in these cases as to the desirability of wartime vacations, we feel that this appeal should be allowed. There will be vacations with pay in the year 1944. It is our custom to point out that Directive Bulletin D. B. No. 17 is generally the base upon which the terms for vacations with pay are placed. We leave it to the parties to endeavour to work out a vacation with pay plan, using that bulletin as the basis, and fitting it to the particular circumstances of the industry, pointing out to both that they should keep an eye on devising terms along such lines as will interfere the least with production.

On the question of double time for Sundays and holidays, this does not at this particular time, according to the evidence, make a great deal of financial difference, but there is a principle involved. It appears that this company before the effective date of the wage freezing order, November 15, 1941, had been paying double time for work performed on Sundays and holidays, and had in fact made some application to the Regional Board at one time for permission to do so. We do not think that a condition of work which prevailed before November 15, 1941, can be changed unilaterally, and therefore we allow the appeal in respect to that matter.

The same principle applies in connection with overtime. Prior to November 15, 1941, the working week was forty-four hours, and evidently that was changed unilaterally. We feel that we cannot uphold that matter and therefore we allow the appeal, so that time and a half will become payable for hours worked after forty-four in one week.

On the question of the cost of living bonus the appeal will be denied. The union has not even attempted to make out a case in connection with section 34 (3) of the pertinent order in council P.C. 5963. We only have jurisdiction to adjust a cost of living bonus upward where it is established that an inequity exists within an industry. No case having been made out on that subject the appeal is denied.

As to the labourer's rate, that has been dealt with by the Regional Board. It does not appear to be a very important matter to us, but we think that the terms of the direc-

tion of the Regional Board should be changed so that the fifty cents an hour labour rate is the minimum instead of the maximum.

On the question of pay for sick leave the appeal will be denied. It will be found that question was dealt with by us in the case of Division 4 and the reasons given there apply in this case.

The effective date will be July 23, 1943.

March 9, 1944.

Re: Electro Metallurgical Company of Canada Limited and United Electrical, Radio & Machine Workers of America, Local No. 523

Reasons for Decision

(Oral Decision)

In this case the union is appealing to have the authorization which was given by the Ontario Regional War Labour Board converted into a direction. The report of the Regional Board sets out as the basis of the decision, that they thought it was proper to grant an authorization and leave it to the parties to negotiate whether that authorization would be implemented, or not. In other words it seems to be definitely implied that the Regional Board was not prepared to make any direction.

Reference has been made to some of the cases in which this Board has authorized, in fact directed, off-shift premiums, the Ford Company case, the Dominion Tar & Chemical Company and the John Inglis case. Those are all companies which operate on a non-continuous process basis, that is, it is not necessary in the nature of the industry to keep the plant continuously in operation. In this case it seems to be quite clear that it is a continuous process industry, and besides that rather cogent evidence is offered to show that the rates on shift work are higher than they are on day work, for substantially the same class of work. That indicates that consideration was given in connection with the setting up of rates to the fact that there should be higher payment. To direct the company to introduce an off-shift premium under the circumstances would, we think, go in the direction of authorizing a second premium to one evidently existing.

We note that reference is made to two decisions of the Regional Board in the case of Canadian Carborundum Company and Norton Abrasive Company, where evidently the Regional Board did authorize off-shift premiums and, as far as we can ascertain from the material before us, did not direct them. It may be that in these cases the companies may have made the application, or there may have been a joint application, and consideration possibly was not given to the proposition that they were continuous process industries.

Under all the circumstances that surround this case we are all of the opinion that the appeal must be dismissed.

Since rendering the above we have dealt with the appeal of the Welland Chemical Company and feel that in order that consistency should obtain in the two cases, the authorization given to this company for off-shift premiums should be set aside.

March 15, 1944.

Re: Welland Chemical Works, Limited and United Gas, Coke and Chemical Workers of America, C.I.O., Local No. 165

Reasons for Decision

(Oral Decision)

This appeal is concerned with two or three matters of principle. In the first place it is to be noted that the Regional Board did not give a direction, but merely an authorization in the case. The Company, which evidently is not a Crown company, but one which is operated for the benefit of the Crown, evidently on account of its relationship with the government, brings the appeal in order to have the situation made definite, rather than having it dependent on a mere authorization, and we will proceed to deal with it on that basis. On this particular subject we are of the view that in any case which is of a controversial nature the Boards should give directions. Merely to give an authorization, under circumstances of this kind, is only to prolong the difficulty between the employer and his employees, or the union that represents them. Therefore we feel that we should state our disapproval of the method which the Ontario Regional Board employed in this particular case.

On the question of off-shift differentials we are all of the opinion that the appeal must be allowed and the authorization cancelled out. The reasons for this are substantially the same as those given in the case of the Electro Metallurgical Company which immediately preceded this one.

On the question of the authorization with respect to the pay of female employees, we are all of the opinion that the terms of the

authorization as given by the Ontario Regional Board are fair. To quote it:—

"When female employees perform work usually done by male employees and obtain equal production with male employees the Board authorizes you to pay the said female employees the rates prevailing for males."

This question of pay for female employees is one that has evidently caused quite a good deal of difficulty with industry during the war period. Now, it is to be noted that Order in Council P.C. 8253, Order in Council P.C. 5963 and the recent Order in Council P.C. 9384 contain no reference whatever as to any differentials between employees because of their sex. All of these Orders in Council deal with wage rates without reference to the sex of the employee. The Orders in Council do, with respect to the cost of living bonus particularly refer to sex, and that only emphasizes the intention, as we see it from the Orders in Council, that there was to be no distinction between rates for males and females. That, of course, is subject to the observation that before a female employee would be entitled to the same pay as a male, equal results would have to be produced.

Unions have used the slogan for some time now "Equal pay for equal work". Perhaps that slogan is a little indefinite in a way, in that we think there should be read into it that where the work produced by a female gets the same result having the cost factor in mind as that done by a male then the pay should be equal.

We realize, of course, that the authorization still leaves the question of classifying the female employees in the plant in order to comply with it, to the company, and we are not suggesting, at all, that females in the plant as such should necessarily obtain, or have, the same wages as the males. It is a question of the efficiency of the female employee in each case.

In none of the Orders in Council has the Government dealt directly with the matter. We think that perhaps it is time for some declaration to be made by ourselves in connection with it. Accordingly on this branch of the appeal the appeal will be dismissed and the authorization will be changed to a direction.

March 15, 1944.

Re: Canadian Car & Foundry Company, Limited (Malleable Division at Brantford, Ontario), and United Automobile, Aircraft & Agricultural Implement Workers of America (U.A.W.-C.I.O.), Local No. 397

Reasons for Decision

On August 26, 1943, the parties signed an agreement providing that:

"Hourly-rated production employees covered by this agreement and working on other shifts than the day shift, will receive a five cent per hour bonus."

According to the agreement, the day shift works from 7 a.m. to 5 p.m. and the regular hours for all night shift workers are 9 hours starting at the closing hour of the day shift.

Upon application for approval of the premium for night work,, the Regional Board by final decision dated January 18, 1944, declined to inaugurate night work premiums in the Brantford industrial area. By leave of the Ontario Board, the Union now brings this appeal from the decision.

Following our recent decision (dated February 24, 1944) in the Slingsby Manufacturing Company case for the Brantford area, we shall allow the appeal. The premium shall be payable retroactively to the effective date of the collective agreement, July 1, 1943, but shall not be added to the base rate for the purpose of computing any overtime rate.

March 14, 1944.

Re: Messrs. Milne & Middleton, Ltd. (Vancouver, B.C.)

Reasons for Decision

This is an appeal from a decision of the British Columbia Regional Board on an application made after December 9, 1943 (the effective date of the Wartime Wages Control Order, 1943, P.C. 9384) for permission to increase a cost of living bonus from 7·4 to the full 18·4 points.

Section 34 (3) of P.C. 5963 gave war labour boards the power to adjust cost of living bonuses; there was no other source of jurisdiction. On December 9, 1943, the Executive by P.C. 9384 (section 1) enacted the Wartime Wages Control Order, 1943, and revoked the Wartime Wages Control Order established by Order in Council P.C. 5963 except that any application received by a war labour board prior to December 9, 1943, is to be dealt with under the terms of P.C. 5963 (see section 5 of P.C. 9384). Of necessity therefore, the law governing this application can be found only in the new order.

Under the prevailing enactment, there is no power to make the type of adjustment asked

for. "Previous authorized" bonuses are to be merged with "previous authorized" basic rates to produce "established" rates which can be increased by authorization or direction of a war labour board, but only if the provisions of section 20 (*a*) of the new order are met. By turning to the definition of the expression "previous authorized bonus" (section 13 (1) (i)), it becomes clear that no bonus adjustment can take place under the current Order. The cost of living bonus has seen its day.

The view taken by the Regional Board was the correct one and we must dismiss the appeal.

March 14, 1944.

Re: Aluminum Company of Canada, Limited, and Aluminum Goods, Limited (Toronto, Ontario) and their Employees' Council

Reasons for Decision

An appeal from the Ontario Regional Board on a matter touching vacations with pay.

There was a joint application for authorization to allow two weeks' paid vacation after a qualifying period of five years' employment. The approval of the Regional Board was subject to a seven-year period.

The Regional Board proceeded upon a quite proper comparison with the Aluminum Works at Kingston, in respect both of vacations with pay and four paid statutory holidays. Having thus exercised its discretion, we shall not interfere.

The appeal is dismissed.

March 14, 1944.

Re: Aluminum Company of Canada, Limited (Toronto, Ontario), and their Employees' Council

Reasons for Decision

This is an appeal from a decision of the Ontario Regional Board dated August 26, 1943, upon a joint application for certain wage increases which were authorized from July 1, 1943. The only question in the appeal is that of the effective date.

The application was made June 26, 1943, following a job evaluation made in answer to a request for a revision of some specified rates presented to the Company by the Council on February 26, 1943. It was agreed then by the Company that any increase, justified by the findings of the evaluation, should date back to the request.

Apart from special circumstances, the date of application determines the effective date of a Board's finding and direction, and an employer's willingness to pay beyond does not improve the case for retroactivity.

Here, however, we have a case where, we take it, the rate for certain classifications was out of line with the Company's general wage set-up in the plant; this was presumably established before the Regional Board who rectified the situation. If the process required to demonstrate the inequality consumed some four months, we can hardly agree that the workers concerned should have to bear the consequence of passage of time.

We think the appeal should be allowed.

March 14, 1944.

Re: J. Walter Thompson Company, Limited (Toronto, Ontario)

Reasons for Decision

By leave of the Ontario Regional Board, this appeal is of their decision dated December 4, 1943, declining approval of the inauguration by the Company of the Ontario Hospital Association plan on a non-contributory basis.

The Regional Board adheres to its rigid rule requiring a minimum 30 per cent contribution by employees to the cost of all such welfare plans.

In a case where the total amount cost for 46 employees is $486, a requirement of the kind is arbitrary and pointless. We fail to perceive what relation it can have to the general purpose of the Wages Control Order.

The appeal is allowed.

March 14, 1944.

Re: Otis-Fensom Elevator Company, Limited (Hamilton, Ontario)

Reasons for Decision

The Company appeals from a decision of the Ontario Regional Board declining approval of a revised vacation with pay plan for hourly-rated employees.

The previous plan provided a one-week vacation after three years and a two-weeks vacation after ten years of continuous employment. The proposed schedule effective for the calendar year 1944 is as follows:

2	months	continuous	service—	1	day	vacation
4	"	"	"	—2	days	"
6	"	"	"	—3	"	"
8	"	"	"	—4	"	"
10	"	"	"	—5	"	"
12	"	"	"	—1	week	"
10	years	"	"	—2	weeks	"

with all qualifying periods to be computed immediately prior to May 1 in any year.

The reduction of the qualifying period for one week's vacation from three years to one year is in line with this Board's general policy and should have been authorized. But to reduce the minimum one-year period of qualification is a tendency away from the purpose of paid vacations in wartime. There may be compelling conditions in some industries which justify it; but such conditions are not shown to exist here. Apart from this, the other provisions of the plan outlined in the application dated November 6, 1943, are approved.

The appeal is allowed subject to the reservation indicated.

March 14, 1944.

Re: Abitibi Power and Paper Company Limited and International Union of Operating Engineers

Reasons for Decision

This is an appeal from a decision of the Ontario Regional War Labour Board dated August 27, 1943, by which the Board authorized maximum basic rates for engineers as follows:—

	Per Hour
Engineers, 2nd Class—water tenders..	90c.
Engineers running engines.....	85c.
Engineers classed as firemen.....	75c.

It is to be noted that the decision appealed from is an authorization, not a direction. The company is, of course, not obliged to implement a mere authorization. Nevertheless it brings this appeal because it feels it is entitled to a direction rather than a mere authorization in the circumstances. The case is a controversial one. When the Regional Board makes a mere authorization in such circumstances it only serves to keep the contest alive instead of terminating it. As a practice it should be discouraged. In controversial cases it is the duty of a Board to issue a direction and not simply send the issue back to the parties to continue their differences of opinion.

Evidently the authorized 90-cent rate for water tenders is based on a rate at the Great Lakes Paper Company at Fort William. The 90-cent rate at that mill came as the result of a joint application by the company and the union. The mere fact that employer and employee agree on a rate does not relieve a Board of its obligation to make a comparison of rates under Section 25 before authorizing the rate applied before. There is no sacrosanct quality in a joint application to take it out of the principle laid down in the Order in Council. What has happened here quite evidently is that the Regional Board established a new rate without comparison in the area and now proceeds to bring up other rates by comparison. That is the very sort of thing that P.C. 5963 was intended to discourage. To inaugurate a new high rate in May, 1943, and use it as the norm of comparison to increase other rates is not a method authorized by P.C. 5963, which sought to establish an anchorage at November 15, 1941.

The matter must be dealt with under the terms of P.C. 5963 by the comparative method. At Abitibi's Mission mill the rate for engineer water tenders is 84 cents, but at its Port Arthur mill the rate is 86 cents, as it is also at the Provincial Paper Company, which is allied with Abitibi. The Regional Board would have been quite within its rights to direct an 86 cent rate on the basis of such a comparison. On the same basis of comparison, engineers, classed as firemen, would be entitled to 72 cents an hour, and, on the basis of comparison with Provincial Paper Company, engineers running engines would be entitled to 79 cents an hour.

Accordingly, we feel we should allow the appeal, set the authorization aside and direct the company to pay 86 cents, 79 cents and 72 cents per hour to the classes concerned, effective June 15, 1943.

March 16, 1944.

Re: Hudson's Bay Company (Winnipeg, Manitoba)

Reasons for Decision

This is an appeal from a decision of the Regional War Labour Board for Manitoba involving an interpretation of P.C. 9384, the Wartime Wages Control Order, 1943.

The Company appellant began adding a supplement to its employees' wages as early as November 1, 1940, to compensate them for the increase in the cost of living. On October 24, 1941, the Wartime Wages and Cost of Living Bonus Order (Order in Council, P.C. 8253) was passed; it introduced the mandatory bonus. The Company then adjusted its bonus payments to the rise in the cost of living index from August, 1939, and has since paid the full bonus. On application to the Regional Board it asked that what it was paying by way

of cost-of-living bonus in excess of 95 cents weekly be ruled a "voluntary bonus".

By virtue of section 12 (*aa*) of P.C. 8253 and section 33 (1) of its successor P.C. 5963 the bonus in this case has ceased to have anything of a voluntary character. The full $4.60 is an "authorized bonus" in the sense of P.C. 9384, section 13 (1) (*i*). It must now be merged into the basic rate in accordance with the rules laid down in Schedule A of P.C. 9384. It is true, as appellant points out, that this will increase payments for overtime; that is the effect of the new wage control order.

We agree with the Regional Board and the appeal is dismissed.

March 16, 1944.

Re: Canadian Car & Foundry Company Limited (Aircraft Division at Fort William, Ontario), and Lodge 719, International Association of Machinists

Reasons for Decision

The Union appeals from a decision of the Ontario Regional Board dated December 18, 1943. Leave not having been obtained below, the appeal will be treated as an application for leave to appeal. The appellant is within the sixty-day period contemplated by our by-law No. 11 (4) (ii).

The Company and the Union were in contractual relationship under the terms of an agreement dated January 16, 1943, effective for one year from November 8, 1942. Following the negotiations for renewal, a number of matters were jointly submitted to the Regional Board for approval. There was denial of authorization of the following four items:

(1) Overtime at double time after 4 hours (instead of 8 hours) of overtime worked at regular time and one half rate;

(2) all Sunday work by boiler room employees (otherwise on 7th assigned day rule) to be paid at time and one half overtime rate and for time worked on holidays at double time;

(3) all lead hands (including particularly Progress Department lead hands) to receive an hourly rate not less than that provided for Class "A" production workers, regardless of nature of work performed by workers under their supervision;

(4) increase of premium for time worked on the third shift (12.01 a.m. to 8 a.m.) from 5 cents to 8 cents.

As to the overtime rate in item one, we do not find the condition sufficiently established in aircraft production to justify the proposed new clause under section 29 of P.C. 5963. Also we think that it is not opportune in wartime to increase penalty overtime rates. (See R.C.A.-Victor case: L.G., 1943, p. 1493.)

There appears to be some confusion with regard to the boiler room rate for Sunday and holiday work. The application to the Regional Board was couched in terms which are inconsistent with those in which the matter is presented to us. The general rule in continuous operations is to pay employees an overtime rate for work performed on their seventh assigned day. It would seem here that the boiler room employees were receiving better than that under the expiring agreement and the Regional Board is said to have in effect withdrawn a previous approval. We think the difficulty was caused by the wording of the original application and under those circumstances, rather than interfere, we would suggest a fresh application to the Regional Board.

We are in agreement with the Regional Board on the minimum rate for leadhands. The proper basis for a leadhand's remuneration is the remuneration of the workers being led.

With respect to the extra 3 cent premium to workers on the graveyard shift, we can find no comparative basis warranting approval and we must there again sustain the decision under appeal.

The appeal must, therefore, be dismissed.

March 16, 1944.

Re: Joseph Stokes Rubber Company Limited, Welland, Ont., and United Electrical, Radio and Machine Workers of America, Local 523

Reasons for Decision

(*Oral Decision*)

Well it seems to us, gentlemen, that this application was misconceived in its presentation to the Regional Board.

Evidently the Regional Board dealt with it on the basis of section 34, and being of the view that a general increase was granted in July, 1941, they deemed themselves not competent to go behind that date.

Then, evidently, no case was presented under the proviso of section 34 (3) which is the proviso which does give power to the Boards to increase cost of living bonus. There was no evidence before the Board which would justify giving any relief under the proviso.

We think for these, and the reasons already indicated during the discussion we have no alternative but to dismiss the appeal.

March 15, 1944.

Re: Saskatchewan Co-operative Livestock Producers Ltd. (Saskatoon, Sask.)

Reasons for Decision

In this matter, the Regional Board for Saskatchewan have exercised their discretion in dealing with an application for approval of a schedule of retroactive increases for salaried personnel. We do not think that we should, on an appeal, interfere with a decision of this kind, unless there is evidence of fundamental error. We cannot see here how we could reasonably substitute our views for those of the Regional Board and consequently the appeal must be dismissed.

We might, however, note by way of observation that the schedule approved was related to the salary of a senior official who, quite properly, was held to be under the Wartime Salaries Order, P.C. 1549. An increase approved under that Order may conceivably make possible a reconsideration by the Regional Board.

March 28, 1944.

Re: Pacific Pine Company, Limited (New Westminster, B.C.)

Reasons for Decision

This is an appeal from a decision of the British Columbia Regional Board refusing to approve increases for three monthly-rated classifications. This decision is based upon consideration of a local factual situation, familiar to the Regional Board. On a number of occasions we have said that in such a case we refrain from exercising *de novo* a discretion belonging in the first place to the Regional Board.

The appeal is dismissed.

March 28, 1944.

Re: Swift Canadian Company Limited (St. Boniface, Manitoba) and United Packinghouse Workers of America, Local 219

Reasons for Decision

This is a joint appeal by the Union and the employer from a decision of the Manitoba Regional War Labour Board dated February 2, 1944, by leave granted by that Board.

What is involved is the application of a direction previously made under the Wartime Wages Control Order, P.C. 5963, in respect of the inauguration of 5-cent hourly premium for time worked between 6.30 p.m. and 6.30 a.m. The Regional Board refused to extend the premium to non-production workers: shift engineers, firemen, temperature men, live stock receivers and other maintenance classifications. It also ruled that the premium should not be paid to any worker receiving an overtime rate.

It must be observed that we are dealing here solely with the restrictions made by the Regional Board; the principle involved in the introduction of the premium in the meat packing industry is not in issue in this appeal. Nor was it in issue in the Burns & Company case (L.G., Feb., 1944, p. 164).

Special compensation for the peculiar inconvenience attending night work is the general principle justifying payment of the premium. That is not to say that time worked on off-shift should necessarily be paid at a higher rate than time worked during the usual day hours. Each case must be examined under its own circumstances. It may be that established rates have taken night work into account or the process may be a continuous one or seniority privileges collectively bargained for may be involved. To give an example, we refer to our recent decision in the Electro Metallurgical Company case, dated March 15, 1944.

But once the premium has been introduced in a plant, as was done in this case, we fail to see, in the absence of a special reason, why the underlying purpose of the premium (compensation for inconvenience) is not equally applicable to non-production workers. We are, therefore, of the opinion that in this case the restriction should be removed.

On the other matter, there appears to have been some confusion. Although the object of an overtime rate is distinct from that of a night work bonus, the premiums are not incompatible, in the sense that they can be paid to a worker who is entitled to both of them. But, the night work premium should never be computed at the overtime rate, that is, it must remain constant and not become 7½ cents in this case when the worker is earning overtime.

With the reservation indicated, the appeal will be allowed.

March 28, 1944.

Re: Credit Foncier Franco-Canadien (Vancouver, B.C.)

Reasons for Decision

An appeal from the British Columbia Regional Board in a matter to be considered under P.C. 9384, the Wartime Wages Control Order, 1943.

Although the application was in terms for a basic wage increase from $90 to $100 per month for a janitor, it was shown in the material submitted by the applicant Company that the employee concerned had assumed the duties of the retired head janitor whose monthly wage had been $108. In effect, therefore, it was an application under section 20 (1) (c) (iii) of P.C. 9384 as amended, for the establishment of a range of rates—$100-$108, for an occupational classification for which a single rate had previously been paid; and it was so treated by the Regional Board.

On such an application War Labour Boards have a wide discretion, which in final analysis is limited only by the overriding provision contained in the last paragraph of section 20 (1), namely, that it must be exercised consistently with the expressed purpose of the Order. The purposes are found in section 14.

The Regional Board refused to authorize the establishment of a range for the classification of head janitor and, after investigation, directed the appellant to pay the employee the previous rate of $108.

On this appeal, brought by leave of the Regional Board, it is impossible for us to say that the decision was wrong, unless we are prepared to find that there was an error on a question of fact and hold that the new head janitor did not possess the skill and ability of his predecessor. The Regional Board in their discretion have decided against the appellant on that point, and we shall not interfere with their decision, so that the appeal will be dismissed.

However, perhaps this would be an appropriate occasion to say that under the governing legislation Regional Boards are not intended to take on the functions of minimum wage boards.

March 29, 1944.

Re: Mersey Paper Company, Limited (Liverpool, Nova Scotia) and International Brotherhood of Paper Makers, International Brotherhood of Pulp, Sulphite and Paper Mill Workers and International Brotherhood of Electrical Workers

Reasons for Decision

This is an application for leave and an appeal by the Unions from a decision of the Regional War Labour Board for Nova Scotia dated November 15, 1943, denying a general wage increase to bring the rates up to level of those paid in the Ontario mills. The base labour rate in the appellant's mill is 45 cents, exclusive of the cost of living bonus; in Ontario that rate is 56 cents.

At the time of the Regional Board's decision, the 45 cent rate prevailed in most of the Quebec and in the New Brunswick mills and it was upon a comparison with those provinces and the rate paid in other Nova Scotia mills that a decision was made refusing the application. Meanwhile, the Quebec and New Brunswick rate has been raised to 50 cents and we think that the proper course is, rather than send the case back for reconsideration by the Regional Board, to allow the appeal and to direct payment of a 5 cent hourly increase to all classifications covered by the application, except in those instances where the increase asked for is less than 5 cents.

There will be a finding and direction accordingly effective with the first payroll period commencing on or after October 20, 1943.

March 30, 1944.

Re: California Fruit Growers Exchange (Regina, Sask.)

Reasons for Decision

This is an appeal from a decision of the Regional Board for Saskatchewan. The application was for approval of a 10 per cent increase in salary for employees of the appellant's Regina office to compensate them for the extension of the work week from 40 to 44 hours. It was denied on the ground that no case had been made out for an increase under the comparative formula of section 25 of P.C. 5963. Leave to appeal was granted by the Regional Board.

The 4 hour extension in the work week is to be compensated at pro-rata straight time rates and we rather view this case as falling under section 29 of P.C. 5963. Under that section, we think the application should have been approved; we refer to our decision in the McKinnon Industries case (L.G., 1943, p. 1345).

The appeal is allowed with effect from August 16, 1943. March 30, 1944.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Proceedings under the National Labour Relations Board, the Industrial Disputes Investigation Act, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Industrial Disputes Investigation Act.—This article gives an account of all applications for Boards of Conciliation and Investigation, and the disposition of these applications. In cases where Boards are established, the LABOUR GAZETTE publishes in due course the full text of their reports, as submitted to the Minister of Labour.

Since the outbreak of war and the extension of the Industrial Disputes Investigation Act to cover disputes in war industries, the number of applications for Boards of Conciliation and Investigation has greatly increased. In recent months the majority of applications for Boards have been referred to Industrial Disputes Inquiry Commissioners for preliminary investigation, to determine whether the circumstances warrant the establishment of a Board. Reports of Commissioners appointed under the Act are summarized in this article.

Disputes which concern wage demands come under the jurisdiction of the National and Regional War Labour Boards.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published monthly in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1943 appeared in the LABOUR GAZETTE for March, 1944.

The latest available information as to strikes and lockouts in Great Britain and other countries appears from month to month.

Proceedings of Wartime Labour Relations Board

AN outline of the background of the Wartime Labour Relations Order together with a summary and the complete text of the Order was contained in the February issue of the LABOUR GAZETTE (p. 135-143).

On March 16, the Wartime Labour Relations Board (National) was appointed under P.C. 1895, and on March 20, with the approval of P.C. 1982, the Wartime Labour Relations Regulations were brought into force. During the month the Board met for three days, March 27, 28 and 29. It first established a procedure whereby it might discharge its duties under the Wartime Labour Relations Regulations, P.C. 1003, and then considered applications made to it for certification under the Regulations.

The Board consists of ten members: the Chairman, the Vice-Chairman, four members selected as representative of the point of view of employees, and four as representative of the point of view of employers. The Honourable Mr. Justice G. B. O'Connor of Edmonton, Alberta, a Justice of the Supreme Court of Alberta is Chairman, and the Vice-Chairman is the Honourable Mr. Justice J. N. Francoeur of Quebec City, a Justice of the Court of King's Bench for the Province of Quebec.

The four members representing the employees' viewpoint are: A. R. Mosher, Canadian Congress of Labour, Ottawa, Ont., F. Molineux, Brotherhood of Painters, Decorators, and Paperhangers of America,

Hamilton, Ont., W. L. Best, C.B.E., Brotherhood of Locomotive Firemen and Enginemen, Ottawa, Ont., and R. Harmegnies, The National Federation of Aluminum Workers, St. Joseph d'Alma, Que.

The four members representing the employers' viewpoint are: H. Taylor, Canadian National Carbon Co., Ltd., Toronto, Ont., W. H. Browne, The Moore Corporation Ltd., Toronto, Ont., A. Deschamps, Contractor, Montreal, Que., and A. J. Hills, Canadian National Railways, Montreal, Quebec.

At the initial meeting of the Board on March 27, the chairman and members were welcomed by the Hon. Humphrey Mitchell, Minister of Labour.

In inaugurating the Board, the Minister said: "The Wartime Labour Relations are an adventure in co-operation. They seek not only to reconcile inevitable conflicting interests and forces but also the conflicting spheres of governmental jurisdiction occasioned by the war. I firmly believe they will reduce these conflicts by providing an orderly procedure for collective bargaining.

"The task which you have assumed is one which is being attempted for the first time in Canada on a national scale and you are, therefore, pioneers in developing what I hope will prove to be a most satisfactory and enduring measure of co-operation in labour relations, a co-operation which is so vital to our war effort, and our national well-being."

Mr. Arthur MacNamara, Deputy Minister of Labour, in addressing the Board members, pledged the assistance of the branches of the Department to the Board in connection with its work.

Mr. Justice G. B. O'Connor, chairman, expressed appreciation of the encouragement given by the Minister, and voiced the earnest desire of the members of the Board to assist as intermediaries in bringing about harmony as between employers and employees in Canadian industry.

The Board appointed Mr. M. M. Maclean, Director of Industrial Relations, Department of Labour, as Chief Executive Officer, and Mr. Bernard Wilson, Industrial Relations Officer of the Department, as Acting Secretary.

Nineteen applications for certification were received during the month. Fifteen of these were considered by the Board, and referred to the Chief Executive Officer for preliminary investigation. They are as follows:—

Application affecting Canadian Brotherhood of Railway Employees and Other Transport Workers, and the Provincial Transport Company, Montreal.

Application affecting the Canadian Brotherhood of Railway Employees and Other Transport Workers, and Montreal Tramways Company, Montreal.

Application affecting Brotherhood of Railroad Trainmen, and Canadian National Railways and Canadian Pacific Railway Company (Conductors).

Application affecting National Syndicate of Electric Power Employees of Shipshaw, and the Aluminum Power Company, Shipshaw, P.Q.

Application affecting the Employees' Welfare Board of the Hudson Bay Mining and Smelting Company, Ltd., and the Hudson Bay Mining and Smelting Company, Ltd., Flin Flon, Man.

Application affecting the United Gas, Coke and Chemical Workers of America and St. Clair Processing Corporation, Ltd. (Polymer Corp.), Sarnia, Ont.

Application affecting the Canadian Brotherhood of Railway Employees and Other Transport Workers, and the Canadian Pacific Railway Company (Ticket Sellers, Union Station, City Office and Royal York).

Application affecting the Brotherhood of Railroad Trainmen, and the Canada Car and Foundry Company (Turcott and Dominion Plants), Turcott, P.Q.

Application affecting the United Steelworkers of America, and the Lawrence Manufacturing Co., Vancouver, B.C.

Application affecting the United Steelworkers of America, and the Western Steel Products Corporation, Limited, Vancouver, B.C.

Application affecting the Canadian Air Line Pilots Association, and Canadian Pacific Air Lines, Limited, Winnipeg, Man.

Application affecting the United Steelworkers of America, and Lighting Materials Co., Winnipeg, Man.

Application affecting the Amalgamated Shipwrights, Joiners, Boatbuilders and Caulkers, Local No. 2 and various shipyards, Vancouver. B.C.

Application affecting the Catholic Syndicates of Joliette, Quebec, and Joliette Steel, Ltd., Joliette, P.Q.

Application affecting United Steelworkers of America, Local 2765 and the National Machinery Company, Vancouver, B.C.

An Order in Council passed on March 30 (P.C. 2301), provides that the authority of the Wartime Labour Relations Board will not over-ride that of the Ontario Labour Court to continue with the cases which were before it on the date the Wartime Labour Relations Regulations came into force, i.e., March 20, 1944. The Order also provides that any trade union or employees' organization given cer-

tification by the Ontario Labour Court will be similarly recognized under the Labour Relations Regulations.

The Regulations apply, primarily, to persons employed in work that ordinarily comes under federal jurisdiction — including undertakings considered essential to the efficient prosecution of the war. They may be extended by enabling provincial legislation to include employees whose relations with their employers are ordinarily regulated by provincial legislation.

Recent Proceedings Under the Industrial Disputes Investigation Act

With the bringing into effect on March 20, 1944, of the Wartime Labour Relations Regulations, the Industrial Disputes Investigation Act, except as to matters pending, was declared to be of no effect. The Industrial Disputes Investigation Act is therefore considered to be in effect and applying only to such cases in which applications for the establishment of Boards of Conciliation and Investigation had been received prior to the effective date of the new Regulations.

SIX applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received during the month of March. Two Boards submitted their reports. Three Boards were established, and the constitution of two boards was completed during the month. Four disputes were referred to Industrial Disputes Inquiry Commissioners and two to Industrial Relations Officers. Reports were received from Commissioners in four cases while the settlement of seven disputes was reported. Four applications were withdrawn during the month and three applications rejected. The Board was re-convened in one case.

During the month of March two Boards of Conciliation and Investigation submitted their reports in connection with the following disputes:—

(1) Between the Johnson Wire Works Company, Limited, Montreal, Quebec, and its employees, members of Lodge 1758, International Association of Machinists.

(2) Between the Horseshoe Lake Mining Company, Ormiston, Sask., and its employees, members of Local 2, Sodium Sulphate Workers Union (C.C.L.).

Applications Received

During the month of March six applications* for the establishment of Boards of Conciliation and Investigation, under the provisions of the Industrial Disputes Investigation Act, were received in the Department of Labour as follows:—

(1) From employees of the Port Arthur Shipbuilding Company, Limited (Aircraft Division), Current River, Port Arthur, Ont., members of Lodge 1677, International Association of Machinists. The dispute arose over the adjustment of the existing agreement, and was said to affect 300 employees. The application not being in order was returned for revision. In the meantime, Mr. Robert Haddow, representative of the International Association of Machinists, advised the Department that there was a possibility the matter might be settled by direct negotiations if a Conciliation Officer were assigned to the case. On March 13, Mr. Bernard Wilson, Industrial Relations Officer, Ottawa, was instructed to proceed to Port Arthur in an endeavour to bring about settlement of the dispute. Mr. Wilson was successful in having the interested parties sign an agreement which provided for separate applications being made to the Regional War Labour Board in connection with the standard work week and the payment of double time on Sundays and holidays. On all other points, the completed agreement was to serve as a basis for a joint application to the Regional War Labour Board. In view of the settlement of the dispute, the applicants advised the Department that the application for a Board would not be resubmitted.

(2) From employees of the Sudbury-Copper Cliff Suburban Electric Railway Company, Sudbury, Ont., members of Division 269, Canadian Brotherhood of Railway Employees and other Transport Workers. The dispute, which concerns the inclusion of check-off and union shop provisions in a proposed collective agreement, was said to affect 30 employees. On March 20, Mr. Bernard Wilson, Industrial Relations Officer, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

(3) From employees of Canada Packers Limited, Edmonton, Alta., members of Local 243, United Packinghouse Workers of America. The dispute which developed out of the re-

* By P.C. 9384, the National and Regional War Labour Boards are specially charged with the duty of adjudicating wage demands. Therefore all applications other operating employees 50 to 71 cents per Investigation in which wages are the sole cause of the dispute are removed from the ambit of the Industrial Disputes Investigation Act and the application are referred to their respective War Labour Board.

quest of the union for recognition as the bargaining agency of the employees concerned, was said to affect 655 employees. On March 11, Mr. F. E. Harrison, Western Representative of the Department of Labour, Vancouver, B.C., was authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner was successful in having the interested parties agree to the taking of a representation vote of the employees of the company on April 14 to ascertain the organization through which the employees wish to bargain with their employer.

(4) From employees of the Canadian Brake Shoe and Foundry Company, Limited, Sherbrooke, P.Q., members of Local 2525, United Steelworkers of America. The dispute arose over the question of union recognition and the negotiation of a collective labour agreement. The applicant union stated that the dispute affected 150 employees. Mr. Bernard Rose, K.C., Montreal, P.Q., was authorized on March 15, as Industrial Disputes Inquiry Commissioner to investigate the dispute. Prior to the Commissioner entering the situation Mr. L. Pepin, Industrial Relations Officer, Montreal, P.Q., in arranging a settlement of another matter, secured agreement of the parties to the taking of a representation vote, to determine the agency the employees desired to represent them in negotiations with the employing company. The vote indicated that the applicant union did not represent a majority of the employees concerned, and as a result the Commissioner recommended that the application of Local 2525, United Steelworkers of America for the establishment of a Board be denied. The Commisisoner's recommendation was concurred in and the interested parties were advised that a Board would not be established.

(5) From employees of Vivian Diesel and Munitions, Limited (Plant 2), Vancouver, B.C., members of Local 2952, United Steelworkers of America. The dispute, which was said to affect 140 employees, concerns the negotiation of a collective labour agreement. On March 22, Mr. G. R. Currie, Industrial Relations Officer, Vancouver, B.C., was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

(6) From certain workpeople employed on the Lachine Canal employees of the Government of Canada, Department of Transport, members of Local 3104, United Steelworkers of America. The dispute arose over a request of the union for wage increases and improved working conditions. The applicant union was advised that the application could not be entertained in view of the recent proclamation of the Wartime Labour Relations Regulations, P.C. 1003, making the Industrial Disputes Investigation Act inoperative except as to matters pending when the regulations became effective.

Boards Established

Halifax Shipyards, Limited, Halifax, N.S. —On March 1, a Board of Conciliation and Investigation was established to deal with a dispute between the Halifax Shipyards, Limited, Halifax, N.S., and its employees, members of Local 1, Industrial Union of Marine and Shipbuilding Workers of Canada (C.C.L.) (L.G., March, 1944, p. 287). Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., who was authorized on February 17, as Industrial Disputes Inquiry Commissioner, reported that he had been unable to arrange an amicable settlement, and recommended that a Board of Conciliation and Investigation be established. The Board was fully constituted on March 18, the personnel being as follows: Honourable Mr. Justice John S. Smiley, Halifax, N.S., appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board; Messrs. Charles B. Smith, Halifax, N.S., and D. W. Morrison, Glace Bay, N.S., appointed on the nomination of the employer and employees respectively.

Direct-Winters Transport, Windsor, Ont. —A Board of Conciliation and Investigation was established on February 29, by the Minister of Labour under the provisions of Section 65 of the Industrial Disputes Investigation Act, to deal with a dispute between Direct-Winters Transport, Windsor, Ontario, and its employees, members of Local 880, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America. On January 3, 1944, a strike occurred of about 19 city pick-up drivers and warehousemen employed by Direct-Winters Transport at Windsor, Ont., and was terminated on the understanding that a Board of Conciliation and Investigation would be established to deal with the dispute. (L.G. Feb., 1944, p. 185 and March, 1944, p. 310). The Board was fully constituted on March 9, the personnel of which is as follows: Honourable Mr. Justice J. G. Gillanders, Supreme Court of Ontario, Toronto, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board; Messrs. J. L. Cohen, K.C., Toronto, Ont., and Gordon P. Dickson, Windsor, Ont., appointed on the nomination of the employees and employer respectively.

Dominion Forge and Stamping Company, Windsor, Ont.—On March 23, a Board of Conciliation and Investigation was established to deal with a dispute between the Dominion Forge and Stamping Company, Windsor, Ont., and its employees, members of Local 195, United Automobile Workers of America (C.I.O.) (L.G., March, 1944, p. 287). Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, Ont., who had been authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute, reported that he was unable to bring about a satisfactory settlement and recommended that a Board of Conciliation and Investigation be established. The company, through its counsel, having advised the Department that it did not propose to make a nomination of a person for appointment to the Board, the Minister of Labour, in accordance with Section 9 (*b*) of the Industrial Disputes Investigation Act, appointed Mr. John J. Robinette, Toronto, Ont., a member of the Board in the absence of a recommendation from the employing company. At the end of the month the applicant employees nomination of a person for appointment to the Board was awaited.

Board Reconvened

United Shipyards Limited, Montreal, P.Q.—The Board of Conciliation and Investigation which dealt with the dispute between United Shipyards, Limited, Montreal, P.Q., and its employees, members of Local 12, Boilermakers and Iron Shipbuilders Union of Canada (C.C.L.) (L.G., Nov. 1943, p. 1503) was reconvened on March 24. Following the report of the Board, the company conceded the right of the applicant union to bargain collectively for the boilermakers and iron shipbuilders and certain miscellaneous trades. Negotiations had been proceeding with a view to the signing of a collective labour agreement but these negotiations broke down over the question of union membership and the applicant union requested that the Board of Conciliation and Investigation be reconvened under Section 28 of the Industrial Disputes Investigation Act for the purpose of dealing with this remaining matter at issue between the parties.

Dispute Referred to Industrial Relations Officer

Dairy Pool Co-operative Association, Limited, Prince Albert, Sask.—An application for the establishment of a Board of Conciliation and Investigation was received on February 18, 1944, from employees of the Dairy Pool Co-operative Association, Limited, Prince Albert, Sask., members of Local 241, United Packinghouse Workers of America (L.G., March, 1944, p. 287). On March 6, Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, Man., was instructed to proceed to Prince Albert with a view to arranging a settlement of the dispute. Previous to the receipt of these instructions from the Department, Mr. Johnstone received a communication from the representative of the applicant union to the effect that he was proceeding to Prince Albert and anticipated effecting a settlement of the dispute.

Other Reports of Industrial Disputes Inquiry Commissioners

Aluminum Company of Canada (Kingston), Kingston, Ont.—On February 23, 1944, Mr. J. P. Nicol, Industrial Relations Officer, Toronto, Ont., was authorized as Industrial Disputes Commissioner to investigate a dispute between the Aluminum Company of Canada (Kingston Works), Kingston, Ont., and its employees members of Local 54, International Association of Machinists and Local 43, International Union of Aluminum Workers (L.G., March, 1944, p. 288.). The representatives of the applicant unions informed the Commissioner that they were prepared to present their evidence but they first desired to explore the advisability of placing the dispute before the Wartime Labour Relations Board (National) and requested that the application for a Board of Conciliation and Investigation be held in abeyance. On March 12, the report of the Commissioner was received, in which he recommended that the application for the establishment of a Board of Conciliation and Investigation be held in abeyance. The recommendation of the Commissioner was concurred in and the interested parties advised that the application for a Board was being held in abeyance.

Anglo-Canadian Pulp and Paper Mills Limited, Louise Basin, P.Q.—A report was received on March 8 from Mr. Bernard Rose, K.C., who had been authorized as Industrial Disputes Inquiry Commissioner to investigate the dispute between the Anglo-Canadian Pulp and Paper Mills, Limited (Shipbuilding Division), Louise Basin, P.Q., and certain of its employees, members of the Quebec Professional Union of Construction Workers (L.G., March, 1944, p. 287.). The Commissioner recommended that the application for the establishment of a Board of Conciliation and Investigation be denied in view of the fact that the applicant union failed to produce proof that it represented a majority of the employees affected. In his report, the commissioner stated that a letter had been addressed to him

by the applicant union in which it was requested that the application for a Board be withdrawn under reserve of its rights and without prejudice in the making of a new application. The recommendation of the Commissioner was concurred in and the interested parties advised that a Board would not be established.

Settlements

West Coast Shipbuilders, Limited, Vancouver, B.C.—On March 24, the Department was supplied with a draft agreement in settlement of the dispute between West Coast Shipbuilders, Limited, Vancouver, B.C., and its employees, members of eight various trade unions (L.G., March, 1944, p. 288). Honourable Mr. Justice S. E. Richards, who was authorized as Industrial Disputes Inquiry Commissioner to endeavour to arrange a settlement of the dispute, reported that three of the unions, affiliates of the Trades and Labour Congress of Canada, did not sign the contract as they object to the lack of a provision for a closed shop. However, these unions stated they would continue without an agreement and would not cause the company any embarrassment for the present.

Goodyear Tire and Rubber Company of Canada, Limited, New Toronto, Ont.—The Department was advised on March 20, by Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, Ont., who had been requested to endeavour to obtain an agreement without recourse to strike vote procedure in the dispute between Goodyear Tire and Rubber Company of Canada, Limited, New Toronto, Ont., and its employees, members of Local 232, United Rubber Workers of America (L.G., Jan. 1944, p. 51) that he was successful in having the interested parties reach a settlement. The agreement provides for a check-off of union dues, such check-off when authorized by the individual cannot be withdrawn within a period of twelve months.

Anglo-American Telegraph Company, Montreal, P.Q.—On March 12, copies of an agreement, which had been negotiated in settlement of the dispute between the Anglo-American Telegraph Company, Montreal, P.Q., and its employees, members of Local 11, American Communications Association (C.I.O.) (L.G., Nov. 1943, p. 1497) were received in the Department. The agreement was signed by both parties with the understanding that the matter of wages, which the company refused to discuss, would be taken up with the secretary of the National War Labour Board. In view of this situation, the representatives of the applicant union has requested that the matter of the completion of the membership of the Board of Conciliation and Investigation established in this matter be held in abeyance pending the decision of the National War Labour Board.

Goodyear Tire and Rubber Company of Canada, Limited, Bowmanville, Ont.—Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, Ont., who was requested to endeavour to have the parties reach an agreement without recourse to strike vote procedure, in the dispute between the Goodyear Tire and Rubber Company of Canada, Limited, Bowmanville, Ont., and its employees, members of Local 189, United Rubber Workers of America (L.G., March, 1944, p. 288) advised the Department that he was successful in having the company and union reach a settlement.

The agreement provides for a check-off of union dues when authorized by the individual but such authorization is effective for twelve months.

P. D. Bates Company, Limited, Ridgetown, Ont.—Copies of an agreement in settlement of a dispute between P. D. Bates Company, Limited, Ridgetown, Ont., and its employees, members of the Federation of Industrial Workers (C.C.L.) (L.G., Dec., 1943, p. 1648) were forwarded to Department on March 20. The agreement between the company and the union is summarized in the article entitled "Recent Collective Agreements", appearing elsewhere in this issue.

Knechtels, Limited, Hanover, Ont.—The Department has been supplied with copies of an agreement terminating a dispute between Knechtels, Limited, Hanover, Ont., and its employees, members of Local 3, National Union of Furniture Workers (C.C.L.) (L.G., Dec., 1943, p. 1649). The representatives of the applicant union requested that the application for the establishment of a Board of Conciliation and Investigation to deal with this dispute be withdrawn. The interested parties were advised that the application for the establishment of a Board was withdrawn. The agreement between the company and the union is summarized in the article entitled "Recent Collective Agreements" appearing elsewhere in this issue.

Applications Withdrawn

Canadian Pacific Railway Company.—On March 6, at the request of the representative of the applicant union, the application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Canadian Pacific Railway Company, and its employees, members of the Brotherhood of Sleeping Car Porters (L.G., Oct., 1943, p. 1356) was withdrawn on the understanding that this

withdrawal does not prejudice the right of the applicant employees to re-apply for a Board should they desire to do so.

General Engineering Company (Canada), Limited, Scarboro, Ont.—The Department was notified on March 21, by the applicant union, that the Organization wished to withdraw the application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between General Engineering Company (Canada), Limited, Scarboro, Ont., and its employees, members of Local 1, Chemical Workers of Canada (L.G., Jan., 1944, p. 47). The interested parties were advised that the application for the establishment of a Board had been withdrawn.

Report of Board in Dispute between the Johnson Wire Works, Limited, Montreal, P.Q., and its employees

On March 14, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the Johnson Wire Works Company, Limited, Montreal, P.Q., and its employees, members of Lodge 1758, International Association of Machinists (LABOUR GAZETTE, March, 1944 p. 288).

The employer's representative on the Board, while signing the Board report, added a rider having reference to certain classes of employees of the company which he considered should not be covered in any agreement which may result following the recommendation of the Board.

The personnel of the Board was as follows: Honourable Mr. Justice Oscar L. Boulanger, Quebec, P.Q., chairman, appointed on the joint recommendation of the other two members of the Board; Messrs. D. A. Paterson, and Paul Fournier, both of Montreal, P.Q. appointed on the nomination of the employer and employees respectively.

The texts of the report of the Board and the rider follow:

Report of Board

Re: Industrial Disputes Investigation Act and re Dispute between Johnson Wire Works, Limited, Montreal, P.Q., and Employees, members of Lodge 1758, International Association of Machinists.

To the Honourable the Minister of Labour of Canada

The Board was established by Order of the Minister, on January 20, 1944. The Chairman was appointed on February 4, 1944. On February 14, 1944, the Chairman was informed that Mr. Paul Fournier had resigned as a member of the Board and had been replaced by Mr. A. George Smith. The Board met on March 2 and 3 in Montreal, at the Court House, in Room 12, kindly placed at our disposal by Deputy Sheriff Belanger.

Messrs. Charles Johnson and Henry Johnson with Mr. Hugh O'Donnell, K.C., appeared for the Company. Messrs. Adrien Villeneuve, Grand Lodge Representative, International Association of Machinists; G. McKie, President; Antoine Caron, Financial Secretary; and Philippe Dickie, Recording Secretary of Lodge 1758, appeared for the Employees.

The question at issue is the recognition of Lodge 1758 as the Employees' Agent to negotiate with the Company collectively. In the Employees' Application, dated December 17, 1943, and sworn to on December 19, 1943, the dispute is stated as follows:

"The Management of Johnson Wire Works does not want to negotiate the Contract submitted by the Union. The Management submitted one covering the weavers and machinists only. This is not satisfactory to the Union, as the majority of the workers of the shop are members of the Union, and the Union has the right to bargain collectively for them.

Outline of efforts made by parties concerned to adjust the dispute: On October 13, 1943, an Agreement was sent to the Management with a request that an interview be granted to the Negotiating Committee for the purpose of negotiating the agreement. On November 17, 1943, we received a counterproposal from the Management in the form of an agreement covering the weavers and the machinists. On November 20, 1943, the Committee met the Company Representation at which meeting no agreement was reached on the number of workers the contract would cover. Another meeting called on December 11, was cancelled by the Management for the following reason:

'December 10, 1943.

Dear Mr. Villeneuve:—

We feel that nothing can be accomplished by meeting on Saturday, owing to the fact that the new wage control order has not yet been received. Until the provisions of this new order are examined and applied to our case, further discussion would be futile.

We will, therefore, consider the meeting previously arranged for to-morrow afternoon as cancelled.

Yours truly,

THE JOHNSON WIRE WORKS, LIMITED,

(Sgd.) CHAS. JOHNSON.

We feel that the new Law will not curtail the right of workers to be organized but will make it mandatory for the Management to

deal with the organization the workers belong to, for this reason; we feel justified to request that the machinery established by the Department of Labour be set in motion to iron out this matter, which is now two months old."

The Company carries on the highly specialized industry of wire weaving and at the present time employs 153 persons. It is an old established concern and has been in the Johnson family for four generations.

At the outset of our investigation the Company conceded that the Lodge controlled the majority of the Employees in three departments of the plant. It doubted the majority control of the Lodge in one other department. But the Company declared its willingness to enter into negotiations and to conclude a collective agreement with the Lodge, should the latter prove conclusively that it has the right to speak and act for the majority of the Company's employees. Mr. Villeneuve presented a Brief (annexed) in which the point of view of the Employees was expressed.

At the next sitting of the Board, Mr. Villeneuve furnished the Board with sufficient documentary evidence to establish without question the majority control of the Lodge in the doubtful department. The membership evidence was checked against a list of employees which the Company gave the Board. At the conclusion of the hearing not only was the Board satisfied that the Employees had proved this case, but the Company was also satisfied of it and announced its intentions of resuming the negotiations with its employees without even waiting for the unanimous Report of the Board.

Our task, therefore, has been made very easy by the exemplary good will, reasonableness and co-operation of both parties who came before the Board not as enemies prepared to fight to the bitter end for their claims but as disagreeing friends who know that there must be a common ground where they can meet and settle their difficulty. We cannot commend too much such an attitude and we thank both the Company and the Employees for it, expressing the hope that the good example may be followed often for the greater benefit of industry, labour and the country.

Conclusions and Recommendations

As the result of our investigation we find that the majority of the employees of the Company are members of Lodge 1756 of the International Union of Machinists and that the Lodge, therefore, is entitled to speak, act, deal, negotiate and bargain for the employees collectively.

We recommend that the Lodge be recognized as the bargaining agent of the Employees for the conclusion of a Collective Labour Agreement with the Company.

Respectfully submitted.

Montreal, March 6, 1944.

(Sgd.) J. Oscar Boulanger,
Chairman.

(Sgd.) A. G. Smith,
Member.

(Sgd.) D. A. Patterson,
Member.

Montreal, March 13, 1944.

Re: *Industrial Disputes Investigation Act and* re *Dispute between the Johnson Wire Works Co. Ltd., and its employees, members of Lodge 1758 of the International Association of Machinists.*

The Honourable Humphrey Mitchell,
Minister of Labour,
Department of Labour,
Ottawa, Ont.

Sir,

I have signed the Report of the Board of Conciliation appointed herein because the members of the Board were practically in complete agreement on the matters at issue and as to the recommendation which should be made under the circumstances.

However, I find it necessary to submit a rider to the Report and this action of mine is rendered necessary because of the Employer-Company and its desire to be absolutely fair in its dealings with all categories or sections of its employees.

Within the plant there are five very small Departments employing in all some 30 to 35 men. Those Departments are known as:—

Die Department
Dandy Department
Seaming Department
Finishing Department, and
Carpentry and General Department.

The employees therein are almost completely opposed, at the present time, to being controlled by a labour association of which they are not members. As a consequence, the Employer-Company, in order to meet their susceptibilities, respectfully insists that they must be excluded from the scope of any agreement which may result between the Company and the union following upon the recommendation of the Report.

It is pointed out that not only are the men not members of the union but the nature of the work done by them differs materially from the general operations of the plant.

It is believed that the representatives of the Lodge are in agreement with what is herein proposed, Mr. Johnson of the Company and they having discussed the matter previously to the sittings of the Board.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) D. A. PATTERSON,
Member.

Report of Board in Dispute between Horseshoe Lake Mining Company, Ormiston, Sask., and its Employees

On March 19, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Horseshoe Lake Mining Company, Ormiston, Sask., and its employees, members of Local 2, Sodium Sulphate Workers' Union (C.C.L.) (L.G., March 1944, p. 287).

The personnel of the Board was as follows: His Honour Judge J. H. McFadden, Arcola, Sask., Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board; Mr. D. S. MacDonald, Regina, Sask., and Professor John E. L. Graham, Winnipeg, Manitoba, appointed on the nomination of the employer and employees respectively.

The report of the Board was signed by the chairman and Professor Graham. Mr. MacDonald submitted a minority report.

The texts of the report of the Board and the minority report follow:

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between Horseshoe Lake Mining Company, Ormiston, Saskatchewan, and its employees, members of the Sodium Sulphate Workers Union No. 2 (C.C.L.)

The Honourable
The Minister of Labour,
Ottawa, Canada.

SIR.—The Board of Conciliation and Investigation established by you and to which the above dispute has been referred hereby submits its report.

The Board convened at Ormiston, Saskatchewan, on February 28, 1944, all members being present.

The employees (applicants) were represented by: Norman Robert Riches, Moose Jaw, Saskatchewan, Representative of United Steel Workers of America; Everett Lennox, Ormiston, Saskatchewan, President of employees union aforesaid; and Charles Gordon Medley, Ormiston, Saskatchewan, secretary-treasurer of employees union aforesaid.

The employer was represented by: Alfred William Watson, Ormiston, Saskatchewan, its superintendent, and by consent of both parties and of Board, R. W. Hugg, K.C., of Regina, Saskatchewan, appeared as Counsel for the employer.

The nature and cause of the dispute, as set out in the employees application for the establishment of the Board, and which reads as follows: "The Company refuses to meet the negotiating committee of the Union for the purpose of negotiating a collective bargaining agreement to cover wages, hours of work and conditions of employment" was then referred to and discussed for the purpose of ascertaining whether or not under Section 23, (2) of the Act some other matter or matters involved in, or incidental to, those appearing in the application, such as hours of work or conditions of employment, were to be considered by the Board and it was agreed by both parties that the only matter for the consideration of the Board was as to whether or not the employer should recognize the employees union and meet its negotiating committee for the purpose of negotiating a collective bargaining agreement to cover wages, hours of work and conditions of employment.

The dispute, insofar as the within inquiry is concerned, having narrowed down as aforesaid, the inquiry was thrown open for informal discussion between all parties concerned with the view that a settlement of the dispute might be brought about. The Board brought to the attention of those present Order in Council No. 2685 wherein are embodied certain recommended principles for the avoidance of labour unrest during the war and expressed the hope that an amicable settlement of the dispute might be reached. Mr. Hugg, on behalf of the employer, put his principal's case as follows:

> "The representatives who have made complaint have not been certified to the Company as bargaining representatives. The new labour code has now been issued and while it is not yet in effect such code provides for certification of bargaining representatives by a wartime labour relations Board. (Sec. 8).
>
> The code further provides that when bargaining representatives have been certified the parties shall negotiate in good faith and make every effort to conclude a collective agreement. (Sec. 10).

The Company will be bound by such code when same comes into effect and will not object to this Board making a recommendation that when collective bargaining representatives have been certified the Company enter into negotiations with such representatives."

Mr. Riches, on behalf of the employees (applicants) stated that he could not accede to Mr. Hugg's suggestion and took the stand that the inquiry must be dealt with under the Industrial Disputes Investigation Act.

The parties having failed to reach an agreement the Board proceeded to hear evidence. Such evidence and the comparing by the Board of the union's membership with the Company's list of employees established to the entire satisfaction of all members of the Board the facts as set out in paragraphs 1, 2, 3 and 4, immediately following, namely:

1. That the employer company has in its employ a total of 44 persons including its Superintendent and others engaged in supervisory capacities.
2. That 33 of such 44 employees are members in good standing of the said Sodium Sulphate Workers Union No. 2 (C.C.L.)
3. That 27 of the said 33 became members of the said Union in May, 1943; 2 in November, 1943, and 1 in December, 1943.
4. That the forms of application for membership in the said Union which the 33 employees completed and which applications were accepted by the Union contained a provision whereby the applicants authorized the Union to represent them in any negotiations concerning wages and working conditions with their employers.

All members of the Board, having intimated to the parties that they had for the time being arrived at the above conclusions and that in all likelihood such would also be among their final conclusions, it was agreed by all concerned that the inquiry adjourn until the following day at which time it continue at the Hotel Saskatchewan, Regina, Saskatchewan. In the meantime, at the Board's suggestion, Mr. Hugg agreed to further communicate with his principal and ascertain whether or not in view of the Board's conclusions as aforesaid it would not recognize the Union for the purposes already stated.

On February 29, 1944, the Board, all members being present, continued its inquiry at Regina, the employees being represented by Mr. Riches and the employer by Mr. Hugg. Mr. Hugg reported that he had communicated with one of the executive officials of his principal and was advised that the Company feels that the government's policy is crystallized in the labour policy of the government as already outlined by him, Mr. Hugg, and feels that that is the way negotiations should be carried on. Consequently, it became evident that the parties were unable to arrive at a settlement of their dispute.

The Board, having come to the definite conclusion that the said Union does represent the substantial majority as aforesaid of the company's employees, is of opinion that the employer should now recognize the said Union for the purposes as aforesaid stated. The right of employees to organize themselves into trade unions and the recommended principle that employees, through the officers of their trade union or through other representatives chosen by them, should be free to negotiate with employers or the representatives of employers' associations concerning rates of pay, hours of labour and other working conditions with a view to the conclusion of a collective agreement (and which to the Board seems a fair and just principle) are specifically set out in Order in Council No. 2685 already referred to. That right, it seems to us, carries with it the implication that when a Union or its representatives speak for a clear majority of the employees of any particular employer, as we find to be the case herein, the employer at all times, and more particularly in time of war and to assist in the successful prosecution thereof, should recognize and negotiate with the officers of the Union or with other representatives chosen for that purpose, otherwise the employees' action in banding themselves together into properly constituted associations would be futile and but an idle gesture. The aforesaid implication appears to have been put in definite terms in P.C. 1003, Wartime Labour Relations Regulations (Labour Code) to which reference has already been made. It is clear, however, that, under Section 48 (1) of such Regulations, the Industrial Disputes Investigation Act continues to be applicable to the within inquiry and due to such specific provision in such Regulations, and on the merits of the case, the Board feels that the stand taken by the employer is not well taken. In fact, the Board feels that the making of the said Wartime Labour Relations Regulations providing for a majority to represent all employees and further providing that pending applications, such as this, under the Industrial Distputes Investigation Act, are to continue under such Act, should but induce the employer herein to meet the negotiating committee of the said Union for the purposes aforesaid. The said Wartime Labour Relations Regulations having specifically excepted from the operation of its provisions all applications, this being one, pending under the Industrial Disputes Investigation Act, this inquiry must, we think, be dealt with under such Act, and no attempt should be made to have the merits of the case determined under such Regulations, where such Regulations, by specific provision, have excluded all cases pending under the Industrial Disputes Investigation Act.

The Board finds that the cause of the dispute herein is the employer's unwillingness to recognize the said employees' Union and for the reasons as above set out the Board recommends that the said Sodium Sulphate Workers Union No. 2 (C.C.L.) be recognized by the said employer as a collective bargaining agency on behalf of the said employees, and that the employer forthwith enter into negotiations with the negotiating committee of that Union with a view to the concluding of a collective bargaining agreement between said employer and employees.

Dated this 10th day of March, A.D. 1944.

(Sgd.) J. H. McFadden,
Member and chairman of the Board

(Sgd.) John E. L. Graham,
Member of the Board

Minority Report

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between Horseshoe Lake Mining Company, Ormiston, Saskatchewan, and its employees, members of the Sodium Sulphate Workers Union No. 2 (C.C.L.).

The Honourable
The Minister of Labour,
Ottawa, Canada.

Sir:

I do concur with the majority report of the Board in that the said Union does represent the substantial majority of the Company's employees and should represent the employees in any negotiations with the employers.

I could agree with the majority report of the Board that the employer enter into negotiations with the employees under the Industrial Disputes Act if it were not for the imminent passage of the Wartime Labour Relations Regulations.

I consider that it is not beyond the authority of this Board as given in Section 24 of the Act to recommend that negotiations between employer and employees be carried out under the Wartime Labour Relations Regulations and I so recommend believing that better relations between the employer and employees will exist under the new regulations and the right settlement of the problems should then be less difficult to attain.

Dated this 11th day of March, A.D. 1944.

(Sgd.) D. S. MacDonald,
Member of the Board.

Conciliation Work of the Industrial Relations Branch During March, 1944

DURING the month of March officers of the Industrial Relations Branch were called upon to handle 70 industrial disputes or controversial situations involving 20,364 workpeople employed in 114 different establishments. Of these, 49 were new disputes which originated during the month while 21 were situations which had been unterminated as at February 29 and received further attention in March.

The disputes and situations referred to were dealt with under the provisions of the Conciliation and Labour Act and were in addition to those described on previous pages, which received attention under the Industrial Disputes Investigation Act.

Industrial Relations officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, N.B., and Sydney, N.S. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation service; two officers in Montreal are assigned to the Province of Quebec and two officers resident in Fredericton, N.B., and Sydney, N.S., represent the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Summaries of some of the disputes in which mediation took place, together with the union representation votes conducted during March, will be given in next month's issue. A statistical analysis of the situations handled is given below.

Classified by industries, the disputes occurred as follows:—

MINING:	
Coal mining	11
Metal mining	1
Non-metallic (other than coal)	1
MANUFACTURING:	
Animal food products	4
Metal products	19
Textile, clothing products, etc.	1
Pulp & Paper products	2
Wood products	1
Shipbuilding	9
Non-metallic minerals, chemicals, etc.	2
Fur and leather products	2

CONSTRUCTION:	
Buildings and structures	2
TRANSPORTATION:	
Steam railways	2
Water	3
Local and highway	4
Air	1
Miscellaneous	1
TRADE	1
SERVICE:	
Public administration	2
Business and personal	1

Classified as to type of situation, the disputes were broken down as follows:—

NATURE OF DISPUTE:	
Strikes or lockouts	12
Threatened strikes	12
Controversies	30
Controversies involving services of Commissioners	4
Arbitrations	2
Requests for votes by joint consent	10
PREDOMINANT CAUSE OR OBJECT:	
Increases in wages	9
Decrease in wages	1
Other causes affecting wages or working conditions	9
Recognition of union	22
Employment of union members only	3
Discharge of workers for union membership or activity	9
Union jurisdiction	3
To secure or maintain union conditions	1
PREDOMINANT CAUSE OR OBJECT—*Con.*	
Discharge of workers, other than in connection with union questions	7
Employment of particular persons	1
Unclassified	5
DISPOSITION:	
Strike terminated by mediation or other Departmental action	9
Threatened strike averted by mediation	8
Controversy averted by mediation	11
Election or vote conducted	7
Industrial Disputes Inquiry Commissioner appointed	4
Agreement signed following mediation	3
Referred to National War Labour Board or Regional War Labour Boards	3
Referred to Wartime Labour Relations Board	4
Referred to Provincial authorities	3
Other disposition	5
Unterminated	11
Dispute lapsed	2
RESULTS:	
In favour of employees	13
In favour of employer	11
Compromise or partially successful	9
Indefinite or unterminated	30
Not known	7
METHOD OF SETTLEMENT:	
Conciliation or mediation	38
Direct negotiation	4
Arbitrations	1
Technical services	8
Investigation only	11
Settlement pending	11

Canadian Railway Board of Adjustment No. 1

Summary of Decisions

REPORTS have been received covering the following cases heard by the Canadian Railway Board of Adjustment No. 1. Summaries of earlier decisions appeared in the LABOUR GAZETTE, 1942, pp. 666 and 1130, and in the issue for February, 1944, p. 189. The eighth report of the proceedings of the Board covering the period from October 1, 1939, to September 30, 1942 was recently issued as Bulletin No. 15.

The Board was established under a voluntary agreement concluded in 1918, between the several railway companies and certain of the railway organizations. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railways and six representatives of labour, one from each of the following Railway Brotherhoods: The Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 515.—Canadian National Railways (Central Region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

Engineer and fireman, assigned to pool freight service were ordered to make a special service run to handle a passenger extra on a return trip to their home terminal. Claim was made for freight rates for the entire trip, which claim was denied by the Company and compensation allowed at passenger rates.

Briefs were presented to the Board by representatives of the employees and also of the company and in addition oral evidence was given.

The Decision of the Board sustained the contention of the employees.

Case No. 516.—Canadian National Railways (Central Region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

Claims were submitted by two engineers and two firemen for "a minimum day" for light movement of locomotives to and from two stations, approximately 13 miles apart to turn locomotives, facilities for turning being temporarily lacking at the point of departure.

The "Joint Statement of Facts" covered in detail the involved local situation, together

with the contentions of the representatives of the employees and the Company. In addition to these, oral evidence was presented to the Board.

In its statement the Board expressed the opinion that the employees were entitled to "a minimum day" for light movement of locomotives between the stations mentioned in the Joint Statement, for the purpose of turning locomotives or motor coaches.

The claim of the employees was, therefore, sustained.

Case No. 517.—**Canadian National Railways (Atlantic Division) and the Order of Railway Conductors and the Brotherhood of Railway Trainmen.**

This case concerned the method of payment of conductor in charge of light engine moved between two stations 124 miles apart, and returning deadhead. The employees' representatives, in their written contention, claimed that because of certain technicalities in the instructions given the employee, the Company should have paid the employee for overtime rather than coupling deadheading with service and making payment on a continuous time basis. Argument was presented by the Company to refute this claim. In addition to presenting formal briefs, both the employees' and the Company's representatives gave additional oral and written evidence before the Board.

The Board in its Decision sustained the employee's claim.

Case No. 518.—**Canadian National Telegraphs (District 2) and the Order of Railroad Telegraphers.**

The point at issue was in connection with the appointment of a Plant Inspector at an important railway Divisional point.

Several applications were received for the position and in making the appointment the Company, for what it considered sufficient reasons, decided to disregard the factor of seniority and appointed an applicant who was ten years junior to one of the other applicants.

Both the representative of the Order of Railroad Telegraphers and the Company presented written and oral evidence in support of their respective cases.

The Board in its general statement declared that in view of all the circumstances in the case, it was of the opinion that the existing status of the two employees involved should not be disturbed and the contention of the employees was not sustained.

Case No. 519.—**Canadian National Railways (Central Region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.**

Claim of engineer and fireman for continuous trip on a run involving night stop-over en route.

The employees supported their claim by quoting from Article 31 Clause (*c*) of Engineers' and Firemen's schedule as follows: "when engineers and firemen are tied up between terminals, they shall be paid continuous time until engine arrives at arriving terminal". The Company claimed that the run was virtually two runs, inasmuch as it was essential for the crew to break the run at some intermediate point to book rest. Consequently, the rest period should not be included in the compensated time for service.

Representatives of both parties in the disagreement presented additional evidence to the Board.

The Board decided that the contention of the employees was sustained.

Strikes and Lockouts in Canada During March, 1944

DURING the month the number of strikes and lockouts in Canada, the number of workers involved and the time loss in man-working days decreased sharply as compared with the previous month and with March, 1943. Preliminary figures show 13 strikes in existence for March, 1944, involving 1,680 workers and causing a time loss of 3,080 days, as compared with 19 strikes for February, with 8,785 workers involved and a time loss of 39,868 days. For March, 1943, there were 27 strikes, involving 16,993 workers with a time loss of 30,822 days.

For the first three months of 1944 preliminary figures show a total of 54 strikes on record, involving 18,515 workers and causing a time loss of 66,356 man-working days, as compared with 85 strikes, with 39,159 workers involved and a time loss of 221,838 man days, for the same period last year.

Two strikes, involving 45 workers, were carried over from February and eleven commenced during March. Of these 13 strikes, all of which were terminated during the month, two were in favour of the workers, four in favour of the employers, four were compromise settlements and three were indefinite in result, work being resumed pending final settlement.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to one dispute of this nature, namely: fur factory workers, Quebec, P.Q., one employer, May 12, 1943.

STRIKES AND LOCKOUTS IN CANADA, JANUARY TO MARCH, 1943-44

Date	Number of Strikes and Lockouts		Number of workers involved		Time loss in man-working days
	Commencing during month	In existence	Commencing during month	In existence	
*January, 1944	26†	26	8,140†	8,140	23,408
*February, 1944	17	19	8,740	8,785	39,868
*March, 1944	11	13	1,635	1,680	3,080
Cumulative totals	54		18,515		66,356
January, 1943	33†	33	19,860†	19,860	166,715
February, 1943	27	31	2,611	5,239	24,301
March, 1943	25	27	16,688	16,993	30,822
Cumulative totals	85		39,159		221,838

* Preliminary.

† Strikes unterminated at the end of the previous year are included in these totals.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is seldom encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss in caused, but a separate record of such strikes is maintained in the Department and the figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1944*

Industry, occupation, and locality	Number involved		Time loss in man-working days	Particulars†
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to March, 1944				
TRADE—				
Seed packers, Brandon, Man.	1	35	35	Commenced February 22, 1944; for increased wages, reduced hours and improved working conditions; terminated March 1; conciliation, provincial; compromise.
SERVICE—				
Business and Personal—				
Hotel employees, Edmonton, Alta.	1	10	100	Commenced October 1, 1943; for payment of wage increases for porters as approved by RWLB‡; lapsed by March 18 (employment conditions no longer affected); in favour of employer.
Strikes and Lockouts Commencing During March, 1944				
MINING—				
Coal miners, Kaydee, Alta.	1	53	500	Commenced March 1; for improved boarding house and working conditions; terminated March 11; negotiations; in favour of workers.
Coal miners, East Coulee, Alta.	1	115	115	Commenced March 10; misunderstanding *re* order given by mine manager (resulting in man-trip operator going home); terminated March 10; conciliation, federal; in favour of employer.

Strikes and Lockouts Commencing During March, 1944—*Concluded*				
MINING—*Con.*				
Coal miners (stripping), Corbin, B.C.	1	92	450	Commenced March 10; for union recognition and wage adjustments; terminated March 15; conciliation, federal, and return of workers pending reference to WLB‡ *re* wages; (union agreement secured) compromise.
Coal miners, Stellarton, N.S.	1	138	167	Commenced March 11; against deductions from pay of 14 miners who quit work before end of Saturday afternoon shift; terminated March 14; return of workers; in favour of employer.
MANUFACTURING—				
Rubber and Its Products—				
Tire factory workers, Kitchener, Ont.	1	*(a)*80	160	Commenced March 9; alleged discrimination in deduction from pay of union representative for overstaying lunch period; terminated March 10; conciliation, provincial; compromise.
Textiles, Clothing, etc.—				
Cotton factory workers, Cornwall, Ont.	1	88	88	Commenced March 3; against change in time of payment of wages; terminated March 4; negotiations; compromise.
Garment factory workers, Hull, P.Q.	1	18	100	Commenced March 23; against change from piece work to hourly rates of pay; terminated March 31; conciliation, provincial; in favour of employer.
Metal Products—				
Steel mill workers (maintenance men), Sault Ste. Marie, Ont.	1	165	300	Commenced March 25; for time and one-half for work on Sunday irrespective of number of shifts worked during week; terminated March 26; return of workers pending reference to NWLB‡; indefinite.
Automotive parts factory workers, Point Edward, Ont.	1	475	800	Commenced March 27; for a signed union agreement; terminated March 28; conciliation, federal, and return of workers pending further negotiations; indefinite.
Shipbuilding—				
Shipyard workers, Weymouth, N.S.	1	161	200	Commenced March 16; for same wages when hours reduced from 10 to 8 per day, time and one-half after 8 hours and double time on Sundays; terminated March 17; conciliation, provincial, and return of workers pending decision of RWLB; indefinite.
Pipefitters, Montreal, P.Q.	1	250	65	Commenced March 17; against inconvenience in registering time in new temporary building; terminated March 17; negotiations; (extra time allowed) in favour of workers.

* Preliminary data, based where possible on direct reports from parties involved, in some cases incomplete; subject to revision for the annual report.

† In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

‡ RWLB—Regional War Labour Board; WLB—Western Labour Board; NWLB—National War Labour Board.

(a) 400 indirectly affected.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1943." The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in January was 203 and 11 were still in effect from the previous month, making a total of 214 disputes in progress during the month, in which 89,600 workers were involved, and the time loss for the month was 232,000 working days. Of the 203 disputes beginning in January, 34 arose out of demands for increases in wages, 73 over other wage questions, 6 on questions as to working hours, 15 on questions respecting the employment of particular classes or persons and 75 on other questions as to working arrangements.

United States

The number of disputes beginning in February was 330, involving 115,000 workers, with a time loss of 470,000 man working days.

Collective Agreements in the United States

THE National Industrial Conference Board of New York has published the report of a study on *Collective Bargaining Developments and Representative Union Agreements* (Studies in Personal Policy, No. 60).

Some of the more important developments during the past ten years are outlined. The value of accurate information and of Government conciliation services in reaching satisfactory working agreements is being more generally recognized by both sides:—

> Much of the controversy and confusion of these years developed because, in many instances, neither side had sufficient knowledge of the situation. Frequently, employer and employee representatives with inadequate facts and figures struggled bravely but unsuccessfully to settle the difficulties. As a result, sheer emotion often held sway, and collective bargaining negotiations were deadlocked. . . . Little by little, both labour and management began to adopt a more scientific approach to the problems of industrial relations. Within their own ranks, several important unions and industrial concerns began to collect and correlate information essential to mature collective bargaining. . . . At the same time, the services of government mediation and conciliation agencies became more widely accepted.

Maintenance of membership and closed and union shop provisions are discussed in detail. Charts show: (1) the proportion of organized workers by industries covered by the various types of union clauses (closed shop, union shop, maintenance of membership, preferential hiring and sole bargaining agent); and (2) the proportion of workers, by size of company, covered by formal grievance plans operating through a union and those operating otherwise than through a union as well as the proportion not covered by any plan. About 45 per cent of the organized workers in the United States and Canada are covered by closed or union shop provisions and for about 65 per cent there is a formal grievance plan operating through a union.

The text is given of 19 representative union agreements, eight each from the American Federation of Labour and the Congress of Industrial Organizations and three from independent organizations. The occupational groups covered include electricians, freight handlers, shipyard workers, employees of public utilities, office workers, electrical workers, automobile workers, steel workers, rubber workers and cotton workers.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated. Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods, etc.

REGINA, SASK.—CERTAIN BAKERIES AND THE BAKERY AND CONFECTIONERY WORKERS INTERNATIONAL UNION, LOCAL 428.

Agreement to be in effect from November 20, 1943, to November 19, 1944, and thereafter from year to year, subject to notice. No discrimination on account of union activity. All employees to become union members within 90 days and to remain members while employed by the company. The union label to be furnished by the union when required.

Hours: 50 per week. Overtime at time and one half.

Vacation: one week with pay for those with over one and under three years' service; two weeks to those with at least three years' service. Minimum weekly wage rates; foremen $27.50, doughmen and ovenmen $25.50, bench hand and machine hand $23.50, shipper $18.90; apprentices $12 to $18.90; truck drivers, relief outside salesmen, special delivery men, male bread wrappers $18.90; stablemen $20 and outside route salesmen $20 ($18.90 for first 90 days); engineer $30, janitor $23; inside sales persons and female finishers, wrappers and packers $12 and $14, with $1 increase every six months to $18. A cost of living bonus to be paid. One apprentice allowed to four journeymen or fraction thereof. Provision is made for the settlement of disputes.

Manufacturing: Rubber and its Products

BOWMANVILLE, ONTARIO—THE GOODYEAR TIRE AND RUBBER COMPANY OF CANADA LIMITED AND THE UNITED RUBBER WORKERS OF AMERICA, LOCAL 189.

Agreement, reached with the assistance of an officer of the Department of Labour, to be in effect from March 18, 1944, to March 17, 1945, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency. Check-off: the company will deduct from wages and pay over to the union, union dues for any employee giving his written consent.

Hours: those on 8-hour shifts, 8 hours per day, 5 on Saturdays, a 45-hour week; those on 8½-hour shifts, a 51-hour week; those on 9-hour shifts, 9 hours per day, 5 on Saturdays, a 50-hour week; 10-hour shifts are applicable to the machine shop and are for five 10-hour shifts, a 50-hour week, at night. Overtime is payable at time and one half. Payment for work on legal holidays and vacations with pay are mentioned in the agreement as being covered by "general letters" which are not attached to the agreement. For work on legal holidays, regular wages to be paid in addition to the payment as provided in the "general letter". Wage rates are those approved or to be approved by the Regional War Labour Board. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Fur and Leather Products

LONDON, ONTARIO—C. S. HYMAN COMPANY, LIMITED, AND LEATHER WORKERS' ORGANIZING COMMITTEE, NO. 25.

Agreement reached following the application for a board under the Industrial Disputes Investigation Act and the taking of a representation vote. Agreement to be in effect from January 17, 1944, to June 30, 1945, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency. Employees may join or refrain from joining the union.

Hours: for day shift, 9 per day, 5 on Saturdays, a 50-hour week; for night shift, 9 per shift, 6 nights, a 54-hour week; for engine room staff 50 per week (shift work). Overtime: subject to the approval of the National or Regional War Labour Board, all overtime and all work on holidays and on Sundays (except when part of a regular shift) is payable at time and one half. A rest period of 10 minutes once a day is allowed. Vacation: one week's annual vacation with pay to employees with one year's service. The wage rates will form part of the agreement when approved by the National or Regional War Labour Board. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Textiles and Clothing

TORONTO, ONTARIO—TORONTO ASSOCIATION OF MERCHANTS TAILORS AND JOURNEYMEN TAILORS UNION OF AMERICA, LOCAL 132, DEPARTMENT OF AMALGAMATED CLOTHING WORKERS OF AMERICA.

Agreement to be in effect from October 1, 1943, to September 30, 1944. Employers agree to a

"preferential union shop" under which application will first be made to the union for additional workers.

Hours: 44 per week. Overtime is payable at time and one half; double time for work on holidays. Vacation: one week with pay to workers with one year's service. Wages: a scale of piece rates forms part of the agreement. Provision is made for the settlement of disputes.

Service: Public Administration

WINDSOR, ONTARIO—CITY OF WINDSOR AND CIVIC WORKERS' UNION, LOCAL 82.

Agreement to be in effect from December 31, 1943, and thereafter subject to 30 days' notice. The city recognizes the union. All employees except office staff and general superintendent must be union members.

Hours: 8 per day, 44 per week. Regular employees after one year's service to be paid for the legal holidays. Vacation: employees with one year's service to have two weeks vacation with pay; those with six months' service, one week. Sick leave: for employees with at least one year's service, one month's sick leave with pay allowed in a year. Seniority rights and grievance procedure are included in the agreement.

REGINA, SASK.—CITY OF REGINA AND CIVIC EMPLOYEES ASSOCIATION, LOCAL 21.

Agreement to be in effect from January 1, 1943, subject to 3 months notice. The city will deal with any committee of the association. Seniority rights and grievance procedure are provided for. Overtime: for those on a monthly basis, equivalent time off to be given or overtime pay on a *pro rata* basis; for those on an hourly basis, time and one half for the first 5 hours and double time thereafter. Vacation: for those with one year's service, three weeks with pay. Holidays: permanent and seasonal employees to be paid for all holidays which fall in the period of employment. Sick leave: 12 days per year allowed.

Light and Power Department

For outside electrical employees—Hours: 8 per day, 4 on Saturdays, a 44-hour week except those on shift work; double time for work on weekly day of rest or holidays. Hourly wage rates: linemen 72½ to 87½ cents, journeymen 92½ cents, journeymen with cable experience 97½ cents, mechanics and utility men 65 cents, groundmen 60 cents, street light attendants 70 cents, sub-station operators 76½ cents, meter testers and repairmen 65½ to 82½ cents, meter installers 63½ to 82½ cents, office staff, $105 to $195 per month.

For power house employees—Hours: 8 per day, 4 on Saturday, a 44-hour week; double time for work on weekly day of rest or holidays. Wages: operating engineers $180 to $200 per month, boiler room operators $160 and $170, other operating employees 50 to 71 cents per hour; maintenance employees: plant electricians $200 per month, mechanics and machinists 74 and 84 cents, electrician's assistant 71 cents, mechanics' and fitters' assistants 64 cents, office staff $175 and $200 per month.

Engineer's Department, Cleansing Division

Foremen are paid $125 to $180 per month. For general staff, hours are 9 per day, a 50-hour week for day work and a 54-hour week for night work. Hourly wage rates: chief maintenance man 70 cents, motor broom operator 70 cents, flusher operator 60 cents, truck drivers and utility men 55 cents, teamsters 52 cents, labourers 45 to 54 cents; incinerator firemen $130 and $135 per month, incinerator labourers 47 cents, truck helpers 45 cents with a 47-hour week; street cleaners 45 cents per hour with a 44-hour week.

Engineer's Department, Works Division

Wage for foreman, $120 to $180 per month. For general staff, a 44-hour week. Wages: steam rollerman $120 per month, motor patrol operators 60 and 62½ cents, tractor operators and air drill operator 55 cents, steam boilermen, asphalt rakers and cement finishers 60 cents, truck drivers 55 cents, material man at asphalt plant 50 cents. For sewage disposal works, a 44-hour week with $125 per month for plant operators and utility men and 50 cents per hour for teamsters. Skilled seasonal and casual labour 45 cents.

Parks Department

Hours: 8 per day. Wages: foreman $160 to $180 per month, mechanic $145, carpenter and utility man $135, truck driver $114, gardener $120, leadmen for parks, boulevards, nursery, cemetery $100 to $130, labourers 45 cents.

Waterworks Department

Hours: 8 per day, 44 per week. Wages: foreman $150 and $185, meter mechanics $130, mechanic and truck driver 55 cents, skilled labourer 52 to 60 cents, labourer 45 cents, supply department water attendants $110 and $130, pump attendant $105 and $130.

Service: Business and Personal

VANCOUVER, B.C. CERTAIN RESTAURANTS AND THE HOTEL AND RESTAURANT EMPLOYEES UNION, LOCAL 28.

Agreements made on various dates in 1943, to be in effect to June 1, 1944, and thereafter from year to year subject to notice. All employees must be union members and all help be hired through the union office. Upon authorization of his employees, the employer will deduct union dues and assessments from wages of such employees and pay same over to the union.

Hours: 8 per day, 48 per week. No shift to be split more than once and all split shifts to be worked within a spread of twelve hours. Overtime is payable at time and one half. Weekly wage rates for waiters and waitresses: counter (day work) $22.50 for split shift, $21 for straight shift; table (day work) $20 per split shift, $18.50 for straight shift, $2.20 for 4 hours; night shift (straight shifts only) $24, 4-hour shifts $2.20 per shift. Weekly wage rates for bus-boys and bus-girls, $17, 4 hour shift $2. Weekly wages for apprentices (3 months) $16 to $18. Weekly wages for kitchen staff (male and female): dinner cook and pastry cook $35 for split shift, $33 for straight shift; all other cooks and head pantry man $29 for split shift, $27 for straight shift, assistant pantryman $25 for split shift and $23 for straight shifts, vegetable men and cooks' helper $21 for split shift. $20 for straight shift; dishwashers $20 split shift, $18 for straight shift. Vacation: one week with pay to employees with one year's service. Provision is made for the settlement of disputes.

Collective Agreement Act, Quebec

Recent Proceedings under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable to the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, page 86. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the act include the extension of two new agreements and the amendment of six others, all of which are noted below. Requests for amendment of agreements for bakers and retail stores at Magog, and the fur industry at Quebec were published in the *Quebec Official Gazette*, March 11. Requests for the amendment of the agreements for retail stores at Quebec, paper box manufacturing (uncorrugated paper) throughout the province and barbers and hairdressers at Three Rivers were gazetted March 18. Requests for amendment of agreements for clockmakers at Montreal and the tanning industry for the province were gazetted March 25. A request for the extension of a new agreement for municipal employees at Joliette was published in the *Quebec Official Gazette* March 25.

In addition, Orders in Council were published in the *Quebec Official Gazette* during March approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Pulp, Paper and Paper Products

PAPER BOX (UNCORRUGATED PAPER) MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated March 9, and gazetted March 11, amends the previous Orders in Council for this industry (L.G., April, 1939, p. 528, Sept., p. 950; May, 1940, p. 496; Dec., p. 1310; April, 1941, p. 473; June, p. 704; Dec., p. 1572; Jan., 1943, p. 88; July, p. 989, Dec., p. 1702).

Wages: The following minimum hourly rates of wages and operations are added: brightwood machine operators 46 cents in zone I, 43½ cents in zone II; brightwood machine feeders 25 cents in zone I, 23 cents in zone II; operators of corner reinforcing machines 46 cents in zone I, 43½ cents in zone II; feeders of corner-reinforcing machines 25 cents in zone I, 23 cents in zone II; circular saw operators 32 cents in zone I, 30 cents in zone II.

Other amendments do not affect the summary already given.

Manufacturing: Printing and Publishing

LITHOGRAPHING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated February 29, and gazetted March 4, makes obligatory the terms of a new agreement between certain lithographing firms and the Amalgamated Lithographers of America, Local 27, which is to be in effect from March 4, 1944, to December 31, 1944 and thereafter from year to year subject to notice. It applies throughout the province of Quebec.

The terms of this agreement are similar to the one previously in effect (L.G. Dec., 1940, p. 1310; May, 1942, p. 631; Feb., 1943, p. 219, April, p. 490, June, p. 813) with these exceptions:

The rates of 57 cents or more per hour have had added to them 7 cents per hour (i.e. $3.20 per week ÷ 44). Rates under 57 cents per hour have had added to them 12·8 per cent of the rates in effect at December 31, 1943. Under this provision, in the art, camera and plate making departments, as well as for journeymen-pressmen, the increase is 7 cents per hour; in the press department, feeders and feeder operators on four colour sheet-fed presses receive an increase of 11 cents. For feeders and operators in the press department the rates for male employees under 21 years and female employees, are one or two cents less in some cases than those for male employees of 21 years or over. For apprentices in the art and camera departments this difference is from one to 4 cents. For improvers in the plate making department the difference is from one to 4 cents in certain cases, whereas for helpers the differences are 2 or 3 cents.

PRINTING TRADES (NEWS AND JOB) QUEBEC.

An Order in Council dated March 18, and gazetted March 25, amends the previous Order in Council for this trade (L.G. Nov. 1943, p. 1530) but does not change the summary as previously given.

Manufacturing: Metal Products

GARAGES AND SERVICE STATIONS, MONTREAL.

An Order in Council, approved March 18, and gazetted March 25, amends the previous orders in Council for this agreement (L.G., Aug., 1941 p. 1013; April, 1942, p. 483; July, p. 857; July, 1943, p. 990) but does not affect the summary already given.

SHEET METAL MANUFACTURING INDUSTRY, MONTREAL.

An Order in Council, dated March 18, and gazetted March 25, amends the previous Orders in Council for this industry (L.G. Mar., 1943, p. 340, Oct., p. 1381; Jan., 1944, p. 70) but does not affect the summary as previously given.

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.

An Order in Council, dated February 29, and gazetted March 4, extends the term of this agreement (L.G. Nov., 1941, p. 1424; June, 1942, p. 738, Nov., p. 1348; Jan., 1944, p. 70, Mar., p. 359) until April 1, 1944.

ALUMINUM INDUSTRY, LA TUQUE

An Order in Council, approved March 15, and published in the *Quebec Official Gazette*, March 18, makes obligatory the terms of an agreement between the Aluminum Company of Canada Limited, and L'Union internationale des Travailleurs de L'Aluminium, Local 23435 (The International Union of Aluminum Workers, local 23435). Agreement to be in effect from March 18, 1944, to September 16, 1944, and year to year subject to notice.

Hours: 8-hour day, a 48-hour week. Overtime shall be payable at time and one-half.

Hourly wage rates: Engineering and Maintenance: armature winder 78 to 93 cents, boiler operators, blacksmiths, bricklayers, 66 to 88 cents, carpenters 71 to 88 cents, electricians, machinists and millwrights 66 to 93 cents, tradesmen's helpers 56 to 63 cents, general labourers 53 to 56 cents, maintenance men (unskilled) 56 to 68 cents, operators in electrical department 68 to 83 cents, pot connectors 56 to 68 cents, painters 61 to 78 cents, plumbers 66 to 88 cents.

Hourly wage rates in plant operations: potroom operation and control—potmen 68 to 75 cents, cranemen 68 to 75 cents, controlmen 56 to 63 cents, minors 29 to 55 cents; remelting, shipping, distribution and pot lining cranemen 61 to 68 cents, crane hookers 56 to 61 cents, mixermen 56 to 68 cents, pourers 61 to 73 cents.

Hourly wage rates for services:—analyst (routine) 53 to 73 cents, chemist assistant 71 to 83 cents, laboratory assistant 38 to 57 cents, tester 56 to 73 cents, adult female rate (minimum) 40 to 46 cents.

Cost of living bonus has been incorporated with the rates of wages established. Vacation: one week's annual vacation with pay after one year's continuous service, two week's after ten years' service.

Construction: Buildings and Structures

PLUMBERS AND SHEET METAL WORKERS, THREE RIVERS.

An Order in Council, dated March 8, and gazetted March 11, affects the previous Orders in Council for these trades (L.G. March, 1940, p. 283; August 1941, p. 1011; May, 1942, p. 631). Following the Regional War Labour Board decision of August 3, 1943, every employer governed by the present decree shall pay to all their employees of the trades to which the said decree applies an additional 5 cents per hour over and above the basic wage rates actually paid to them.

Training for Industrial Work

THE British Ministry of Labour and National Service recently issued a manual describing the basic principles essential to successful training arrangements and explaining the help which the Ministry can give to employers in their training problems.

Setting up an organized training scheme involves the appointment of a general training supervisor to prepare a training plan. Instructors must be carefully selected for they must not only have technical skill but must also be able to gain the confidence of others and to impart knowledge. Learners must be allocated to the courses which best fit their capabilities, as far as the immediate labour needs of the factory permit. The pamphlet emphasizes that both out-of-date and new untried machines should be avoided in equipping the training department.

Job training, it is pointed out, includes general information connected with welfare and settling-in, knowledge of the job (tools, materials, technical terms, safety, quality requirements), and the correct movements to be used. Movement study implies elimination of all unnecessary movements, the smallest possible movements, the use of both hands conjointly, and the arrangement of materials and tools so that they can be picked up without conscious thought.

A training syllabus should be made to facilitate instruction and to preserve continuity if instructors change. When possible, operations should be presented to the learner in their exact working sequence. A few key points should be stressed until their observance becomes habitual. The manual favours such visual, learning aids as a "museum of faults." Progress records may be utilized during learning as a means of encouragement. Following up workers after they have gone into actual production is essential, and serves a double purpose as a gauge of the efficiency of the training scheme.

The manual suggests that arrangements may be made with the Ministry through the District Man Power Office for an instructor to visit a Government Training Centre in order to study methods of training at first hand. A member of the Ministry's technical staff can be procured by a firm for a short time to assist in setting up training arrangements. In addition, women demonstrators will visit plants to show the degree of skill which women can attain, or to aid in overcoming women's reluctance in doing certain kinds of work.

War Emergency Training

Progress of Enrolment—Reduction in Industrial Training—Training for Armed Forces—Rehabilitation Training

THE War Emergency Training Program provides the following types of training:—

(1) Pre-employment classes in vocational schools for men and women about to enter war industry;

(2) Part-time classes, principally for the upgrading of persons already employed;

(3) Training in plant schools;

(4) Special classes for foremen and supervisors;

(5) Training of enlisted men as tradesmen for the Army, Navy and R.C.A.F.;

(6) Rehabilitation training for persons discharged from the Armed Forces in the present war and referred for training by the Department of Pensions and National Health;

(7) Assistance to certain categories of university students whose services are needed in connection with the war effort.

War Emergency Training is carried on under agreements made by the Dominion Government with each province. The administration is decentralized with a Regional Director in each province. Training is given in technical schools, special training centres and in industrial plants. The provinces and municipalities supply the shop facilities of the technical schools to the Program free of charge. Provincial Governments also pay certain administrative costs and share with the Dominion in the cost of machinery and equipment purchased. All other costs are paid by the Dominion with funds from the War Appropriation.

From the beginning of the program up to February 29, 1944, the gross enrolment in all types of projects has been as follows:—

Training in Industry	206,966
Army	39,370
Navy	7,249
R.C.A.F.	62,927
Rehabilitation (discharged persons from the forces)	2,829
Students	5,254
	324,595

Industrial Training

Approval was given to two additional plant schools during the month of February, but the gross enrolment of trainees in the schools still operating showed a decrease from the previous month. This same reduction in enrolments was also manifest in the full-time pre-employment classes and in the part-time classes for employed persons. On the other hand, there have been an increasing number of requests from industry to participate in the training for foremen and supervisors and reports received from industry that have taken part in this program testify that many concrete and beneficial results have been obtained particularly where there has been an adequate follow-up of the initial training sessions.

Training for the Armed Forces

The enrolment of enlisted tradesmen during February showed a distinct decrease for the Navy, the Army and the Air Force, with the reduction more marked in the case of the last. This reduction was due to the deletion of technical training for ground tradesmen to which reference was made in a previous issue of the LABOUR GAZETTE. Except for one or two special categories no new trainees have been admitted to this type of training since the beginning of January. There was also a slight decrease in the enrolment in the Pre-Aircrew Educational Schools and it is anticipated that the enrolment in this type of school will be still further reduced during the next few months.

Rehabilitation Training

The number of discharged persons from the forces under training at the end of February was 744, an increase of over 100 during the month and constitutes an all-time high for this type of training. Up to the present less than 10 per cent of those enrolled are being trained in industrial establishments but it is expected that this percentage will be substantially increased during the next few months. The necessary steps have been taken to provide additional training facilities as the demand for this type of training increases.

During the last week of February the Vocational Training Advisory Council held its third meeting since its inauguration and was followed by a conference of the Regional Directors and other officials of War Emergency Training. One of the main topics of discussion was the provision of training for members discharged from the armed forces and special consideration was given to the training of women.

TABLE 1—INDUSTRIAL TRAINING IN VOCATIONAL SCHOOLS DURING MONTH OF FEBRUARY, 1944 WITH TOTALS FROM APRIL 1, 1943, TO FEBRUARY 29, 1944

(Subject to Revision)

(1) Trainees in the Part-time Classes consist largely of employed persons who are being given training at the request of employers in War Production who wish to up-grade their employees.

(2) Includes those graduates who, though actually placed prior to February 29, 1944, were not so reported until after February 1, 1944.

(3) The numbers shown as completed, but not reported placed, in the Province of Quebec. (490) includes all unplaced Trainees, who have completed their courses since the commencement of the War Emergency Training Program, in that Province.

Activities of the Unemployment Insurance Commission

Statistical Analysis Covering Unemployment Insurance Benefit[1]—Compliance with Mobilization Regulations Necessary to Obtain Benefit—Veterans' Placement Adviser Appointed

THERE were 12,284 claims for unemployment insurance benefit registered in local offices of the Unemployment Insurance Commission during February. This is the largest monthly total to date and is an increase of 533 over the 11,751 claims received in January. During January and February, 1943, 4,637 and 4,822 claims were filed. It will thus be seen that the increase between January and February this year represents an expected seasonal rise, but the total number of claims recorded each month during the present winter greatly exceeds the monthly totals a year ago.

Of the 11,432 claims sent forward to insurance offices during February, 8,152 were considered entitled to benefit and 6,337 commenced receiving benefit payments. In all, 9,056 persons were paid one or more benefit cheques during February, representing a total of $301,393 for 158,455 days of compensated unemployment. This compares with a total of $129,722 paid to 4,079 persons for 69,082 days in February, 1943.

The average duration of the cases of compensated unemployment was 17·5 days this February, compared with 16·9 days in February, 1943. The average amount paid per beneficiary per compensated day of unemployment in February, 1944, was $33.28 and $1.90 respectively, as compared with $31.80 and $1.88 in February, 1943. (*See* tables 3 and 5.)

Compliance with N.S.S. Mobilization Regulations Essential for Benefit

It was announced early in April by Hon. Humphrey Mitchell, Minister of Labour, that in future male applicants for unemployment insurance benefit must present proof that they have complied with National Selective Service Mobilization Regulations.

Order in Council P.C. 2222, March 30, requires every male applicant for benefit to produce satisfactory evidence, such as birth or marriage certificate that he is not a "designated man" under the military call-up. If he is a designated man he must produce the necessary documents to show that he has complied with Mobilization Regulations.

The Order augments the present nationwide check-up on all civilian men of military age who are subject to the regulations. Similar proof of compliance has been required for some time of men seeking employment through an office of National Selective Service.

Veterans' Placement Adviser

The appointment of Brigadier J. E. Lyon to the position of Veterans' Placement Officer with the Unemployment Insurance Commission at Ottawa was announced toward the end of March. Brigadier Lyon will act as liaison officer with the Departments of Defence and Pensions and National Health. He will also formulate policies, design techniques and advise generally in connection with the return to employment of persons demobilized from the armed services,

Brigadier Lyon received his education in Ottawa schools and at the Royal Military College. He holds certificates as a Dominion and an Ontario land surveyer and served with the Canadian Engineers in France and Belgium in the first Great War. He was made a captain in the permanent force in 1921, and after a two-year course at the School of Military Engineering, Chatham, England, was made District Engineer Officer, M.D. No. 5 at Quebec City in 1925. In 1931-1932 he attended the Imperial Staff College at Camberley, England, and upon his return to Canada was appointed District Engineer Officer M.D. No. 3 at Kingston. From 1936 to September 1940, he was General Staff Officer, Surveys, Ottawa, following which he was appointed General Staff Officer, Operations. In December, 1941, he became Director of Military Operations and Intelligence.

In June, 1942, Brigadier Lyon was sent to Pacific command as Colonel General Staff, and was promoted to Brigadier two months later. He relinquished his duties at Pacific command in March, 1943, on account of ill-health, and in July accepted employment with Coast Construction Company of Vancouver on their contract to construct a new airport for the United States government at Edmonton. Shortly thereafter he was made Comptroller and Executive Officer for the Company, which position he relinquished to accept the appointment with the Unemployment Insurance Commission.

[1] Statistical breakdown, also the base for tables 3, 4 and 5 were supplied by Dominion Bureau of Statistics.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission showed that at April 1, 1944, 138,366 employers with insured employees were registered, and 3,172,617 employees were issued with insurance books.

Registrations according to Regions and for Canada as a whole are shown in the following Table:—

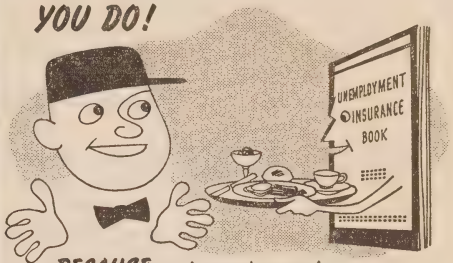
The column "Interest on Investments and Profit on Sale of Securities" represents:—
(a) Interest received on due dates of the various Government Bonds, with proper adjustments being made at the end of each year for interest accrued and amortization charges.
(b) Profit on sales of securities taken into account at the end of each year only.

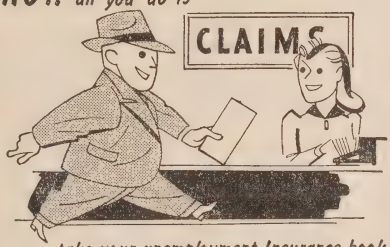
The "Miscellaneous" column includes the following:—

Penalties	$ 1,614 78
Contributions in respect of services in the armed forces	60,340 21
Miscellaneous	1,508 77
	$ 63,463 76



PRINTED IN CANADA

WHAT HAPPENS TO ME WHILE I'M WAITING FOR ANOTHER JOB?



DO I EAT OR DON'T I??

YOU DO!

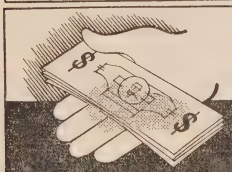
BECAUSE you've made enough unemployment insurance contributions to get cash benefit.

NO!! all you do is

..take your unemployment Insurance book to an Employment and Selective Service office and ask for the claims section.

AND THEN WHAT?

First, they'll register you for work and try to get you a suitable job.



DO I HAVE TO TAKE ANY JOB?

No. The job has to be suitable and as like what you had as possible.

IF THERE'S NO SUCH JOB...

You're entitled to unemployment insurance benefit at the end of 9 waiting days.

HOW MUCH DO I GET?

★ For example: If you have a wife and have been paying 36¢ a week, you get $14.40 a week.

IF YOU ARE SINGLE...

you get 34 times the average weekly amount you have contributed...

IF YOU ARE MARRIED...

you get 40 times the average weekly amount you have contributed... ★

AND HOW LONG DO I GET IT?

If this is your first benefit, you draw for ½ the time you've paid in. So if you've paid for 30 months, you can draw for 6 months...if you need it.

If you've already drawn some benefit, the time is reduced.

Employment and Unemployment

Summary

INFORMATION in this section regarding the employment situation in Canada is based upon reports from the following sources:

The employment situation at the beginning of February, as reported by employers.—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the *trend* of employment in Canada over a period of years.

Returns received from 14,311 co-operating firms indicated a continued curtailment in industrial activity at the beginning of February, their staffs aggregating 1,843,389 persons, as compared with 1,869,151 reported on January 1.

The index number of employment (based on the 1926 average as 100) was 183·1 as compared with 185·7 in the preceding month, and was 1·1 per cent higher than at February 1, 1943.

Information is also embodied in this article concerning payrolls, which is furnished each month by the co-operating firms. The per capita average weekly wage of $31.75 showed an increase from that of $29.69 at the beginning of January while at the beginning of February, 1943, the figure was $29.96.

Report on employment conditions for March.—A summary of employment conditions for the month of March has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service Offices across Canada. These reports describe employment conditions in the Maritime, Quebec, Ontario, Prairie and Pacific Regions.

Applications for employment; vacancies, and placements, February, 1944.—From the Employment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

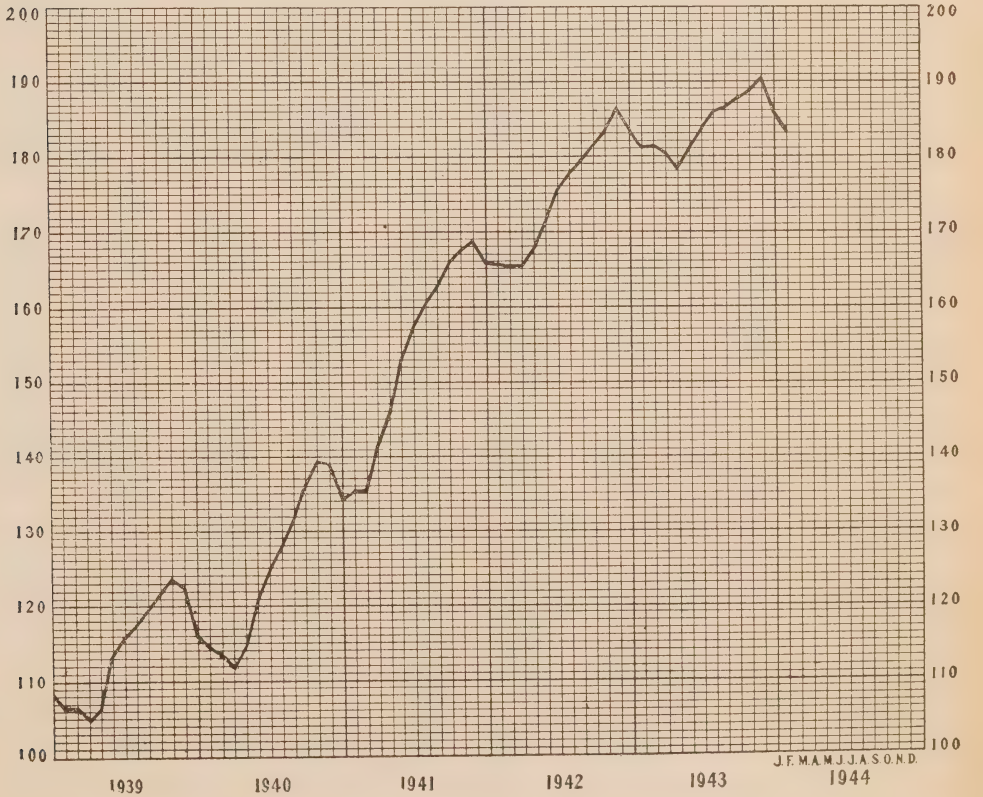
Reports received from Employment and Selective Service Offices during the four weeks February 4 to March 2, 1944, showed slight declines in the average daily placements both when compared with the preceding five weeks ending February 3, and with the period January 29 to February 25, 1943. The most perceptible changes under the first comparison were losses in services, manufacturing, and forestry and logging though minor declines were shown in all other industrial groups except agriculture, and fishing hunting and trapping which remained unchanged. Under the second comparison, all industrial divisions except forestry and logging and trade, registered declines, the most marked being in manufacturing, construction and services.

Unemployment in trade unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

The statistical article summing up the information contained in these reports, formerly run monthly in the LABOUR GAZETTE, will in future appear quarterly. The last monthly article was published in the February issue.

Unemployment as reported by the Unemployment Insurance Commission.—In the article *Activities of the Unemployment Insurance Commission* appears each month a statement showing the number of claims made each month for unemployment insurance benefit.

During February, 1944, 12,284 persons made claim for benefit, as compared with 4,637 in January, 1943, and 4,822 in February, 1943.



The Employment Situation at the Beginning of February, 1944, as Reported by Employers

THERE was continued curtailment in industrial activity at the beginning of February, repeating the situation indicated at midwinter in five of the last six years. Previously, employment had usually, though not invariably, shown partial recovery at February 1 from the year-end lay-offs; the average change in employment between January 1 and February 1 in the period, 1921-1943, has been a slight gain. The 14,311 firms furnishing data to the Dominion Bureau of Statistics at February 1, 1944, reported a combined working force of 1,843,389, as compared with 1,869,151 at January 1. This decline of 25,762 persons, or 1·4 per cent, reduced the index number of employment (1926=100), from 185·7 at January 1, to 183·1 at the date under review, when it was 1·1 per cent higher than the February 1, 1943, figure of 181·2. Since the reduction was contrary to the usual movement at February 1 in the experience of the period, 1929-37, used in calculating the factors of seasonal variation, the seasonally-adjusted index was also lowered, falling from its previous maximum of 192·9 at January 1, to 190·3 at the date under review.

The resumption of normal operations, interrupted in many establishments over the holiday season, brought about a substantial increase in the weekly payrolls reported at the beginning of February. These aggregated $58,531,994, as compared with $55,496,961 at January 1. The gain was 5·5 per cent. The per capita average, which had declined from $31.61 at December 1 to $29.69 at January 1, rose to $31.75 at the latest date, the highest in the record. The increase of $2.06 in the weekly earnings at February 1 as compared with January 1 approximated that of $2.04

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

indicated in the same comparison in 1943, when the February 1 average had been $29.96.

Improvement was indicated in manufacturing at the beginning of February, but the gain of 4,778 persons was the smallest at mid-winter in any year since 1933. The increases over January 1 took place wholly in the manufacture of non-durable goods, the largest being in textile and rubber factories. On the other hand, the production of heavy manufactured goods showed a further decline. Non-ferrous metal plants reported the most pronounced reductions, but the trend was also downward in the iron and steel and electrical apparatus industries.

The non-manufacturing divisions, on the whole, afforded less employment at the date under review, when the curtailment was mainly of a seasonal character. There were losses of 4,245 persons in transportation, 18,781 in construction and 12,704 in trade. Communications reported no general change, while logging, mining and services showed greater activity. The gains of 3,295 in logging and 1,536 in mining were contra-seasonal.

Payrolls

The salaries and wages distributed at February 1 by the co-operating employers totalled $58,531,994, exceeding by $3,035,033, or 5·5 per cent, the weekly payroll reported on or about January 1, when the disbursement had been affected by the observance of the year-end holidays. The weekly per capita average earnings advanced from $29.69 at January 1, to $31.75 at the first of February, as compared with $29.96 at February 1, 1943, and $27.65 at February 1, 1942.

The latest survey shows that, including the statistics for financial institutions, the number of persons in recorded employment was 1,908,265, as compared with 1,934,006 at January 1. The sums distributed in weekly salaries and wages among these persons amounted to $60,600,198, while those employed at January 1 received $57,573,526. The per capita average for the nine main industries, including finance, was $31.76, as compared with $29.77 at the beginning of January, and $30.00 at February 1, 1943.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the eight leading industrial cities, and gives comparisons as at January 1, 1944, and February 1, 1943.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. The report indicates that in the period for which data are available, there has been a general increase of 19·8 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these persons are higher by 48·1 per cent. Including finance, the gain in employment from June 1, 1941, to February 1, 1944, amounted to 19·3 per cent, and that in payrolls, to 46·9 per cent.

Between February 1, 1943, and February 1, 1944, there was an increase of 1·1 per cent in employment in the eight industries, accom-

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

panied by that of 6·2 per cent in the weekly payrolls. The explanation previously given for the much greater rise in the latter than in the former may again be stated: (1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work; (2) the payment of cost-of-living allowances to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their absorption into the basic wage rates as from February 15, 1944; (3) the progressive upgrading of employees as they gain experience in their work; and (4) the payment of higher wage-rates in a number of cases.

Mainly as a result of wartime conditions, the expansion in employment and payrolls in manufacturing in the period of observation has been much greater than that in the non-manufacturing industries, the index of employment in factories having risen by 35·3 per cent from June 1, 1941, since when the index of payrolls has advanced by 70·6 per cent. The weekly earnings of the typical individual engaged in factory work have increased by 28·1 per cent, while the all-industries' average has gained by 25·7 per cent. The factors given above as influencing the all-industries' trends operate with greater force in the case of manufacturing.

Even more pronounced than the expansion in the number of workers and the payrolls in manufacturing as a whole in recent months, is that which has taken place in plants producing durable goods, in which the index of employment has risen by 56·4 per cent, and that of payrolls by 100·1 per cent from June 1, 1941, to February 1, 1944. Despite considerable curtailment in the non-durable goods division, the index number of employment in this group was 16·3 per cent above that indicated at June 1, 1941, while the increases in the payrolls amounted to 40 per cent.

In regard to the marked variations shown in the average earnings of workers in the different industrial classes, it must be borne in mind that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or over-time may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used. The degree of skill generally required of workers in the industry is obviously also an extremely important factor.

[1]The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

Report on Employment Conditions for March, 1944

The following summary of employment conditions for the month of March has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service offices across Canada.

DESPITE continuing lay-offs in war industry, the return of agricultural workers to the farms from their off-seasonal work in logging, food-processing, mining and other industries, was causing an up-turn in total labour demand.

In some centres the number of temporarily unemployed was substantial, but the majority of these were unfitted for current labour vacancies, whether through lack of the requisite skill or, as in the case of unskilled jobs in food processing, through lack of the necessary physique.

Maritime Region

Agriculture—While there was little agricultural activity, the farmers of the maritime provinces had begun to make inquiries as to the prospects of securing helpers, and to place their orders with the Employment and Selective Service offices. A shortage of farm labour was anticipated when the season gets under way, and efforts were continuing to insure the return of all agrarian workers on seasonal permits.

Logging—As the labour needs of agriculture increased, those of logging were on the decline. The long lumber cut was practically completed in most districts, and according to the Lumber Association it will exceed last year's total output. Preparations for the Spring drive were nearing conclusion, and inquiries were coming in as to the number of men who might be available for pulpwood cutting during the Summer. Logging in the Inverness neighbourhood was in full swing, and Halifax reported a continuing demand for fuelwood cutters and other loggers, who were not obtainable. Operations in the vicinity of Truro had been materially aided towards completion by an extension of the permits of agricultural workers from Prince Edward Island until April 13.

Farther north, in New Brunswisk, some operations in the Bathurst area had been terminated, and the Minto lumber operations were going forward satisfactorily. Men who had been employed on long lumber cutting were engaged in getting out raw pulp to fill recently made contracts, and will continue on this work until they are required for sawmill or agricultural duties.

Mining—There were no new developments in the mining field during the period. While an unchanging shortage of certified miners was recorded, full time operations were being carried on in all the coal mines of the region, and Minto reported an increase in shaft mining production over that of a year ago, attributed to the assistance of soldier miners.

Manufacturing—Several lay-offs of some proportions marked the period in the manufacturing field. Outstanding among these was the complete shutdown of the Clark Ruse Aircraft plants at Dartmouth and Moncton. During the month some 500 workers (25 per cent females) were laid off at the former factory, and about 300 (30 per cent females) at the latter. Branch offices of National Selective Service opened in the plants for the purpose, referred all possible skilled labour to other needy industries. Many of the girls were placed in Ontario industries, and male workers released were helping to alleviate the lack of skilled tradesmen and unskilled labour in the Halifax shipbuilding yards.

Throughout the region, the labour needs of shipbuilding were the most immediate. At Mahone Bay and Liverpool there was an urgent call for additional skilled workers and carpenters, and Hebbville's yards shared in this demand.

Construction—There was no great demand for construction workers in the maritime region, but the local employment offices were advertising any supply of available tradesmen.

Quebec Region

Agriculture—In the province of Quebec, the few agricultural vacancies occurring were hard to fill. The only activity was sugar making, and the farmers whose permits had expired were expected to fill the greater part of the demand for help in this respect. Some 300 permts were issued at Lévis for the temporary exodus of sugar-makers to the state of Maine, but these workers were to return in good time for their own agricultural duties.

Logging—Many of the smaller logging operations of the region were closed down, and the farmers employed in the bush were preparing to return home. However, in some districts the continuing fine weather has resulted in further recruiting of bushmen—Port Alfred required the services of 200 additional men, Val d'Or another 150, Rimouski 125 and Rouyn 200. It was estimated that as at the end of March, there were some 7,000 men in the bush, as compared with 49,000 at the peak of the season

in January. The managers of local employment offices were generally favourable to farmers continuing outside work until the end of April, so long as they could be recalled on short notice, if needed. This extension was designed to benefit the lumber operators.

The re-opening of the Maine border from March 15 to March 29 afforded an opportunity to United States operators to recruit in the neighbourhood of 1,000 bushmen. More than 800 were allowed labour exit permits,—for the most part farmers' sons and others who had been in the Canadian bush and were temporarily idle until the Spring sowing begins.

Mining—Little change in the mining labour situation was to be noted during the period, except in northern Quebec. In the Rouyn area the gold mines were working hard to increase production, and experienced miners were in demand. It was expected that still further numbers would be required when the agricultural workers left at the end of March. There was a boom developing in gold, copper, zinc, etc., with exploratory work going forward throughout the territory. Every available diamond drill outfit was in the field and if skilled diamond drillers were procurable, another 100 crews (roughly 1,000 men) were required.

Manufacturing—Continuing lay-offs in the manufacturing industry of the region were more than offset, generally speaking, by labour shortages in other essential production. In the Montreal area, staff reductions were effected without serious dislocation. The majority of the men released had been placed elsewhere, although the re-employment of women was not as successful, owing to their unwillingness to accept alternate jobs at lower wages. While the openings on hand in the Montreal district employment offices continue to decline, army call-ups had prevented the surplus of manpower from becoming a problem. Male help was easier to obtain than female, as large lay-offs of women were infrequent.

Lay-offs of a minor nature occurring at Drummondville had been counterbalanced by the heavy demand of the textile plants there, and other textile and clothing industries throughout the province were similarly in need of extra workers. At Jonquière and Shawinigan Falls men were required in considerable numbers for the aluminum industry. The shipbuilding yards of Lévis were asking for 165 skilled workers and the Quebec arsenal for women helpers. In the St. Jerome area, continued difficulty was being met in the increasing needs of the rubber factories, and efforts were being made to transfer to this work women who had been recently laid off at St. Janvier.

Construction—While some hundreds of construction workers were temporarily unemployed in the region, it was anticipated that projects commencing shortly should eliminate this condition. It was expected that work on the highway from St. Jerome to Mont Laurier would absorb all available local labour throughout the Summer months. At Rimouski the hiring of another 50 men on the Metis dam was taking care of the current labour surplus. Inactivity in the Jonquière neighbourhood would probably be relieved shortly by the construction of a small settlement at Shipshaw, with some 700 or 800 men employed.

Ontario Region

Agriculture—The exodus from industry to agriculture was light so far in all parts of Ontario. Should the present unfavourable weather continue, seasonal permits would probably be extended until work on the land could begin. There was, however, a greatly increased number of orders reported by all employment offices for agricultural assistance to be supplied when the Spring season actually opened. In the eastern part of the region, maple sugar-making was causing some demand on labour and in western Ontario, Chatham was facing the problem of securing beet workers for the sugar beet crop.

Logging—Weather conditions continued ideal for logging operations throughout the region, and the pulpwood sleigh haul was progressing satisfactorily. In the vicinity of Kapuskasing, cutters and loggers were still needed, although the demand was not nearly as pressing as earlier.

In the Ottawa valley, operations at Arnprior and Pembroke were practically completed, but Renfrew reported a shortage of labour for Summer bushwork. Farther west, Parry Sound's operators were closing down and Sudbury will be inactive until the Spring drive commences.

Sawmills—As the logging season ended, a number of bushmen were engaging in mill repairs, etc., preparatory to the opening of the sawmills. At North Bay one mill with a hot pond had started operations with 80 men, but all the other large mills, partly staffed with key men, were occupied with the overhauling of machinery and equipment prior to opening around May 1; approximately 1,200 men will be required for the industry.

Mining—The same shortage of men continued in the base metal mines. As agri-

cultural workers were leaving, the problem was becoming more serious, and there was a demand from all districts for miners, with the majority of operators calling for experienced men.

Manufacturing—The manpower problems of the manufacturing industry in Ontario were complicated by the need to replace agricultural workers in such factory centres as Chatham and Goderich, Paris and Woodstock. Prescott and Peterborough were also affected by this exodus to the farm. Heavy labour for the milling and packing plants was much in demand in the latter centre, and a considerable number of female workers were also required for the textile factories. London, faced with the loss of 500 agricultural workers, was concerned as to its war production schedules, and was calling for aid from outside areas.

Heavy labourers constituted the most urgent requirement in practically every part of the region. Women workers for the textile plants of the province were also difficult to obtain, and while the situation in Toronto in respect to women workers for the war plants was improving there continued to be a heavy demand for their services in almost every field of industry.

In Stratford the chief need was for key men in the aircraft industry, to replace those on deferment until May 31, but such workers were practically impossible to procure. At Brantford, where the demand for skilled and semi-skilled machinists and machine operators was increasingly heavy, one local foundry was experimenting with female machine moulders, with fair success.

Lay-offs in the region had been a minor matter as compared with the over-all scarcity of labour. The men leaving the D.I.L. plant at Parry Sound between March 10 and 31 were being readily placed with Toronto and Kitchener firms, and both the men and women released by the Imperial Leaf Tobacco factory at Delhi were all being absorbed locally.

Construction—Orders for all classes of construction tradesmen remained limited for the time being. One or two projects of some proportions were in prospect, but no actual work of any magnitude had begun.

Transportation—With the opening of the Spring season, transportation was increasing its demands for labour. Track workers and railway train crews were far short of the demand, and the North Bay office alone reported that some 800 men will be required by the three local railways between April 5 and May 15, for Summer work. Crews for the Ontario Car Ferry, in dry-dock since Christmas, will likely be sent from Montreal by the C.N.R., but firemen and deckhands were far short of the requirements of the Great Lakes boats.

Prairie Region

Agriculture—During the month there was a marked increase in the number of applications for agricultural workers recorded by the local employment offices of the prairies. Work on the land was not expected to commence until the middle of April, but even the return of farmers from their Winter employment in essential industries was not likely to satisfy the over-all demand for agricultural help for the coming season.

Logging—Although the prevailing mild weather had resulted in the closing down of many logging camps, operations in others were being accelerated in order to finish before the Spring thaw. In the Lakehead area, Fort William reported that a large number of bushworkers will shortly be leaving the camps, but the operators do not intend to release any wishing to remain, as they will need every available man for early Summer work. As yet, only very slight reductions were to be noted in their demands for bushmen. In the vicinity of Kenora many loggers were going out of the bush on account of the heavy snow, but the operators there hope to keep at least some of the camps open during the Spring and Summer.

In northern Manitoba, most camps around The Pas were still operating, but were ready to close down if the weather broke, and in the Flin Flon area there was the usual rush to clean up bush work in progress before the Spring thaw, with a consequently urgent call for more bushworkers.

Although logging operations in Alberta had been retarded by the unseasonably mild weather (most of the Edson camps were closing down, as roads were too soft for hauling) about 150 bush and sawmill workers were still called for in the Edmonton neighbourhood.

Mining—In the coal mining area, employment for lignite operations was practically at a standstill, as all fuel orders were filled and storage in any quantity was not feasible. However, sub-bituminous mines were still operating from two to four days a week.

Colder weather had enabled the Estevan mines to give somewhat steadier work to their crews: surplus workers were absorbed by packing plants and the railways. At Lethbridge the mines continued on a short-time basis, and some miners were released to agriculture. Medicine Hat maintained a

small protective staff on all coal properties, and production was restricted to local requirements. The situation in the Drumheller area was the most acute throughout the region's coal fields with a considerable number of miners unemployed. At Edson the situation remained unchanged, but it was probable that the steam coal mines would soon start working full time.

An increase in prospecting and development work in the base metal mines was causing a shortage of workers, aggravated by the exodus to agriculture. All mines in northern Ontario shared in this lack of labour, and unless men leaving the bush could be procured, very few others were obtainable.

Manufacturing—The over-all labour shortage in manufacturing persisted throughout the region. The packing plants and flour mills were in the greatest need, as the husky labourers in demand were not to be found, and many of those already employed will be leaving as their temporary farm permits expire. At Edmonton, all such permits were extended to April 15.

Estimated requirements for the Fort William aircraft plant still approximated 600 male and female workers. The housing of those from outside points presented a problem accentuated by the release of some 250 stevedores (local residents) from their Winter work to return to stevedoring. In other centres, aircraft plants were releasing, rather than hiring, employees. A lay-off of some 100 workers was in progress at one plant in Moose Jaw—20 to 25 were men under deferment, and the remainder married women. In Winnipeg all aircraft plants were dispensing with services on account of the work shortage. The local munitions plant required some 75 men before the middle of April, and had requested that labour from the aircraft plants be referred to them.

Construction—Little or no activity was recorded in the region's construction. Such projects as were under way, or contemplated with the return of the warm weather, could be easily manned insofar as skilled tradesmen and construction workers were concerned, and the only shortage may be that of unskilled labour in some areas.

Grain Elevators—Almost as pressing as the need of the region's packing plants was that of the grain elevators at the head of the Lakes. Men coming out of the bush were not suited to the confined, dusty work involved, and the release of farmers brought from the prairies for the Winter months was increasing the demand for workers.

Pacific Region

Agriculture—The imminent release of farm workers from other essential industries was naturally welcomed by agriculture in the Pacific region as solving its increasing need for workers. In the northern interior, farm labour requirements were not pressing, and no great demand for help was expected for some weeks to come, but farther south activity was evidenced. Chilliwack's orders for good dairymen were increasing, and its applicants were decreasing, but Kelowna as yet had been able to meet the enlarging demands where accommodation and wages were up to standard.

Vancouver reported that vacancies far exceeded applicants, and there was a general shortage of much-needed dairy workers, but according to Island Farms Limited on Vancouver Island the situation was much easier than for two years past.

Logging—Logging operations in the southern interior of British Columbia were temporarily handicapped by road conditions. Nelson and Trail reported that employment was fairly stable, and no marked change was likely before April 15 at earliest, but at Cranbrook the closing of the roads had resulted in a falling off in the demand for truck drivers and swampers. Farther north, the lack of experienced riggers and chokermen had slowed up the operations at Prince George and Prince Rupert, and a similar situation was reported by Vancouver and the local offices at Courtenay and Duncan.

Sawmills—The sawmills of the region were becoming more active for their most important production period. For the time being, they were in a better situation than earlier in March when a shortage of logs forced a number of mills with large staffs to close down temporarily. The northern interior of the Province was well supplied with sawmill labour, and farther south road conditions which had handicapped logging operations had also resulted in the temporary closing down of a number of mills.

On Vancouver Island, Victoria reported that the release of unskilled shipyard workers had eased the manpower stringency. All mills were operating full time, though with more labourers and mill hands needed. Duncan urgently required workers—white, East Indian and Chinese alike.

The dearth of logs was still affecting the sawmill industry at New Westminster, but not so seriously as was anticipated earlier, and manpower shortage was presently more pressing than the log shortage.

Mining—The labour outlook in the coal mining field was quite satisfactory for the

time being. With dealers' stock-piles at the peak, and warmer weather prevailing, the market for domestic fuels was fully supplied. In the Merritt district the mines were closing down at the end of the month, and the 80 men to be laid off would be transferred to other districts as far as possible. The occasional man was being laid off at the Nanaimo pits of Canadian Collieries. There seemed to be a possibility of additional reductions in the near future.

In the Fernie area, the Crow's Nest Pass mines were transferring miners from Michel to the Elk River Colliery, thereby facilitating the promotion of younger men who had passed their digger's examination, from underground workers to miners, and leaving openings for underground labour at Michel. The Elk River workings were experiencing difficulty in persuading miners to go on duty on Saturdays, and as a result three times the number of surface men as miners reported for duty.

The base metal mines of the region were making continuingly heavy demands on the supply of underground workers, but the call was limited to single men or those willing to be separated from their families. The entire base metal mining industry was feeling the effects of the departure of many agricultural workers, and vacancies were higher than for some months past. In this respect Trail was in the most serious position, as operations there were in process of releasing some 350 agricultural workers, and clearance orders had consequently been stepped up to secure sufficient labour to maintain production in this vital war industry. An adequate number of applicants was available to fill any vacancies suitable to women workers.

Manufacturing—Conditions in general were satisfactory in the manufacturing field, but there was a persisting demand for skilled machinists, moulders and auto mechanics. New Westminster and Vancouver were foremost in their calls for workers of these types, and both offices also reported that the lack of heavy labour in all industries was handicapping production and threatening the termination of some shifts too shorthanded to carry on. The forthcoming exit of farm workers would naturally increase this dearth of labourers.

The shipyards generally were gradually laying off workers, the majority of the deferred being placed elsewhere, subject to military training. In Victoria, lay-offs from all shipyards, up to the end of March, were approximately 300 men.

Pulp and paper operations in British Columbia, owing to climatic conditions and their geographical situations, were experiencing a consistent shortage of heavy labour and grinder room employees. This deficiency, too, was accentuated by the withdrawal of farm workers on temporary permits.

Construction—Little or no change had occurred in the construction field during the period. The only active projects of any magnitude—the National Defence work at Boundary Bay and Comox, and the power dam at Brilliant, were going forward according to schedule. Apart from this construction, some private building enterprise was the only activity for the time being.

New Textbook on Industrial Safety

INDUSTRIAL Safety is the title of a textbook prepared under the editorship of R. P. Blake for safety engineering classes and industrial safety officers. It is written by eight experts in the field, including safety engineers employed by the United States Department of Labour and Public Health Service and by leading private firms.

The editor asserts in the preface that "the present accident waste is almost wholly needless" and can be eliminated by "the application of informed safety-minded commonsense to the day-by-day work" of American industry. In the first chapter it is pointed out that a number of large firms and, in a few cases, whole industries have achieved outstanding reductions in accident rates by safety work. However, there are still a multitude of small establishments which need to be convinced of the value of accident-prevention campaigns and instructed in the fundamentals of industrial safety.

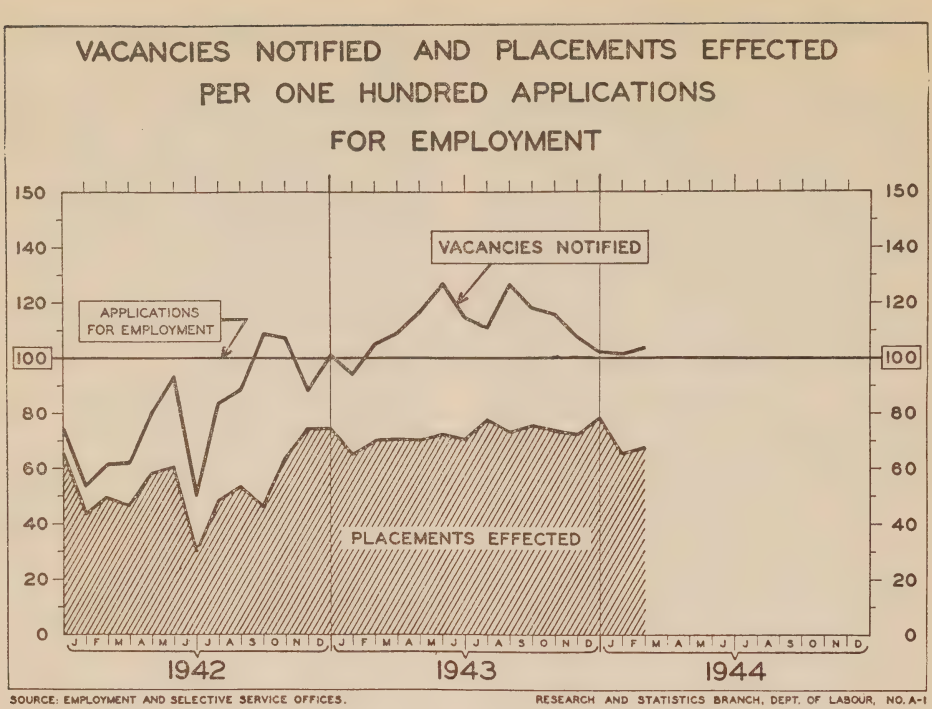
A brief history of safety work in American industry is given in the book. The cost, causes, investigation and prevention of accidents are discussed in detail and methods of appraising safety performance suggested. There are chapters on plant housekeeping, maintenance, ways of handling materials, prevention of falls, personal protective equipment, fire prevention and first aid. Considerable attention is given to the problems of guarding different types of machines. Methods of teaching safety to new employees are outlined and the special problems connected with the employment of women discussed. The control of industrial health hazards is dealt with in a final chapter.

The book contains specimens of accident-record forms, safety inventories, etc., diagrams of guards for machines and a number of safety cartoons. Bibliographies on safety and industrial health are also included.

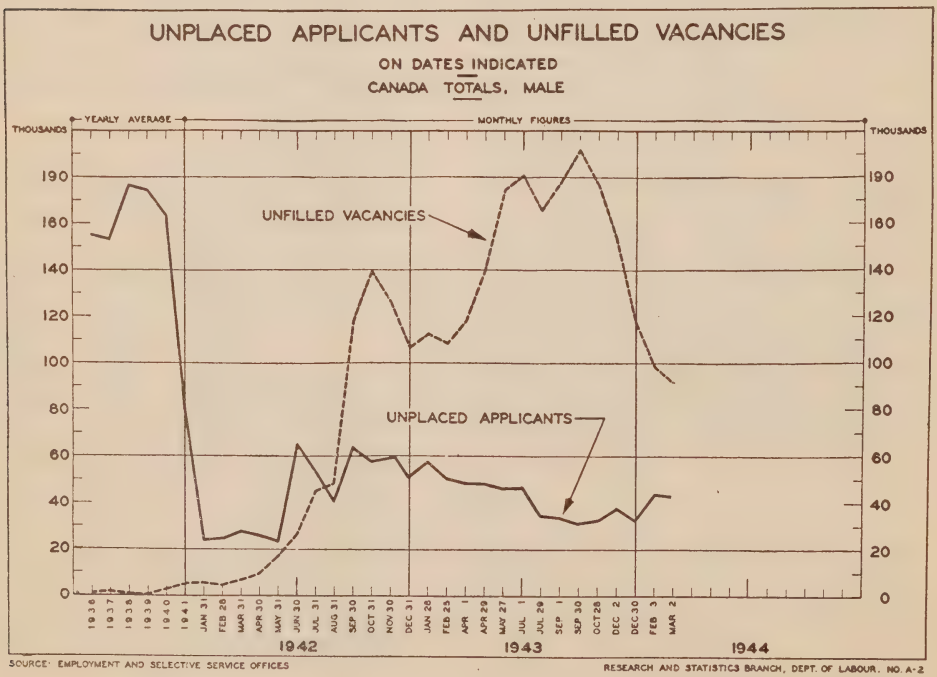
R. P. Blake, ed., *Industrial Safety*, Prentice-Hall Inc., New York, 1943, 435p.

Applications for Employment; Vacancies and Placements February, 1944

THE volume of business transacted by the Employment and Selective Service Offices of the Unemployment Insurance Commission for the four-week period February 4 to March 2, 1944, as indicated by the average daily placements effected, showed slight declines both when compared with the previous five weeks and with the four weeks January 29 to February 25, last year. Under the first comparison, agriculture, and fishing, hunting and trapping remained unchanged but all other industrial divisions registered declines, the most pronounced being in services, manufacturing, and forestry and logging. When compared with the four weeks January 29 to February 25, 1943, except for an appreciable gain in forestry and logging and a moderate increase in trade, all industrial groups recorded losses, the most noteworthy being in manufacturing, construction and services.



The accompanying charts show the trend of employment since January, 1942, as represented by the ratios of vacancies notified and of placements effected for each one hundred applications for work registered at Employment and Selective Service Offices throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications took upward courses, the ratio of vacancies to each one hundred applications being 103·7 during the four weeks ending March 2, in contrast to 101·5 during the previous five-week period December 31, 1943, to February 3, 1944, and 105 during the four weeks January 29 to February 25, 1943. The ratio of placements to each one hundred applications during the period under review was 67·6 compared with 65·3 during the preceding five weeks and 69·9 during the four weeks ending February 25, a year ago.



The average number of vacancies reported daily by employers to the offices throughout Canada during the four weeks ending March 2, was 7,645, as compared with 8,597 during the previous period of five weeks' duration and with 8,567 during the four weeks January 29 to February 25, 1943. The average number of applications for employment received daily by the offices during the period under review was 7,369, in comparison with 8,465 during the preceding period and 8,160 in the four weeks ending February 25, last year. The average number of placements made daily by the offices during the period February 4 to March 2, 1944, was 4,982, of which 4,826 were in regular employment and 156 in work of one week's duration or less, as compared with a total daily average of 5,527 during the previous five weeks. Placements during the four weeks ending February 25, 1943, averaged 5,702 daily, consisting of 5,515 in regular and 187 in casual employment.

During the four weeks ending March 2, the Employment and Selective Service Offices referred 168,850 persons to vacancies and effected a total of 119,563 placements. Of these the placements in regular employment were 115,820, of which 73,443 were of males and 42,377 of females, while placements in casual work totalled 3,743. The number of vacancies reported by employers was 115,020 for males and 68,464 for females, a total of 183,484, while applications for work numbered 176,857 of which 112,330 were from males and 64,527 from females. Reports for the five weeks December 31, 1943, to February 3, 1944, showed 249,311 positions available, 245,487 applications made and 160,281 placements effected, while during the four weeks January 29 to February 25, 1943, there were recorded 205,605 vacancies, 195,830 applications for work and 136,842 placements in regular and casual employment.

The following table gives the placements effected by the offices, each year, from January, 1934, to date:—

Year	Placements		
	Regular	Casual	Totals
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942	809,983	85,638	895,621
1943	1,890,408	53,618	1,944,026
1944 (9 weeks)	270,573	9,271	279,844

Nova Scotia and Prince Edward Island

During the four weeks ending March 2, 1944, the daily average of positions offered through Employment and Selective Service Offices in Nova Scotia and Prince Edward Island was 280, compared with 311 in the preceding five weeks and 351 during the period ending February 25, 1943. The average number of placements registered daily was 188 during the four weeks under review, in comparison with 227 in the previous period and 247 during the four weeks ending February 25, last year. The reduction in placements from the period ending February 25, 1943, was greatest in construction, with more moderate decreases in services and logging. The only increases of importance were in public utilities operation and manufacturing while the changes in other groups were small. Industrial groups in which most of the placements were effected included: manufacturing, 1,930; services, 842; public utilities operation, 600; trade, 537; construction, 307 and mining, 152. There were 2,951 men and 1,392 women placed in regular employment.

New Brunswick

Orders received at Employment Offices in New Brunswick during the period under review, called for an average of 204 workers daily, compared with 209 during the five weeks ending February 3, and with 210 in the four weeks ending February 25, last year. There was a daily average of 140 placements compared with 165 in the preceding five weeks and 172 during the period ending February 25, 1943. A fairly large decrease in construction and a moderate loss in services accounted for the reduction reported in placements when compared with the four weeks ending February 25, last year. Improvement, however, was noted in logging, manufacturing and public utilities operation, although none of these gains was important. Placements by industries included: manufacturing, 961; logging, 663; services, 554; public utilities operation, 410; trade, 386; construction, 218 and mining, 115. Placements in regular employment numbered 2,404 of men and 908 of women.

Quebec

There was a decrease in the average number of positions available daily at Employment Offices in the Province of Quebec during the period ending March 2, 1944, there being 2,473, compared with 2,545 in the preceding five weeks and 2,686 during the period ending February 25, 1943. Placements showed a higher average during the four weeks under review, 1,553 daily in contrast with 1,498 in the previous period and with 1,473 during the four weeks ending February 25, last year. The gain in placements over the period ending February 25, 1943, was mainly due to a substantial increase in logging, while improvement of small proportions was reported in trade and public utilities operation. Fairly large losses, however, were recorded in manufacturing and construction, with a moderate decline in services. Industrial divisions in which the majority of placements were effected included: manufacturing, 17,734; logging, 6,824; services, 4,721; trade, 2,686; public utilities operation, 2,182 and construction, 2,105. Regular placements numbered 24,909 of men and 12,163 of women.

Ontario

Opportunities for employment, at Employment Offices in Ontario during the four weeks under review, numbered 3,061 daily, compared with 3,727 in the previous five weeks and 3,320 during the period ending February 25, last year. Placements, likewise, showed decreases under both comparisons, the daily average being 1,925 during the period under review, as compared with 2,262 in the preceding five weeks and with 2,359 during the four weeks ending February 25, 1943. The most marked reduction in placements from the period ending February 25, last year, occurred in manufacturing, although fairly large decreases were registered in construction and services. Of the changes in all other industrial groups, the gains were offset by the losses. Placements by industrial divisions numbered: manufacturing, 22,999; services, 8,410; trade, 5,339; public utilities operation, 3,275; logging, 2,393; construction, 1,821 and mining, 935. There were 26,598 men and 18,394 women placed in regular employment.

Manitoba

Positions offered through Employment Offices during the period ending March 2, 1944, averaged 311 daily compared with 322 in the preceding five weeks, and with 380 during the period ending February 25, 1943. There was a daily average of 225 placements compared with 244 during the five weeks ending February 3, and 326 in the period ending February 25, last year. All industrial groups, except fishing and hunting, recorded declines in placements from the four weeks ending February 25, 1943. The largest reductions were reported in construction, public utilities operation, manufacturing, services and logging, while smaller losses occurred in mining and trade. Placements by industrial divisions included: manufacturing, 1,890; services, 1,482; trade, 950; public utilities operation, 456; construction, 165 and logging, 149. Placements in regular employment numbered 2,289 of men and 2,222 of women.

Saskatchewan

Orders listed at Employment Offices in Saskatchewan during the four weeks under review, called for a daily average of 180 workers, compared with 182 in the previous period and 172 during the four weeks ending February 25, 1943. The average number of placements effected daily was 122 during the period under review, in comparison with 136 in the preceding five weeks and 143 during the period ending February 25, last year. With the exception of a moderate gain in logging and a nominal increase in manufacturing, all industrial groups showed declines, the highest of which was in services. Industrial divisions in which most of the placements were effected included: services, 970; manufacturing, 619; trade, 564; public utilities operation, 314; and logging, 282. Regular placements numbered 1,485 of men and 1,196 of women.

Alberta

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Alberta during the period ending March 2, 1944, was 331, as compared with 340 in the previous five weeks and 408 during the period ending February 25, 1943. Placements showed a daily average of 226, in comparison with 271 in the preceding period and with 305 during the four weeks ending February 25, last year. Placements in construction were considerably fewer than in the period ending February 25, 1943, while more moderate losses were reported in public utilities operation, services and manufacturing. Industrial divisions in which employment was found for more than 100 workers included: services, 1,670; manufacturing, 997; trade, 873; construction, 626; public utilities operation, 495; logging, 300; mining, 241; and agriculture, 154. There were 3,065 men and 1,882 women placed in regular employment.

British Columbia

Employment opportunities, as indicated by orders received at Offices in British Columbia during the four weeks ending March 2, 1944, showed a daily average of 806, compared with 960 in the preceding period and 1,039 during the four weeks ending February 25, 1943. During the period under review, the average number of placements recorded daily was 602, in contrast with 723 in the previous four weeks and 676 during the period ending February 25, last year. The decrease in placements when compared with February 25, 1943, was due to a fairly large decline in construction, while smaller losses in manufacturing and services offset in part the gains in logging and trade. Industries in which most of the placements were effected included: manufacturing, 4,504; services, 3,078; logging, 2,211; trade, 1,532; construction, 1,324; public utilities operation, 1,136; and mining, 397. During the period under review, there were 9,742 men and 4,220 women placed in regular employment.

Labour Law

Recent Regulations Under Dominion and Provincial Legislation

PERSONS from abroad engaged in war work in Canada are again given special consideration with respect to the payment of their 1944 income taxes. Regulations pertaining to the superannuation of civil servants in the Forces have been altered. Other Dominion Orders in Council passed recently are listed below.

Provincial regulations include provision for safer driving of public service vehicles in Alberta and for the operation of Alberta theatres without apprentices. Another form of dermatitis has been made compensatable in British Columbia. The minimum age for employment at the working face of a Nova Scotia coal mine, has been reduced from 18 to 17½ as a wartime emergency regulation. General Order 4 under the Quebec Minimum Wage Act has been renewed. In Saskatchewan, there are new regulations for preventing accidents in grain elevators, the minimum ages for employment in mines have been raised, the Industrial Standards and the Trade Schools Regulations have been revised, and orders exempting industries from the One Day's Rest in Seven Act have been consolidated.

Dominion

Income Tax Adjustments

Payment of income tax at rates prevailing in their respective countries, as authorized in 1942 and 1943 for persons from abroad engaged in essential war work in Canada (L.G., 1943, p. 390) are again permitted for the income tax year 1944 by an Order in Council (P.C. 53/9180) gazetted March 20. These rates may be paid if reasonable proof is furnished to the Department of National Revenue that the services of such persons may be lost due to Canadian tax rates being substantially higher. The difference between the amount payable under Canadian rates and the amount actually paid must be made up by the employer.

Public Service of Canada

By Order in Council (P.C. 32/1781) gazetted March 27 and effective January 1, 1944, any person appointed to a permanent position in the Civil Service, which is exempt from the Civil Service Act, who has enlisted for overseas service will not have to furnish further evidence regarding his health as normally required by the Civil Service Superannuation Act.

Another Order in Council (P.C. 26/1385) effective from September 7, 1939, amends a previous Order (L.G., 1943, p. 1172) regarding superannuation regulations. The amendment omits the provision that civil servants' period of leave for service in the Forces does not count as service in computing the thirty-five years for which contributions must be paid under the Superannuation Act. As formerly, contributions need not be paid during this period.

Other Orders

By an Order in Council gazetted April 3, the name of the War Emergency Training Program has been changed to Canadian Vocational Training.

The following recent Orders are summarized elsewhere in the LABOUR GAZETTE: P.C. 1727 amending the Wartime Wages Control Order; P.C. 79/1385 amending the Wartime Salaries Order; P.C. 1355, a revision of the National Selective Service Mobilization Regulations; P.C. 2222 *re* compliance of applicants for unemployment insurance benefit with Mobilization Regulations; P.C. 1780 dealing with the payment of prisoners of war and internees; P.C. 1977 amending the National Selective Service Civilian Regulations; P.C. 1982 bringing the Wartime Labour Relations Regulations into force; as well as other Orders relating to appointments to various labour boards.

Provincial

Alberta Public Service Vehicles Act

An Order in Council gazetted March 15 adds a new section to the general regulations under this Act (L.G., 1943, p. 1418) requiring the driver's seat to be protected by a rail or other contrivance, and to be so placed that the passengers will not crowd the driver.

Alberta Theatres Act

The regulations governing motion picture projectionists (L.G., 1942, p. 691) were amended by an Order in Council gazetted March 15. Theatres using more than one machine need no longer employ an apprentice as well as a licensed projectionist, regardless of the size of the theatre or the municipality. However, where the population exceeds 3,000 and the seating capacity is more than 500, two licensed projectionists must still be employed.

British Columbia Workmen's Compensation Act

A regulation gazetted March 23 adds dermatitis from any process involving contact with glue in wood-working plants to the industrial diseases for which compensation may be paid under this Act.

Nova Scotia Coal Mines Regulation (Wartime Emergency) Act

A regulation under this Act (L.G., 1943, p. 267), gazetted March 29, permits the employment of a person 17½ years old at the working face of a coal mine at cutting, shearing, mining, boring or loosening coal by hand, machinery or otherwise. He must be an apprentice serving under a mining apprenticeship training scheme approved by the Minister of Mines, and while employed he must be under the direction and close supervision of a person who has a first-class certificate of competency as a coal miner under the Coal Mines Regulation Act. Previously, 18 years was the minimum age for employment at the working face under the Coal Mines Regulation Act as amended.

Quebec Minimum Wage Act

Order 4 applying to all workers covered by the Minimum Wage Act and not governed by special orders (L.G., 1942, p. 586; 1943, p. 154) has been renewed to April 1, 1945 by an Order in Council gazetted March 11.

5553—7

Saskatchewan Factories Act

Regulations for the prevention of accidents in grain elevators were gazetted January 24 and are effective February 1, cancelling the previous regulations issued in 1929. The stipulation that no person under 16 may operate a manlift is repeated and certain changes are made regarding the construction and equipment of elevators in order to ensure greater safety. Two new rules are that no employee shall enter a grain bin unless rope is suspended in it, and that trap doors shall be kept closed when not in use.

Saskatchewan Industrial Standards Act

Regulations under this Act (L.G., 1938, p. 41), as it stands in the Revised Statutes of Saskatchewan, 1940, were gazetted on January 24. On March 7, they were re-published with slight corrections.

Saskatchewan Mines Regulation Act

A revision of the regulations under this Act, gazetted January 24, raises the minimum age at which a boy may be employed above ground from 14 to 16, and below ground from 16 to 18, in any mine except a coal mine. No person under the age of 18 may now operate an elevator, a power-driven crane, or a hoisting engine used in raising and lowering persons. Certain other changes are made regarding the technical operation of mines. The Coal Miners' Safety and Welfare Act fixes a minimum age of 16 for employment "in the workings" of a coal mine.

Saskatchewan One Day's Rest in Seven Act

Orders in Council exempting four industries from the Act have been consolidated into one order gazetted January 24, and effective from February 1, 1944. The Act applies only in cities. The exemptions are municipal fire departments, nursing, drug store employees serving a term of apprenticeship to become pharmacists, and railroad employees governed by union agreements.

Saskatchewan Trade Schools Regulation Act

A revision of the regulations under this Act (L.G., 1941, p. 33; 1940, p. 125) was gazetted on January 24. The only change is that a person under 16 must now submit to the Commissioner of Labour and Public Welfare proof that he has complied with the provisions of the School Attendance Act before he can be admitted to any course offered by a trade school. Previously, there was no express stipulation that such proof had to be furnished.

Recent Legal Decisions Affecting Labour

Alberta Court Quashes Convictions Under Wartime Wages Control Order

TWO convictions under the Wartime Wages Control Order (L. G., 1942, p. 778) were quashed by the Appellate Division of the Alberta Supreme Court on January 18. The convictions applied to a hotel company which had been found guilty of violating on two occasions a direction of the Alberta Regional War Labour Board.

The hotel company had hired a porter in March, 1943, at a wage rate of $17.50 a week. On May 21 the Regional Board issued an order fixing the rate for hotel porters at $25. The evidence showed that on or about August 18 and September 18, the company had paid the porter in question at the rate of $17.50. However, on November 6, before any charge was laid, the company had sent the porter a cheque to bring his wages for those dates up to the prescribed rate. The Magistrate did not consider that this altered the fact that the Company had violated the direction on August 18 and September 18.

The Appeal Court, on the other hand, held that

> . . . there can be no offence committed by a failure to do something on a particular day unless there is some lawful requirement that it should be done on that particular day.

There was nothing in the order requiring payment of the full rate on any particular day.

Nor was there any evidence to show that

> the first payment was such a payment as denied the right to the payment of any balance that might be found due.

The Court considered it only fair to point out as a reasonable explanation of the company's acts that for some months after the order was issued there were conferences and correspondence between the Hotel Keepers' Association and the Regional Board as to what class of work was covered by the word "porter." *Rex v. King Edward Hotel Company Limited* (1944), Western Weekly Reports, 382.

Damages Refused for Loss of Artificial Limb in Accident Covered by Quebec Workmen's Compensation Act

Setting aside a judgment of the Montreal Superior Court, the Appeal Side of the Court of King's Bench in Montreal on February 29 dismissed with costs the action of a worker to recover from his employer the cost of an artificial arm broken in the course of his employment. The Court held that the accident was one coming under the Quebec Workmen's Compensation Act and therefore the worker had no right of action against his employer.

While employed as a night watchman the worker had fallen from a ladder breaking his wooden arm and suffering injuries to his face and body. The Workmen's Compensation Commission compensated him for his injuries but not for the loss of the artificial limb. The worker then sued his employer for the cost of the arm and was awarded $100 by the Montreal Superior Court. In quashing this judgment, the Appeal Court pointed out that the accident in question was the fall from the ladder not the breaking of the artificial arm which was merely one of the consequences of the accident. Such an accident was clearly one covered by the Workmen's Compensation Act and therefore, under sec. 1056a of the Civil Code, the worker had no right of action except to the extent allowed by the Act. There was no exception in the Act allowing an action in the case under consideration. *Vincent & Company Inc. v. Sam Gallo*, Court of King's Bench (Appeal Side), February 29, 1944.

English Court Holds Worker not Reinstated When Given Wages but No Work if Work Available

On January 27 an appeal against the acquittal of a company charged with failing to comply with a direction of a National Service Officer was allowed by the Divisional Court in Great Britain. The National Service Officer had, under the Essential Work Order, ordered the company to reinstate a worker who had been dismissed for misconduct. The company had paid the worker wages but given him no work. The Appeal Court held that this did not constitute reinstatement and sent the case back to the Justices for a conviction to be entered against the company. The case was reported in the British *Ministry of Labour Gazette* for February.

The Essential Work Order prohibits employers in scheduled undertakings from dismissing workers except for serious misconduct without the permission of a National Service Officer. A worker dismissed for misconduct may ask the National Service Officer to refer the case to a local appeal board representing employers, workers and the general public. While National Service Officers are not obliged to follow the recommendations of appeal boards, they have power to order workers reinstated if they consider their dismissal unjustified (L.G., 1942, p. 933).

The worker in question was dismissed on December 11, 1942. The local appeal board found the dismissal unjustified and the National Service Officer ordered his reinstatement. When the employee presented himself at the factory on January 12, 1943, he found that the machine which he had previously operated had been taken over by another worker who had been upgraded for that purpose. No other work was given to him but he was paid the basic wage from January 12 until February 9 when he voluntarily left the company's employ. He was told on several occasions during this period that work might be available for him at a later date at another factory.

The lower Court considered that the worker had been reinstated when he received the same wage as before dismissal. The Divisional Court, however, held that the worker had not been reinstated in the full sense of the term as defined in a Scottish case:

> The natural and primary meaning of "to reinstate" as applied to a man who has been dismissed, *ex hypothesi* without justification, is to replace him in the position from which he was dismissed and to restore the *status quo ante* the dismissal.

Mr. Justice Humphreys pointed out the distinction between this case and *Hodge v. Ultra Electric Ltd.* (L.G., 1943, p. 866). In the latter case the company was held to have reinstated a worker as far as circumstances permitted when it provided her with wages and no work because no work was available. In the present case, however, there was no evidence to show that the company had made any effort to find work for the man. In fact it appeared that it had deliberately refused to give him work because it did not want him about the premises. His Lordship declared that if merely putting a man on the payroll constituted reinstatement, it could be argued that a man was reinstated if his employer offered him a pension for life equal to his wages on the condition that he did not come near the premises. *Jackson v. Fisher's Foils Limited,* Divisional Court, January 27, 1944.

Labour Standards in Vocational Training

In an article of this title the Chief of the Vocational Training Apprentice Section of the Wage and Hour and Public Contracts Divisions of the U. S. Department of Labour outlines the application of federal labour laws to persons undergoing vocational training.

Under the Public Contracts Act, which establishes employment standards for work done under government contracts of $10,000 or more for materials and supplies, a minimum wage ranging from 30c to 70c per hour must be paid with time and a half for all hours worked in the work-week beyond 8 a day or 40 in the week. The Fair Labor Standards Act secures for workers engaged in interstate commerce or in the production of goods for such commerce a minimum of 40c per hour and a 40-hour work-week with time and a half for overtime.

The procedure is that trainees are hired by the manufacturers and then referred to the schools for training. When the schools accepted this responsibility an agreement was reached between the U. S. Office of Education and the Wage and Hour and Public Contracts Division whereby labour standards which had to be met when training was given in the factory would be maintained in the schools. Thus trainees must be paid at least the applicable minimum rate under the Fair Labor Standards Act or the Public Contracts Act, whichever is higher, during the time they are actually engaged in production work within the scope of the Acts. The Administrator of the Divisions has interpreted this to mean that if the trainee performs any productive work for interstate commerce during a week, at least the applicable minimum hourly rate shall be paid for all hours of training or other work during the week, and time and a half for overtime hours of training or other work. Furthermore the rate must be in accordance with any collective agreement effective for the same class of work in the plant. The only exception to these requirements for payment of wages is in the case of training courses voluntarily attended, given outside regular working hours including no productive work and intended to train employees to a new skill.

There are also regulations applying to student-learners, that is persons attending vocational schools and doing part-time work in plants by way of related experience. In this case, too, the rates paid must conform to the policy laid down. In some instances, on the application of the school officials, rates lower than the applicable minimum may be permitted. Throughout the training period the certificate authorizing such employment ensures that the rates average at least 75 per cent of the ordinary minimum.

The authorities consider these conditions have proved beneficial. The schools are no longer open to the charge that through their vocational training programs they are aiding employers to exploit inexperienced workers to the detriment of wage standards. Wages give the trainees a feeling of responsibility to tide them over the more monotonous aspects of learning the job, as well as providing the means whereby they are enabled to continue their course. As the article stresses, the safeguards set up in accord with the Acts are intended to protect not only the employee but also the socially responsible employer from the unfair competition of other employers. Such abuses increase when jobs become scarce.

The restrictions which have been placed upon the training programs in the schools must therefore be considered as part of a larger policy by which the Federal Government is trying to secure a fair labour standard for the whole working population.

Prices

Prices, Retail and Wholesale, in Canada, March, 1944

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THERE was a gain of 0·1 to 119·0 (1935-39=100) in the Dominion Bureau of Statistics cost-of-living index between February 1 and March 1, 1944 (*see* Table I). Higher food prices were responsible and the food index moved up 0·2 points to 131·1, due mainly to gains for fresh vegetables. These outweighed declines for eggs, oranges, lemons and cheese. Lower prices for aspirin were responsible for a drop of 0·1 to 109·0 in the miscellaneous sub-group in March, while other sections were unchanged. Rentals remained at 111·9; fuel and light at 113·0; clothing at 121·3 and homefurnishing and services at 118·4.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted although chain store prices are used in the calculations of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a $4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

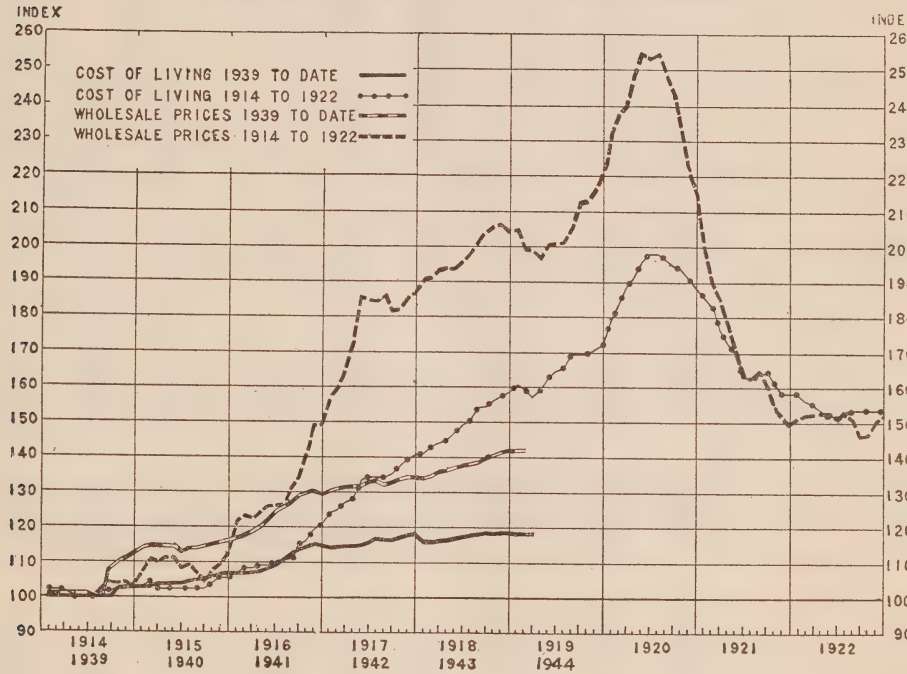
The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between $600 and $2,800 in 1938. The average expenditure was $1,413.90, divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home-furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last-named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insur-



ance (5·2 per cent), $73.30. Other expenditure not directly represented in the index brought the total family living expenditure to $1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home-furnishings, etc., with their weights, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE under the title, *Price Control in Canada.*

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1944

BASE: PRICES IN JULY, 1914 AND IN AUGUST, 1939=100

Wholesale Prices, March, 1944

A further fractional increase in March carried the general wholesale index up 0·3 points to 103·0 (1926=100). (*See* Table V). The vegetable and iron and steel products groups were responsible for this advance. Increases for oranges, rye, onions, potatoes, and unmanufactured tobacco outweighed declines for bananas, lemons, and hay to produce a rise of 0·5 points in the vegetable products index which reached 95·7 in March. An increase in rolling mill products advanced the iron and steel group 1·1 points to 117·1. The animal products index declined fractionally from 107·8 to 107·7 with increases for hogs, lambs, and carcass beef overbalanced by decreases for fishery products, furs, steers, calves and lard. Although advances occurred for furniture, coke and certain inorganic chemicals they were insufficient to change indexes for groups concerned. All other component group indexes remained unchanged for March as follows: textiles 91·9, wood products 117·8, non-ferrous metals 79·7, non-metallic minerals 102·9, and chemicals 100·2.

The Canadian Farm Products index remained unchanged in March, a rise of 0·2 to 92·7 for field products being balanced by a drop of 0·4 to 123·7 for animal products.

(b) The basis of these figures is the record of rents collected in the 1941 Census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(c) Rents marked (c) are for apartments or flats. Other rent figures are for single houses. Apartment and flat rents have been shown where this type of dwelling is more common than single houses.

Price Movements in Canada and Other Countries

Wholesale price indexes available for the first quarter of 1944 continued generally to show moderate gains. The Canadian index, after remaining stationary in January, advanced 0·5 points in February and March. In the United States continued advances in coal and coke prices, as well as higher farm products prices, contributed to an increase of 0·4 points between December and February. In the same period the United Kingdom wholesale index rose 1·2 points, influenced in January by higher prices for oranges, tin, and cotton yarns and cloth, and in February by a substantial increase in coal prices. The Australian index rose slightly in January but declined 0·6 points in February. The New Zealand index remained unchanged in January, while in South Africa wholesale prices continued to rise, gaining 1·0 in January, 1944.

Cost-of-living indexes in Canada and the United States moved lower in January and February of 1944, when declines in food prices outweighed small advances in other groups. Both series showed February increases in fuel, clothing, and health maintenance. In the United Kingdom higher fuel prices raised the cost-of-living index 1·0 in February; all other groups showed no net change between October, 1943, to March, 1944. The Australian index closed 1943 at the level recorded in the first quarter, an indication of the success of a price stabilization policy designed to maintain the April, 1943, level of living costs.

Labour and Industry in New Brunswick, Ontario and Saskatchewan

Annual Reports of Provincial Departments of Labour

THE following article reviews the activities of the Departments of Labour in New Brunswick, Ontario and Saskatchewan, as detailed in their Annual Reports for the preceding fiscal year.

New Brunswick

The seventh annual report of the Director of Labour and Fair Wage Officer of the Department of Health and Labour for the fiscal year ending October 31, 1943, deals with the administrative activities of the Fair Wage Board, Industrial Standards Act, etc.

The Fair Wage Board cites its lack of authority to fix wage rates under the Federal Wages Control Order. Representations had been made to the responsible Dominion authorities for the return of jurisdiction in the matter of fixing minimum wages. However, it seemed evident that regulation of wages by the Board would be curtailed when prevailing economic conditions made it necessary for the Federal government to adopt a wages control policy in connection with the prevention of inflation. It is pointed out in the Report that the Regional War Labour Board had brought about improvement in specific cases and so in some measure carried out the desires of the Fair Wage Board.

Factory Inspection.—Factory inspectors inspected 59 plants, employing 2,023 male and 1,138 female employees. Recommendations included: Improved safety measures; rest and lunch room facilities; reduced hours of work; improved sanitation; improved lighting and better fire protection. These recommendations were presented to the employers concerned and in a large number of cases the improvements asked for were made. Where the recommendations were not carried out, requisite steps were taken to insure that the required changes were made.

Several applications were made for permission to work females and males under 18 years of age more than 9 hours a day, or 54 hours a week. In no case was such permission granted. The Factories Act of the province stipulates that "no person shall be employed for more than six hours without one full hour for food and rest." This requirement was proved inconvenient and unnecessary by both employers and employees in two pulp and paper mills. The problem was studied carefully and modifications in the working schedules suggested that would still come within the requirements of the Act.

Stationary Engineers and Boiler Inspection.—"An Act Respecting Stationary Engineers, Steam Boilers, and Pressure Vessels and Inspection Thereof" was made effective by proclamation on September 15, 1943. A summary of its provisions follows:

(1) Any person operating a steam plant (steam boiler and steam engine) must have a stationary engineer's licence.

(2) Any person operating a steam boiler only must have a boilerman's licence.

(3) Any person who inspects boilers must have a boiler inspector's licence.

(4) Any person 18 years of age or more, with proper references as to character and

experience may be a candidate for a licence to operate or inspect a steam boiler or steam plant.

(5) Licences must be renewed annually by application. Otherwise a licensee may be required to stand for re-examination.

(6) Licences may be suspended or cancelled for various reasons.

(7) Every boiler carrying more than 15 pounds pressure: (*a*) must be operated by a person having a stationary engineer's licence; (*b*) must be inspected annually by a boiler inspector licensed under this Act and the Regulations, or insured in a bona fide Insurance Company licensed under the Insurance Act, 1937.

Industrial Standards.—The Industrial Standards Act of New Brunswick has been superseded for the time being by the Federal Wages Control Order and, consequently, no new schedules of wages and hours and days of labour were issued during the year.

Ontario

In the twenty-fourth report of the Ontario Department of Labour for the fiscal year ending March 31, 1943, it is stated that the industrial war effort resulted in an extremely high level of employment in the province during the year. The growth in the volume of employment, however, was generally less pronounced than in the two preceding years, as the expansion during these two years and the recruitment for the armed forces had greatly depleted the labour market. The annual index number of employment in 1943 was 182·8, as compared with 167·6 in 1942 or an increase of more than 9 per cent over the previous year and an increase of 63 per cent over 1939 when the index number was 112·0. The index number in the manufacturing group as a whole advanced 28·1 points, while in the iron and steel industry it advanced 69·5 points during the year.

There was a decline in the percentage of unemployment reported among trade union members, the average of 13 being 1·8 points lower than the preceding year and 11·6 points lower than in 1939.

Industrial Disputes.—During the fiscal year 1943 there were 98 strikes in Ontario, in which 32,582 workers were involved in a time-loss of 171,178 man-working days. In 1942 the numbers were 109 strikes, involving 28,690 workers in a time-loss of 298,393 man-working days. Of the total of 98 strikes, 60 involved fewer than 100 workers; 30 involved from 100 to 499 workers; 4 from 500 to 999 and 4 involved more than 1,000 workers.

The chief cause of strikes concerned wage increases or cost-of-living bonuses, there being 42 for that cause alone and 6 strikes in which this was among the demands of the workers. Of the 32,582 workers on strike, 2,686 were successful in obtaining their demands; 5,844 were partly successful, 2,502 were unsuccessful and 20,500 were involved in strikes which resulted in work being resumed pending negotiations or reference to a Board. The remaining 1,050 were involved in strikes which were indefinite in result or were not terminated at the close of the fiscal year.

Mediation, Conciliation and Arbitration.—During the fiscal year 1943 the Regional War Labour Board of Ontario referred 556 cases to the conciliation officers of the Department for investigation and report. These officers handled 21 arbitration hearings involving 54 grievances. Most of the cases arose out of collective labour agreements which provided for the appointment of an arbitrator to be named by the Minister of Labour of Ontario. Prompt action by conciliation officers resulted in many strikes being averted. Of the 45 strikes reported to these officers during the fiscal year, 90 per cent were settled within a few hours.

Factory Inspection Branch.—Prosecutions were resorted to in 10 cases of violation of the hours of labour limitations and convictions were recorded by the magistrates in 9 instances. Complaints relating to safety and working conditions were investigated fully in 309 cases. Of these 169 were upheld, 107 were not upheld and 33 were found to be not under the jurisdiction of the Factory Inspection Branch. Owing to the extreme shortage of manpower there was an alarming increase in the number of children employed contrary to law, especially during the vacation period, (July and August) which it was difficult to control.

With the increased number of workers in industry, especially of inexperienced workers, there was a considerable increase in the number of accidents reported. There was, however, a decrease in the number of fatalities. The Industrial Hygiene Division of the Provincial Department of Health co-operated with the Factory Inspection Branch in the handling of numerous cases of industrial diseases.

Overtime permits were reduced in number in comparison with the previous year, but the use of multiple shifts increased and the special committee within the Department authorized to do so, granted concessions beyond the limitation of staute in order to facilitate production of war materials. Limited permits were granted in 2,569 cases for the employment of females and youths later than 6.30 p.m. and until 9 p.m. Similarly, special authorities were granted to 187 firms for the employment

of females on multiple shifts. Most of these were issued to continue for the duration of the wartime emergency and were in addition to a total of 120 granted during 1941 and 1942.

Apprenticeship Branch.—Increased efforts were made in 1943 to obtain more apprentices in the building trades. Local apprenticeship committees were organized in all the larger towns and cities of the province and closer contacts were established with primary and secondary schools. During January and February, 1943, 68 apprentices in 5 building trades received class instruction in 3 technical and vocational schools in the Toronto area. These classes demonstrated again just what can be accomplished by this form of training for those actively engaged in these trades. There was a falling off in the number of apprentices becoming available for the motor vehicle repair and hairdressing trades, owing to the demand for workers at better wages in wartime industries. During the year 32 contracts of apprenticeship were registered by employers in trades other than designated trades.

At the request of the Federal Department of Pensions and National Health, the facilities of the Apprenticeship Branch will be made available to assist returned men in preparing for their return to civilian life.

Minimum Wage Branch.—The number of employers that reported to the Minimum Wage Branch in 1943 was 22,781 as compared with 16,264 in 1942 and 16,967 in 1941. Minor cases of underpayment and non-compliance with the law as revealed in these reports were settled by correspondence. In this manner increased wage rates were ordered for 178 employees in 120 establishments during the year, as compared with 968 employees in 637 establishments during the previous year. In addition, in cases where there were repeated violations arrears of wages amounting to $2,374.69 were collected from 60 employers on behalf of 151 employees. Court action was taken against two employers for two separate infractions of the Minimum Wage Act. In one of these, the case was dismissed and in the other a fine of $25 and costs was imposed, in addition to the payment of $229.20 arrears in wages.

Boiler Inspection.—During the fiscal year there were 1,871 inspections of new boilers and pressure vessels; 1,112 inspections of used boilers and pressure vessels; second and final inspections numbered 2,269 and annual inspections under the Factory Shop and Building Act totalled 5,709.

Operating Engineers.—The Board of Examiners of Operating Engineers reported that its revenue for the fiscal year 1943 was the highest on record, exceeding that of the previous year by $402.84. The increase was attributed mainly to the increase in textbook sales. The total number of certificates issued was 17,770, which does not include the certificates maintained in good standing of operating engineers in the armed services. Thirty-eight per cent of the candidates who wrote examinations failed to pass. As the standard of examinations had not been raised, this marked increase in the number of failures was due to insufficient study and preparation on the part of engineers trying for higher grades of certificate.

Saskatchewan

Covering the year ending December 31, 1943, the ninth report since the present Bureau of Labour and Public Welfare of Saskatchewan was formed in 1934, also constitutes the twenty-third report since the original Bureau of Labour and Industry was organized in 1920.

Strikes and Lockouts.—In the year 1943 there were two strikes in the province of Saskatchewan. The coal truckers of Yorkton staged a two-day strike at the end of January for increased wages. Six employees were involved and the strike terminated in favour of the workers. Approximately 100 garage workers in Regina went on strike in April to obtain their employers' recognition of their union. The strike lasted for nearly three weeks and ended without a settlement being reached.

Freedom of Trade Union Association Act.—As required under the Freedom of Trade Union Association Act, 109 associations filed copies of their constitution and by-laws with the Minister of Labour and Public Welfare in 1942. In addition, they filed lists of names and addresses of their officers and the number of their members. The 109 organizations that filed claims reported a membership of 11,049, compared with 127 organizations with a membership of 10,138 in 1941.

Minimum Wages.—During the calendar year 1943, 3,132 firms completed wage sheet returns covering a total of 23,589 employees, consisting of 14,717 males and 8,872 females. These received $49,301.65 in overtime pay for time worked in excess of 48 hours in any week during the four-week or one-month pay period in 1943. Of the total number of employees 21,251 were employed full time, while 2,338 were employed on a part time basis. Arrears in wages to the amount of $3,316.78 were collected from 116 firms and were apportioned amongst 68 males and 106 females, or a total of 174 employees. There were no penalties or charges for the year 1943.

Apprenticeship Agreements.—At December 31, 1943, there were 12 apprentices indentured to nine firms covering trades or industries. Pharmacy was the trade of the largest number of apprentices, five being indentured in that group.

Industrial Standards Act.—During the year January 1, 1943, to December 31, 1943, a total of 570 employers or firms and 1,452 employees were governed by agreements drawn up under the terms of the Industrial Standards Act; at the end of the year there were 41 schedules in effect, 13 being in the barbering trade and 7 in beauty culture. The amount of back wages collected under the Act during the year was $1,182.47 for 19 employees.

Employment Situation.—In the autumn of 1943 the Bureau of Labour and Public Welfare again co-operated with the Employment and Selective Service offices in the province in an endeavour to interest farmers to work in the coal mines during the winter months. This program was quite successful and there was no shortage of labour in the coal mines. As a result of an application by the Central Mineworkers Union of Estevan and district, common labour rates above ground were raised from 45 cents to 52½ cents an hour. Corresponding increases for other classifications have also been made. In addition, the full cost of living bonus was paid.

Trade Schools.—There were 34 trade schools registered in Saskatchewan in 1943. Of these, 23 were Saskatchewan schools; eight were in other parts of Canada and three in the United States. In all, 60 certificates were issued to salesmen employed by these schools. It was estimated that 1,650 students took instruction during the year. Of these, 165 were enrolled in beauty schools and 19 passed successfully the examinations set under the Trade Schools Regulation Act. Other schools provided instruction in business, commercial and secretarial work; sewing and dressmaking; civil, structural, mechanical, electrical, mining engineering; automobile, and diesel engines; air conditioning and refrigeration; aeronautical engineering; welding; radio technology and operating; and story writing.

Workmen's Compensation in New Brunswick and Saskatchewan, 1943

Annual Reports of Provincial Boards

THE Workmen's Compensation Boards of New Brunswick and Saskatchewan have issued their Annual Reports for 1943, a brief summary of each appearing below.

New Brunswick

The twenty-fifth annual Report of the New Brunswick Workmen's Compensation Board contains a fully audited balance sheet covering the financial transactions of the Board, together with statistics of accidents and compensation paid for the year ending December 31, 1943. The total income for the year was estimated at $1,501,794.29 and the expenditure at $1,037,405.45, leaving an estimated credit balance of $464,388.84. Adding this to the cumulative credit balance of $1,459,899.73 carried forward from the year 1942, the estimated surplus stood at $1,924,388.57.

Accident Statistics.—Complete accident statistics for the year 1942 appear in this report. The cost of compensation amounted to $903,911.37, when a total of 11,535 compensable accidents were reported to the Board. Of these, 34 were fatal; 215 in permanent partial disability; 7,356 in temporary total disability; and 3,930 required medical aid only. Non-compensable accidents reported to the Board numbered 1,164.

The following classifications enumerate the causes of accidents reported to the Board; Prime movers, 238; working machines, 782; hoisting apparatus, 391; dangerous substances, 368; stepping or striking against objects, 1,405; falling objects, 2,150; handling objects, 1,398; tools, 1,512; runaways and animals, 94; moving trains, vehicles, etc., 347; fall of persons, 1,856; all other causes, 1,963.

Saskatchewan

The fourteenth Annual Report of the Workmen's Compensation Board of Saskatchewan for the calendar year 1943 states that the up-trend in the volume of activity characteristic of the early war years had not changed greatly during 1943. There was a slight reduction in the number of employers reporting to the Board, but an increase in the amount of payroll and also in the number of industrial accidents.

During 1943 a total of 7,718 claims were reported compared with 7,637 in 1942. On account of the 1942 claims a total of $731,923.70 was paid out by the Board made

up of $321,272.55 in compensation, $270,811.30 in pension awards and $139,839.85 in hospital and medical aid. Not including deposit accounts the total receipts for the Board during 1943 amounted to $594,294.52, while total expenditure, including estimate for outstanding claims, was $591,509.05, leaving an estimated surplus of $2,785.47.

The average assessment rate for 1943 was $1.31 per $100 of payroll, a decrease of five cents as compared with 1942, but an increase of six cents as compared with 1941.

The number of employers who reported to the Board in 1943 was 4,465, as compared with, 4,898 in 1942. The amount of payroll reported during 1943, exclusive of Dominion and Saskatchewan governments (which are not asked to estimate their payrolls) totalled $48,098,574, an increase of $2,505,989 over 1942.

Accidents in 1942 were classified as follows: prime movers, 156; working machines, 235; hoisting apparatus, 21; dangerous substances, 323; stepping on or striking against objects, 880; falling objects, 955; handling objects, 993; tools, 352; runaways and animals, 58; moving trains and vehicles, 176; falls of persons, 962; all other causes, 1,655. Of all classes, a total of 28 accidents were fatal.

Credit Unions in Ontario

THE present Credit Unions Act of Ontario was approved by the legislature of the province in 1940. It replaced the Co-operative Credit Societies Act, 1922, and the Credit Unions Amendment Act, 1939, and is administered by the Provincial Minister of Agriculture.

It is stated in the Minister's Report for the fiscal year ending March 31, 1943, that in the preceding 21 years, 140 credit unions had been incorporated in the province, of which one had been dissolved and ten others had had their certificates of incorporation cancelled.

But the development of the credit union movement prior to 1940 was slow in Ontario. Only 26 credit unions had been granted provincial incorporation between 1922 and 1939. In 1940, however, 51 additional unions were granted charters, followed by an additional 26 in 1941 and 37 in 1942 and the first three months of 1943.

The Credit Unions Act of 1940 requires all credit unions doing business in Ontario to submit reports to the Department of Agriculture not later than March 1 in each year. Their reports must give full details of membership, volume of business transacted, capitalization, assets, interest paid to depositors, dividends paid to shareholders, etc.

Among the outstanding features of the Minister's Report on credit unions for the fiscal year, 1943, were: (1) an increase of 5,029 in credit union membership; (2) an increase of 1,052 in the number of borrowers; (3) increases of $185,400.02 in paid-up shares, of $185,141.49 in deposits, and of $452,105.26 in total assets.

In addition to financing the purchase by their members of war savings certificates and victory bonds in substantial amounts, Ontario credit unions have purchased, since the declaration of war, $280,050 Dominion of Canada war loan and victory bonds out of reserve funds.

Losses through defaults on loans made by unions were almost negligible, the total charge-off during the fiscal year being $92.42, or less than five-one-thousandths of one per cent of the total amount loaned.

A significant credit union development during 1943 was the incorporation of the Ontario Credit Union League, Limited, George Scott, managing director, 152 Sutherland Drive, Toronto, Ontario. At the end of the year 68 incorporated credit unions with a membership of over 12,000 persons were members of the League.

The objects of the League were stated to be: (1) encouraging and assisting educational and advisory work among credit unions; (2) protecting and advancing the interests of credit unions which are members thereof; (3) assisting in the auditing and supervision of credit unions; (4) developing and publishing for credit unions accounting and other forms especially adapted to the conditions and laws of Ontario; (5) acting as a central depository for the idle funds of member credit unions, and in turn making loans to credit unions which temporarily have a loan demand in excess of their assets.

Although the League had only been operating for the closing quarter of 1943, it had received from its members $4,640, and made loans totalling $3,100. In connection with the fourth object above noted, the Educational Committee of the League had compiled, during 1943, three credit union pamphlets on the history, organization and operation of credit unions. The Ontario Department of Agriculture co-operated in this latter undertaking by printing the pamphlets and making them available to persons directly interested in the credit union movement.

World Trades Union Congress postponed

Owing to the exigencies of the war situation, the Council of the British Trades Union Congress decided to postpone the world trade union conference, scheduled to meet in London, England, in June.

Mr. Arthur MacNamara, Deputy Minister of Labour, honoured by University of Manitoba

In recognition of his long and notable public service, the University of Manitoba at its annual convocation in May, conferred upon Mr. Arthur MacNamara the degree of Doctor of Laws, *honoris causa*.

Mr. MacNamara, Deputy Minister of Labour and Director of National Selective Service for Canada, has been in the public service since 1914, and, except for three years spent in the Royal Air Service during the first World War, he worked for the Province of Manitoba until 1940. He was Assistant Deputy Minister of Public Works from 1929 to 1936. It was during these years that the problem of relief administration was one of the main functions of that department. He was Deputy Minister of Labour and of Public Works in Manitoba from 1936 until 1940, when he was requisitioned by the Dominion Government for Federal war service.

Mr. MacNamara came to Ottawa in January, 1940, on loan from the Manitoba Government at the request of the Federal authorities, as Chairman of the Dependents Allowance Board, Department of National Defence. He organized and directed the work of that Board for the first year of its operation, developing a system which provided for prompt payment of allowances, which system has been followed up to the present in Canada and has been adopted in the United States.

He became associated with the Federal Department of Labour in November, 1940, as Associate Deputy Minister, and as Acting Chief Commissioner of the Unemployment Insurance Commission. He organized and put into effect Canada's first unemployment insurance plan.

He was appointed Director of National Selective Service for Canada in November, 1942, and since that time has had the responsibility of directing the mobilization of Canada's manpower for the armed forces and civilian purposes. This involves responsibility for the organization and administration of the Employment and Selective Service Offices and the functioning of the mobilization call-up machinery.

As Deputy Minister of Labour since January, 1943, he has been charged with the especially heavy duties connected with labour relations and conciliation work in the Federal field, which in time of war includes all war industries.

Curtailment of plant shut-downs in summer

Hon. Humphrey Mitchell, Minister of Labour, has announced that special instructions have been sent to Employment and Selective Service Offices across Canada, with a view to curtailing the temporary closing down

of plants on war production and essential civilian production during the course of the summer.

The Labour Minister pointed out that in normal times a good many plants have developed the practice of closing down for several days—often for a few weeks—for various reasons, such as to give a vacation to employees or to carry out overhaul work.

The Minister added that as labour shortages are expected to be pronounced again this summer, the Government expects firms will agree to examine their policy carefully before going ahead with any temporary plant shut-down. While there is no desire on the part of the Government to interfere with established and reasonable vacation practices, Selective Service cannot undertake the return of workers to plants following unwarranted shut-downs. Moreover, hardship for those who lose wages during these temporary lay-offs is frequently involved.

The Minister appealed to all employers who may have under consideration any plan for a temporary shut-down, to discuss the matter with the nearest Employment and Selective Service office before reaching a final decision, in order to ensure that Selective Service Regulations may not be infringed, and also to ensure that labour shortage difficulties will not arise out of action proposed.

Policy regarding inventions in war industries

Replacing the Inventions Board established by Order in Council P.C. 4263 of May 27, 1943, there has been substituted a new set-up with a broadened administration order, P.C. 9750 of December 24, 1943. The duty of this new Board is to examine and administer all inventions and suggestions made by members of the Forces, and those submitted by civilians intended to further the war effort. The Board consists of the President of the National Research Council, the Deputy Ministers of the three defence services, and an official of the Department of Munitions and Supply.

The extension of this legislation to employees engaged in Crown Companies and in war plants owned by His Majesty was considered advisable and was embodied in Order in Council P.C. 2128 of March 27, 1944. Henceforth all inventions by employees engaged in management fee operations and in Crown Company operations are to be referred to the Inventions Board, and dealt with in the manner prescribed in Order in Council P.C. 9750.

The following provision shall apply to all management fee operations:—

"All inventions, technical information or secret processes, made, obtained or developed during the course of and in connection with the operation of the plant shall (as between His Majesty and the Company) be the property of His Majesty; provided that if the Company establishes that any such inventions, technical information or secret processes are, in essence, only improvements of the inventions, technical information or secret processes used in the operation of the plant and made available, without any charge, by or on behalf of the Company, such improvements shall (as between His Majesty and the Company), be the property of the Company, but His Majesty, his agents, servants and employees shall have the right to use the same at all times, either in the plant or elsewhere, without the payment of any royalty, licence fee or other charge in respect thereof. The Company shall execute such documents and instruments and shall do and perform such other acts and things, or shall use its best efforts to procure the execution of such documents and instruments and to cause to be done and performed such other acts or things as may be required to transfer to or vest in His Majesty the title to the inventions, technical information or secret processes which become the property of His Majesty hereunder and to any and all patents issued in respect thereof. His Majesty agrees that, if requested by the Company, he will grant to the Company a licence on reasonable terms, not in any case less favourable than those extended or to be extended to any other party, to use any patents issued in respect of any inventions, technical information or secret processes which become the property of His Majesty in virtue of this clause."

Cost of living advances fractionally

The Dominion Bureau of Statistics cost-of-living index increased from 119·0 on March 1 to 119·1 on April 1, 1944. The food index advanced 0·4 points and the clothing index 0·1 during this interval, with other groups showing no variation. Seasonal price increases for vegetables and oranges were mainly responsible for a rise in the food index from 131·1 to 131·5 despite minor declines for eggs, lard and meats. The clothing index gained fractionally from 121·3 to 121·4, while other group indexes remained unchanged as follows: rents 111·9, fuel and light 113·0, home-furnishings and services 118·4, and miscellaneous items 109·0. After adjustment to the base August, 1939 as 100 the index was 118·2 at April 1.

Employment and industrial statistics

The table below shows the latest statistics available reflecting industrial conditions in Canada.

Further contraction in employment was revealed at March 1 by the figures published by the Dominion Bureau of Statistics. The decline while seasonal in character was larger than usual in the period since 1921. The 14,383 establishments reporting to the Bureau showed a total working force of 1,831,310 at March 1 which was 0·7 per cent smaller than at February 1. The index was 181·9 at March 1, 183·2 at February 1, 181·5 at March 1, 1943 and 106·5 at March 1, 1939. On the other hand the weekly salaries and wages paid to this recorded working force totalled $59,028,861, an increase of 0·8 per

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† Week ended April 27, 1944.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base, June, 1941=100. (4) Base, 1935-1939=100. (5) Adjusted, where necessary, for seasonal variation. (6) Notes in the hands of the public. (7) Figure for four weeks ended April 29, 1944, and corresponding previous periods. (8) MacLean's Building Review.

cent as compared with the beginning of February. The per capita weekly earnings advanced from $31.76 at February 1 to $32.23 at March 1. The average at March 1, 1943, was $30.72.

Employment in manufacturing declined at March 1 of this year for the first time since 1920 when the record was commenced. The decline occurred in industries producing durable goods. Other industries to show decline at March 1 were logging, mining, communications, construction and maintenance and retail trade. The declines in construction and trade were greater than usual at the beginning of March in the record of 24 years. Improvement was recorded in services and transportation.

The index of the physical volume of business rose to 247·8 for March as compared with 241·6 for February and 231·7 for March, 1943. The level for March was slightly lower than that of December, 1943, which was the highest point in the record. Somewhat lower volume was indicated for manufacturing but the other principal groups in the general index were higher. These are mineral production, construction, output of electric power, and the distribution group. During the first quarter of 1944 the business index averaged 7·5 per cent higher than for the similar period in 1943. In the same comparison wholesale prices advanced 5·1 per cent, bank debits 16·1 per cent, mineral production 11·7 per cent, manufacturing 5·1 per cent, cattle slaughterings 31·9 per cent, hog slaughterings 77·2 per cent, cheese production 20·8 per cent, contracts awarded 33·0 per cent, the value of exports 38·0 per cent, imports 7·1 per cent, and carloadings 13·3 per cent. The production of creamery butter declined 11·9 per cent and the consumption of raw cotton 9·8 per cent in this same comparison.

Incorporation of cost-of-living bonus in basic wage rate

The National War Labour Board stated recently that information reaching Ottawa indicates that some employers still appear to be in doubt as to the application of the regulations which required the incorporation of cost-of-living bonus in basic wage rates. This regulation was embodied in the Wartime Wages Control Order, 1943, which revoked and superseded the Order previously in effect.

The Board points out that all employers subject to the Wartime Wages Control Order were required, commencing with the first payroll period on or after February 15 last, to establish a new wage rate inclusive of the cost-of-living bonus previously paid.

The Board further explains that all employers not specifically excluded from the provisions of the Wartime Wages Control Order were required to pay a cost-of-living bonus of 60 cents per week commencing with the first payroll period on or after August 15, 1942, to adult male employees and other employees earning $25 or more a week and 2·4 per cent of the weekly wage rate to male minors and female employees receiving less than $25 a week; and that beginning with the first payroll period on or after November 15, 1943, it became obligatory for employers to increase this bonus to 95 cents a week or 3·8 per cent of the weekly wage rate.

Unemployment insurance records to be kept by employers

Failure on the part of some employers to keep adequate books and records required by the Act, is causing difficulty in some cases in the administration of the Unemployment Insurance Act, according to the Unemployment Insurance Commission.

The Commission announced recently that it has given authority to its regional inspectors to take action with a view to remedying the situation.

Inspection staffs are required to report whether or not adequate records are kept, and, if not, to indicate to the employer what records he is to keep. In the case of small employers with no office staff, it is understood that records shall be kept to the minimum.

If it is found later that an employer is not keeping records as directed, the Inspector is instructed to submit all details necessary to the institution of a prosecution.

Under the Act the Commission may require any person to keep such books, records and accounts as it directs. It is provided that, in any case, the records must contain at least the name and address of each employee, whether insurable or not, his insurance number if insurable, the actual days on which work is done by each employee, the number of such days by pay-periods, the gross remuneration payable to each employee by pay-periods, and all deductions from the gross remuneration payable to each employee for the purpose of contributions.

The Commission states that while the records now kept by employers of most insurable persons are adequate, it is necessary to bring all employers into line in this respect.

Survey of industry in Ontario

A recent survey by the Department of Labour for Ontario indicates that of the total male employees employed in industry in the province during the fiscal year 1942-1943, 40·5 per cent worked a standard work-week

of 48 hours or less, whereas 59·5 per cent worked a standard week of from 49 to 60 hours. Of the total female workers employed during the same period, 50·2 per cent worked a standard week of 48 hours or less and 49·8 per cent worked a standard week of from 49 to 60 hours. It was ascertained also that of the total persons employed 43·2 per cent worked a standard week of from 40 and less to 48 hours. The building industry and wholesale and retail merchandising were not included in the survey.

A total of 7,742 firms that employed an aggregate of 341,815 males and 4,265 firms that employed 146,897 females were included in the survey. Of the 1,307 firms that employed both male and female workers, 395 worked a standard week up to 44 hours; 348 from 45 to 48 hours; 272 from 49 to 50 hours; 119 from 51 to 54 hours; and 180 from 55 to 60 hours. It was found that 754 of the 1,307 firms surveyed granted at least one week's holidays with pay.

Credit unions prosper in P.E. Island

According to the report of the Inspector of Credit Unions in Prince Edward Island for the 12 months ending September 1942, credit unions in that province increased their total assets by 27·1 per cent; shares and deposits 28·8 per cent and their reserves by 21·3 per cent.

There were 45 credit unions in the province which had total assets of $126,664.87 when the report was made. Loans outstanding amounted to more than $85,000, and cash on hand was over $34,000. Shares and deposits amounted to almost $114,000.

The report points out that "these figures together with the fact that total loans granted during the past year were under the amount lent the year before, reflect the improved financial condition of the people of this province. The credit unions are sharing this improvement. It is claimed that if this growth of the credit unions is continued in the Island province they should be an important factor in the solution of some of the problems of post-war rehabilitation."

Ontario Federation set up by C.C.L. Unions

A constitutional convention of some 90 delegates from Labour Councils, chartered unions and branches of affiliated unions was held in Toronto on April 15 and 16. The purpose of the convention was to consider the draft constitution of the Ontario Federation of Labour which had been prepared by a special committee and had been approved by a provisional committee of delegates from labour councils in Ontario that had convened in February.

The functions of the Federation were stated as being: The preparation of legislative programs and the study of provincial legislation affecting the interests of the workers. Then too, the Federation had under advisement the provision of facilities for the preparation of briefs to the Provincial Labour Relations Board, the Regional War Labour Board and other bodies. Assistance might also be given in the drafting of agreements.

A decision was reached to convene a further meeting in August. In the meantime, all Congress Unions in the Province will be approached with respect to affiliation with the Federation.

Congress President, A. R. Mosher, presided and the following provisional officers were elected: President, Elroy Robson, Director of Organization for the C.C.L. in Ontario Secretary-Treasurer, William Sefton, a representative of United Steel Workers of America.

Post-war Planning Committee set up in Manitoba

The Manitoba Government has set up an Advisory Committee on Co-ordination of Post-War Planning consisting of 19 members to whom others may be added by order in council. The function of the Committee is to advise the Government through the "Committee of members of the Executive Council on Post-War Reconstruction" with respect to co-ordinating plans submitted in order that duplication and conflict may be eliminated and a well-integrated programme developed. To effect this the Advisory Committee will investigate problems and recommend plans for solving them, establish subcommittees to deal with special subjects, receive submissions and confer with various organizations.

Labour and Public Welfare in Saskatchewan

The Saskatchewan Bureau of Labour and Public Welfare reports that in 1943, thirty permits were granted under the Factories Act enabling women and children under 16 to be employed between six a.m. and nine p.m., provided that the forty-eight hour weekly limit is not exceeded. The Act also permits exemption from the 48-hour week prescribed for women and children under 16, for not more than 36 days a year. Thirty-nine such exemptions were issued to 29 firms covering an aggregate of 199 days.

The Minimum Wage Board returns from 3,132 firms show that in the cities of the province, 73 per cent of the employees received

more than $14 a week, the highest minimum rate in any Board Order governing cities. In the towns, 62 per cent received more than $12 a week, the highest minimum rate in any Order for towns.

The total arrears of wages collected during the year were $4,557.48. Of these $3,316.78 were collected under the Minimum Wage Act, $1,182.47 under the Industrial Standards Act, and $58.23 under the Building and Trades Protection Act.

Labour relations in Newfoundland

Important wartime changes have been made in connection with labour matters in Newfoundland. Prior to the outbreak of war differences between employers and workmen were settled by negotiations, with the assistance of government members or officials. After the outbreak of hostilities, regulations were issued providing for the setting up of five tribunals or boards to deal with disputes in essential industries.

Following recommendations made by the Newfoundland Federation of Labour, the government in June, 1942, appointed a Labour Relations Officer. With one or two exceptions, all disputes that have arisen since that time have been settled with the assistance of the Labour Relations Office. In addition to dealing with industrial disputes on the island, this office conducted a national registration, investigated all proposed labour legislation, collected statistical data and aided in the recruitment of labour for work outside Newfoundland.

The Labour Relations Office promoted the Trade Disputes (Arbitration and Inquiry) Act and a bill to provide for the payment of wages to workmen in money rather than in kind. Other labour legislation being considered is (1) a Bill dealing with medical services for miners; (2) minimum wages for workers in organized trades and industries; (3) extension of the scope of the Workmen's Compensation Act and (4) compulsory collective bargaining.

According to the *Commercial Intelligence Journal,* industrial relations in general have been satisfactory, and the Labour Relations Office has been an important contributor to this situation. Many strikes have been avoided, while work stoppages that have occurred have been of short duration largely because of the intervention of the Labour Relations Office at an early stage.

In a report recently submitted by the Labour Relations Officer to the Commissioner for Public Utilities it was shown that in 1943 approximately 10,000 persons were engaged in construction work in Newfoundland; 2,300 were employed by the fisheries and 1,400 men left the island in organized groups for work in Canada and Labrador.

Holidays in industry, 1944, in Great Britain

The *Ministry of Labour Gazette* published in its March issue a statement of the Ministry of Labour and National Service with respect to holidays for workers in 1944. The following summary indicates the policy recommended for England, Wales and Scotland. At the outset the statement points out that the present year promises to be a difficult one, probably demanding unforeseen sacrifices and that, therefore, any regulations must be considered as provisional and subject to last minute alterations, or withdrawal.

In particular, it is known that the strain on the railways—already acute—will be greatly increased. Week-end travel should be avoided as far as possible. Consequently, workers desiring to return to their homes for their holidays should endeavour to begin and end their holidays in the middle of a week. Employers are urged to co-operate with the Regional Boards of the Ministry of Production in order to obtain "the maximum practical degree of staggering both within an establishment and between firm and firm and district and district."

Local authorities are again asked to organize "adequate holiday at home" programs, in order that those who refrain from travelling may be provided with alternative facilities for recreation and amusement.

In the development of the war and the claims of production permit, the Government is of the opinion that industrial agreements and common practice in relation to holidays should be observed with respect to "approved" or statutory holidays in England and Wales as well as in Scotland.

Owing to the special arrangements necessary in regard to both the production and movement of coal, a separate bulletin about holidays in the coal mining industry will be issued by the Minister of Fuel and Power.

Payment for work done on days which would ordinarily be holidays should be governed by existing law, or any relevant provisions laid down in existing agreements, or as modified by agreement with the trade union concerned.

Employers are urged to note that "in so far as any decision to follow Government recommendations entails a departure from arrangements agreed or established by custom or practice, care should be taken to agree the variations beforehand with the appropriate representatives of the workers."

Wages Board for canteens in Great Britain

The first Wages Board to be established under the British Catering Wages Act, 1943 (L.G., 1943, p. 1206) has jurisdiction over industrial and staff canteens. About 16,000 canteens, employing nearly 200,000 people, are affected. In accordance with the Act, the Board was set up by the Minister of Labour and National Service on the recommendation of the Catering Wages Commission. In a White Paper issued on March 16, the commission explained that the remuneration and conditions of employment of canteen workers were subject to considerable variation and that there was no reason to believe that industrial catering had not come to stay.

The Board consists of equal numbers of employers' and workers' representatives, together with three independent members, one of whom is chairman and one deputy chairman. It may submit to the minister proposals for fixing wages and rest intervals and for providing holidays with pay. The minister must either refer the proposal back to the board or pass an order putting it into effect. The board may also make recommendations through the Catering Wages Commission on conditions of work, health and welfare and on the improvement and development of industrial catering.

The Board has no jurisdiction over canteens run directly by the Crown or a local authority, those run in connection with catering businesses, such as hotels, boarding houses and restaurants or those at hospitals, schools, or similar institutions. The catering activities of Crown and local authorities are to be considered separately by the Catering Wages Commission, and wages and other conditions in hotels and restaurants generally are also to be dealt with later.

Dispute over recognition of office workers' union in Great Britain

A Court of Inquiry which was appointed under the British Industrial Courts Act, 1919, to investigate a dispute between the Clerical and Administrative Workers' Union and three Welsh colliery companies presented a unanimous report in December, 1943. It found that the question in dispute was "simply one of recognition or non-recognition of a union" and that the reasons of the companies for refusing to grant recognition were "totally inadequate." It expressed its "disapproval of the attitude of the three companies and of their boards of directors, both toward the efforts of the union and of this court." The court which was an *ad hoc* board similar to a board of conciliation and investigation under the Canadian I. D. I. Act, was under the chairmanship of Sir Charles Doughty, K.C.

The Clerical and Administrative Workers' Union began to organize the office workers of the collieries in 1941. In 1942 it submitted claims to the company concerning the conditions of employment of these workers, but the companies replied that since they had found it satisfactory in the past to deal direct with their clerical staffs they were not prepared to negotiate with the union. The union then reported to the Minister of Labour and National Service that a dispute concerning conditions of work existed and the Minister referred it to the National Arbitration Tribunal under the Conditions of Employment and National Arbitration Order. The tribunal made its award on August 28, 1942.

The union then suggested that there should be joint discussion regarding the application of the tribunal's award. The companies refused this suggestion and put the award into effect without reference to the union. The Ministry of Fuel and Power attempted to persuade the companies to change their stand, but without success. Finally, on October 4, 1943, the union notified the Ministry of Labour that its branches had tendered 21 days' notice of their intention to withdraw their labour unless the dispute was satisfactorily settled. Following the decision of the Ministry to appoint a court of inquiry the employees decided to remain at work.

The companies raised certain objections to dealing with the union, but the court did not consider any of them to be important. In regard to the claim that direct dealings between the companies and the individual clerks had been satisfactory in the past, the court stated that it was "not impressed by the professed readiness of these persons to meet a grievance privately expressed," citing cases where "individual representations met with scant response and a not very courteous reception." In one instance, where there was a "genuine grievance" affecting a large number of employees of two of the firms, the matter was not settled in one of the companies until a government conciliation officer had intervened nor in the other until it was on the point of being brought before the National Arbitration Tribunal. The court was convinced that the delay was not due to "any desire to deprive the clerks of their just rights" but that "it simply arose from the fact that nobody took the trouble to look into the grievance and it was not backed by the force of union representation."

The companies also stated that the union had only small representation in the South Wales coalfield as a whole, but the court considered this to be of little significance since in the three companies concerned a majority of the employees were members of the union.

Finally, the companies objected that some of the grades which the union claimed to represent occupied confidential positions. The representatives of the union, however, had "expressed their willingness to discuss this and they had no desire to include in their negotiations any parties to whom serious objection could be taken."

Annual Report of U.S. Labour Relations Board*

During the year ending June 30, 1943, the Board received fewer charges of employer unfair practices than in any of the five preceding years and more requests for secret ballot elections were presented to the Board than in any year since its inception. It is pointed out by the Chairman of the Board that this exceptional recourse to orderly elections to determine collective bargaining representatives is all the more noteworthy in the light of the fact that more than 75 per cent of all the elections were one-union situations and not involving contests between competing labour organizations.

The special contribution of the Board under the National Labour Relations Act was, first the elimination of unfair labour practices which impede the acceptance of sound collective bargaining practices; and second, the prompt determination of disputes as to the choice of bargaining agents by employees.

During the year covered by the report the Board received 9,543 cases. In addition to these 2,860 cases were pending at the end of the preceding year. In all 9,722 were disposed of. More than 10 elections were held daily in the nation's war plants. In this way more than 2½ million workers were enabled to express their choice of bargaining agents. Procedure in handlingfi cases was speeded up, until by the end of the year it had been cut virtually in half. This was accomplished in the face of reduced appropriations and reductions of approximately 40 per cent in staff due to calls to the armed services.

That unfair labour practices have not been entirely eradicated is shown from the various remedies utilized by the Board in the year under review. A total of 7,111 employees were reinstated after discriminatory discharges, while an additional 1,250 were reinstated after strikes caused by unfair labour practices. Back pay of $2,284,593 was paid to 5,115 workers who had been victims of discriminatory practices. Company-dominated unions were dis-established in 205 cases. Collective bargaining began as part of the remedy in 493 cases.

In carrying out its task of determining representatives for the purposes of collective bargaining the Board conducted 4,153 elections during the year ending June 30, 1943. Unions received 82 per cent of the 1,126,501 valid votes cast by the workers. A union was chosen as representative for collective bargaining in all but 13.8 per cent of the elections.

Affiliates of the A.F.L. participated in 2,018 elections, winning 1,398 of them and receiving a total of 267,118 votes. Affiliates of the C.I.O. participated in 2,350 elections winning 1,766 of them and receiving a total of 515,271 votes. Unaffiliated unions participated in 745 elections, winning 416 of them and receiving a total of 140,780 votes.

Collective agreements in U.S. Agricultural machinery industry

An article entitled *Union Agreements in Agricultural-Machinery Industry, 1943*, appeared in the January, 1944 issue of the *Monthly Labour Review* and has now been re-printed as Bulletin No. 761 of the U.S. Bureau of Labor Statistics. It analyzes the provisions of 36 agreements covering nearly 90 per cent of the employees in the industry who are working under agreements.

It is stated that by September, 1943 there were almost 96,000 workers in the industry. About 70 per cent of these are covered by collective agreements, and almost all the large plants are covered. About 55 per cent of the workers under agreements are represented by the United Farm Equipment and Metal Workers of America, affiliated with the Congress of Industrial Organizations. Other unions, notably the United Automobile, Aircraft and Agricultural Implement Workers of America (C.I.O.), which has agreements covering 20 per cent of the organized workers, are also in the field. Federal unions of the American Federation of Labour represent about 15 per cent and some other A.F.L. unions have also negotiated agreements.

The provisions of the agreements are dealt with under the following heads:—coverage and duration, union status, wage provisions, pay for overtime, week-end work and holidays, paid vacations, seniority rules, discharge, military service and war jobs, adjustment of disputes and strikes and lockouts.

Women personnel officers in industry in U.S.A.

The qualifications and duties of women personnel officers in war industries are the subject of Special Bulletin No. 16, published by the Women's Bureau of the United States Department of Labour, in February.* The experi-

*See also: Statement of H. A. Mills, chairman N.L.R.B. to Congress Feb. 27, 1944.

* Dorothy K. Newman, *The Woman Counsellor in War Industries*, U.S. Department of Labour, Women's Bureau, Special Bulletin No. 16.

ence of airframe and ammunition plants which have evolved an effective system for handling the problems of women workers over the past two years is summed up and the results of a survey of women's personnel work in shipyards are included.

A broad view is taken of the scope of women's personnel work. Where large numbers of women are employed, a separate branch of the personnel department to deal with their problems is recommended. The head of the branch should have a voice in plant policies governing the selection, placement, training and supervision of women workers. She should co-operate with other departments to see that adequate provision is made for the safety, training and medical care of women. She must arrange for proper washroom, toilet, restroom and lunching facilities. It is her duty to maintain records of women employees and to train and supervise counsellors and interviewers. Nor can she ignore conditions outside the plant such as housing, recreation facilities, transport, child-care arrangements, etc., which affect attendance and turnover.

Close contact with women in the shop should be maintained through counsellors who assist women workers in adjusting themselves to factory life. The counsellor informs the new employee about plant rules, hours of work, clothing requirements, transport arrangements, etc., and introduce her to her fellow-workers and supervisors. Careful follow-up is necessary to prevent the formation of bad work habits. Counsellors should be consulted in selecting women for promotions, upgrading, and transfers, and when discharge is contemplated. They may assist in remedying grievances by acting as a liaison between the women and their foremen. They are responsible for supervising the maintenance and use of rest rooms, washrooms and cloakrooms but should not act as policemen.

Counsellors should not attempt to deal with problems requiring the professional attention of a social worker or physician but should refer the workers to competent persons who can help them.

If only a few women are employed one or two women officers may be able to handle all aspects of the work. It is important that women personnel officers have good education and personal qualities which will enable them to work well with others and to organize their work efficiently. They should also be thoroughly acquainted with plant organization, policies and processes. If possible, senior officers should have special training and experience in industrial relations.

Youth welfare in transition period

The U.S. Children's Bureau Committee on Children in Wartime have set out ten measures which must be taken in order to ensure the welfare of juveniles in the period of transition from war to peace.

Health services and all types of medical care must be widely extended and made available to everyone. Child labour must be regulated, and plans made to assure educational and employment opportunity for young persons in the demobilization period. Family life must be protected through housing programs, extension of social security, rehabilitation services for families disrupted by the war, and by securing an adequate, stable economic basis for the home. Child-welfare services must be developed so that they are available to every child needing them. Young people themselves must share in planning and carrying out community recreation schemes, and other plans initiated for their benefit. All these measures involve training professional workers and preparing volunteers to assist them.

Finally, legislative standards must be reconsidered from the standpoint of these objectives, and every citizen educated concerning the importance of working towards their realization and assuming some responsibility for them.

Equal pay principle makes progress

"Although many industries still pay women beginners less than men the 'equal pay for equal work' principle advocated by unions and government has advanced during the war", it is asserted by the Office of War Information at Washington.

As evidence of this advance the O.W.I. reports that more than 2,250 firms in the United States have voluntarily equalized rates for men and women doing the same amount and quality of work, since the War Labour Board announced its policy of equal pay in November, 1942. These voluntary equalizations have increased the rates of about 59,500 women. Decisions of the W.L.B. have benefitted women in automotive, lumber, electrical and steel industries, among others.

However, it is stated that in many plants where equal pay for comparable work has been established, women's pay is still smaller than men's because of the type of work to which they are assigned. Moreover, promotions in many instances are less frequent for women than for men.

The presumption that men require more pay than women, because of obligations with regard to dependents has been in some measure challenged. In an official study of more than

155,000 women, it was ascertained that about 60 per cent contributed to the support of dependents.

Reports of the New York State Department of Labour are cited to show that the incomes of women factory workers in that State had increased 72 per cent between May, 1939, and February, 1944. But this increase is far from being a recognition of the equal pay principle, as the increase resulted from longer hours and overtime pay rather than from increase in rates.

Wages of women replacing men in New York industries

The results of a study of the wages paid to women replacing men in industry have recently been published by the New York State Department of Labour. The survey covered 396,000 workers in 143 manufacturing and 56 non-manufacturing plants such as laundries, hotels and restaurants. A somewhat similar study was made in March, 1943, by the National Industrial Conference Board which obtained data from 155 plants employing 687,000 workers (L.G., Jan., 1944, p. 71). Both studies revealed the same general trends in rates paid to women although a slightly higher percentage of the plants covered by the New York study paid the rate for the job.

In two-thirds of the manufacturing plants and one-third of the service industries studied by the New York State Department of Labour, at least half the women workers were doing work formerly performed by men or comparable to men's work. About 60 per cent of the plants paid the same entrance rates to men and women on comparable work. Practically all the firms in this group which had automatic pay progression plans advanced both sexes at the same rate up to a certain maximum. Of the 44 plants which provided automatic increases 4 reduced the differential, 14 eliminated it by the end of the progression period, 10 increased it and 16 made no change in it. Few of the non-manufacturing firms gave automatic pay increases. An equal pay policy was more commonly found in the metropolitan area than upstate. Of the 98 manufacturing plants with union agreements, 73 had contracts providing the same rates for men and women on comparable work.

In three-fifths of the manufacturing plants with wage differentials the women's rates were from 10 to 20 cents below those for men on similar work. In the service industries the differential was in most cases under 10 cents but the low rates prevailing in such industries made a small differential more significant. Some firms reported that women's rates were determined by the prevailing rates for jobs usually held by women in the plant or locality. Others fixed lower rates for women because they had had to make job changes before hiring them. However, an analysis of job changes ranging from breaking down processes into their component parts to removing responsibility for setting up machines showed that, except for adjustments to reduce weight-lifting, few were directly attributable to the entrance of women workers. Most changes had been made before women began to replace men and were designed to speed production and reduce training of new workers. Of the 60 plants which had made changes for women workers only, 25 paid the same initial rate to inexperienced men and women. Moreover, it was pointed out that the installation of mechanical lifting aids benefits both sexes and results in a valuable saving of energy and manpower.

Employers reported that women's production equalled or exceeded that of men in 88 per cent of the manufacturing plants and in about two-thirds of the non-manufacturing ones. There did not appear to be a "consistent relationship between employers' evaluation of comparative production by men and women doing similar work and the starting rates paid to women."

A considerable number of women were found in skilled manufacturing jobs paying from 70 cents to more than $1.50 an hour. Over three-fourths of the manufacturing plants and all of the service industries except dry-cleaning reported that they were using women as supervisors. Some stated that women were not filling the highest jobs chiefly because they had not been employed long enough to acquire sufficient experience or seniority.

A review of the United States' National War Labour Board's policy on rates for women doing men's work is given and attention is drawn to statements by the Government, labour and management endorsing the equal pay principle. It is also pointed out that four States, Illinois, Michigan, Montana and Washington now have equal pay laws.

UAW-CIO expands health services for members

A recent notable development in the formation of industrial medical research by labour unions was the acquisition by UAW-CIO of the late Edsel Ford's mansion and grounds at Detroit for use as a medical research institute.

It is stated in the *United Automobile Worker* that "the building and grounds will be particularly appropriate for use by the Medical Institute." It is pointed out that there are ample grounds and facilities to serve the present needs of the Institute and to permit of extensions and additions as they may be required.

This phase of labour union activity has been developing for a number of years. A cloak makers' strike in 1910 revealed deplorable sanitary conditions in the plants which impaired the health of the workers. This led to the formation of a Union Health Centre in 1913 to enable the low paid government workers to obtain competent medical attention at rates within their means.*

Since that time other unions have provided similar benefits for their members. These have been primarily diagnostic services, provided by full-time medical examiners and specialists provided with the necessary medical equipment. Research work has been carried out in connection with the causes and the prevention of many industrial diseases. The UAW established a centre some years ago, but for a time the work was discontinued.

It is asserted by the *United Automobile Worker* that the health of the American worker is not good. Reports of the Social Security Board at Washington are quoted as saying that one billion man days have been lost to the nation's war effort by reason of sickness. The Medical Research Institute through its surveys and educational activity in relation to occupational diseases appears to have potential value in bringing about a reduction in this loss in future, as well as in extending the working-years of workers, especially those whose work exposes them to dust, poisonous fumes, etc.

U.S. Exposition shows advantages of labour management

Considerable public interest was taken in a labour-management exposition held recently in Washington. The purpose was to emphasize the need for "20 per cent more (production) in 44" and to show how the joint efforts of labour and management were helping to attain that goal.

According to *Labour-Management News*, official weekly publication of War Production Drive, War Production Board, Washington, the sponsors of the exposition, "in more than 4,000 war plants with 7,000,000 workers the teamwork of labour and management is directed to the single purpose of improving war production."

The numerous exhibits at the exposition served to show that more and better weapons and equipment for the fighting forces were being produced. The exhibits also illustrated the varied activities of 72 labour-management committees in 275 plants throughout the country. In addition there were special events, including the presentation by Mr. Donald Nelson, Chairman of the War Production Board, of certificates honouring eight war workers whose suggestions notably improved and accelerated production. Seven women who had made exceptional records in war production were also guests of the exposition.

United States NLRB upholds employer in unlawful strike case

In a majority-decision, the National Labour Relations Board of the United States, recently upheld an employer who discharged nine workers for an unlawful strike, and thus reversed a trial examiner's order that the employer should reinstate the men with back pay on the ground that the Wagner Act preserved their status while on strike.

According to a report in the *New York Times* of April 17, the union, which had been the bargaining agent for a number of the Company's employees since 1939, reached an agreement with the Company for wage increases, shortly before the President's wage control order of October 3, 1942, prohibiting increases, unless approved by the WLB. Subsequently, the Company and Union made a joint application to the WLB for approval of the proposed increases, but by June, 1943, the WLB had taken no action. On June 10, the union members voted to strike unless the Company granted the increases immediately. This the Company refused to do without the WLB's approval, and the men went out on strike. On the following day, the Company notified them that it regarded the strike as a termination of their employment. About ten days later the union requested the reinstatement of the men, which the Company denied.

The majority of the Board held that the strike was neither provoked nor preceded by unfair labour practices and, consequently, upheld the employer's action. It was further pointed out that while the National Labour Relations Act was directed against employer rather than employee misconduct, "this does not mean, and never has meant, that employee misconduct is necessarily irrelevant" in determining violations of the regulations.

The Chairman of the Board based his dissent on a slightly different interpretation of the Act and held that the employer should reinstate the workers, but that, owing to the nature of the strike, it would be legitimate to deny them back pay.

Telegraph messengers under U.S. Fair Labor Standards Act

In the first important case interpreting the child-labour provisions of the Fair Labor Standards Act, the United States District Court for the Southern District of New York decided on October 7 that the Western Union Telegraph Co. had violated these provisions.

* *The Needle Trades* by Seidman p. 287.

The Company was charged with employing "oppressive" child labour contrary to the Act. "Oppressive" child labour means the employment of children under 16 in any occupation and between 16 and 18 in specified hazardous ones. In this case children under 16 were employed as messengers and minors between 16 and 18 as drivers of motor vehicles.

The Act applies to goods produced for shipment beyond the boundaries of any one state. The company admitted the employment of these young persons but denied that the Act applied to it since its business was merely to convey ideas and not to produce goods. The Court held that messages were "goods" within the meaning of the statute.

In upholding the applicability of the law to the Western Union Co. the judge declared that "the statute establishes a national policy and a national standard of child labour. The history of the statute is consistent only with the conclusion that Congress intended to keep the arteries of commerce free from pollution by the sweat of child labour."

Safety training in school shops in United States

A booklet outlining methods of teaching safety in vocational school shops has recently been published by the Michigan State Board of Control for Vocational Education.* The Director declares in the introduction that "the time to set safety habits is when the learning process begins" and adds:—

> The surest way to prevent accidents is to train students so that correct operations become automatic, and the worker, through habit as well as judgment, obtains maximum safety.

Mechanical guards, posters or printed rules tacked on the walls cannot be, in his opinion, substitutes for intelligent and careful operation on the part of the student.

The booklet contains a chapter on general precautions against fire and accidents in school shops and a brief history of accident prevention work. The remaining chapters contain safety instructions for foundry, electrical, auto mechanics, printing, welding and other types of school shops. Tests at the end of each chapter check the students' knowledge, There are reproductions of safety posters, cartoons and actual photographs of school shops and safety equipment.

It is recommended that in addition to demonstrating safe work practices when teaching each new process, there should be a discussion on some phase of safety education at least once a month. Accidents, however minor, can be used as object lessons. The appointment in rotation of a student safety engineer for each class is considered one of the best means of enforcing safety rules. The student safety engineer should give his full time to seeing that safe practices are observed and should be given a check list of points to watch. He reports on accidents and misconduct in the shop, sees that tools are in good condition, checks first-aid supplies, enforces good housekeeping and sees that students keep ties tucked in, sleeves rolled up and use all safety devices. Sample daily report forms for safety engineers in different types of shops are given in the booklet.

U.S. Supreme Court decisions concerning employers' anti-union activity

It was reported in the *New York Times* and in the *New York Herald-Tribune* on April 11, that in two separate decisions the Supreme Court of the United States had ruled that a union may continue as a collective bargaining agent, even though its membership had dropped to less than a majority of the eligible employees in a plant, or even though its membership had repudiated the union if the loss in membership or the repudiation of the union follows "wrongful" activities on the part of the employer.

In the first case heard by the court, forty-five of the eighty members in a company's factory had designated the union as their bargaining agent. However, as a result of the Company's refusal to deal with the union and its active anti-union campaign, the union's membership had dropped to thirty-two, less than a majority of the employees. The matter had been referred to the National War Labour Board which had ordered the Company to bargain with the union charging that the "unlawful refusal of the employer to bargain collectively" had led to the membership decline. In upholding the ruling of the Board the Supreme Court decision stated that a bargaining relationship, once rightfully established, "must be permitted to exist and function for a reasonable period of time in which it can be given a fair chance to succeed."

In the second case, the Company had recognized the Union as agent for its twenty-six employees, but when certain of the employees had expressed dissatisfaction with the union and had threatened to leave the Company unless their wages were increased, the Company had negotiated with them as individuals on the question of wage increases and had then refused to deal with the union. The majority decision of the Supreme Court stated that even though workers may wish to revoke their designation of a collective bargaining

agent, neverthless, "orderly collective bargaining requires that the employer be not permitted to go behind the designated representatives, in order to bargain with the employees themselves prior to such revocation."

Employers' guide in hiring of women

A special bulletin of this title, issued by the Women's Bureau of the U.S. Department of Labour, outlines for the guidance of employers the essential steps in the successful utilization of women in industry.

It covers such pre-employment measures as securing the workers' co-operation before hiring women, providing adequate service facilities, surveying suitable jobs, and adapting them to women. Proper training and personnel selection are stressed, attainable with the aid of women personnel officers who have well-defined duties and an accepted status. An 8-hour day with two rest periods, a 48-hour week, chairs where possible, and safe, suitable work-clothing are considered necessary for the highest output over a long period. Equal opportunity with men is recommended, involving up-grading when a woman makes good at her job, and wage-rates based on job analysis.

Results of migration of war workers in United States

The Office of War Information in Washington, in one of its recent reports, declares that the migration of war workers into centres of war production has brought about a marked re-distribution of population in the United States during the last three and a half years.

It is shown that 469 counties throughout the country registered increases in population between April 1, 1940 and November 1, 1943. Of these, 152 recorded gains of 15 per cent or more. During the same period, 2,620 other counties recorded decreases in population.

The 469 counties which registered an increase had a total gain in population of 4,857,885. It is pointed out that this figure may be taken as the minimum number of persons who migrated from one place to another, because in none of these areas would the natural increase be as great as the loss to the armed forces. Then too, uncounted numbers of persons have changed location several times.

The 2,620 counties which registered decreases in population had an aggregate loss of 8,879,105. In spite of an excess of births over deaths in the period April 1, 1940 to November 1, 1943 of about 4,611,000, the civilian population of the United States decreased by approximately 4,000,000, or 3·1 per cent. This is accounted for by the induction into the armed forces of roughly 9,500,000 men and 138,000 women.

The War Manpower Commission is quoted as having reported that the trends of shifting from states and areas of few job opportunities into areas which had a high demand for workers have taken place chiefly in three directions (1) toward the West Coast, (2) the central region (Kentucky, Ohio and especially Michigan), (3) and the North Atlantic seaboard. However, there have been many more or less local variations of these trends and in some instances in-and-out-migrations have occurred simultaneously.

The report cites many such local cases and the motives that apparently actuated the almost constant labour flux since the outbreak of war. In general, labour movements were toward centres where large wartime contracts were placed. There were however notable exceptions such as Chicago, New York and Boston, cities which lost 1·4 per cent, 7·1 per cent and 5·1 per cent of their populations respectively. All such centres probably had sufficient unemployed, or persons employed in non-essential activities, to cushion the immediate effects of an expanded industrial program.

The War Manpower Commission is quoted as assuming that the end of the war will be followed by another great shifting of population, in reverse. However, it is also pointed out that to judge by the experience following World War 1, thousands of workers may be expected to remain where they are and take chances on unemployment. "Under any circumstances, the final effect of wartime and post-war moves will be a general re-sorting of population that will leave its marks on the country for years to come."

Italian labour unions being re-organized

In its issue of March 17, the United States Labour Press Service states that trade unions in Sicily and the part of Italy occupied by the Allies were being rapidly re-organized along democratic lines after twenty years of fascism.

It is pointed out that one of the first steps taken by the Allied Military Government (A.M.G.) was to abolish the whole fascist labour setup in order to clear the way for the re-establishment of democratic unions. As far as possible the army avoided any domination or control of the new unions. Instead, they were encouraged to develop their own leadership and determine their own policies. Elections in which the workers selected their own representatives were held in Sicily and Italy for the first time in twenty years. Collective bargaining was instituted so that labour disputes could be settled by agreement between the parties concerned, with the officials of the labour offices acting as mediators.

Manpower

Canada's Manpower Situation

Comprehensive Review Given by Minister of Labour in House of Commons

THE Minister of Labour, Hon. Humphrey Mitchell, gave an extensive review of Canada's manpower situation in the House of Commons on April 28. The following is a compilation from *Hansard* of the Minister's detailed analysis:

Mr. Chairman, the committee have been given the latest information on the expansion of our armed services and have been brought up to date on the production of the materials and facilities for war.

Man-power is basic to all accomplishments, and my colleagues, I believe, will be the first to agree that the work of the Department of Labour is an integral part of the story of achievement which they have been privileged to tell.

In my opinion the true yardstick of a successful man-power policy is the degree to which the armed forces are mobilized for the job of fighting and the material resources organized for maximum output of munitions, food and all the other things necessary.

At the end of 1943 we had more men and women in our forces than at any previous time in our history. Despite this, production for war was on an unprecedented scale.

It must be realized that as new types of war equipment are required, or as the emphasis of military requirements changes, we must revise our man-power allocation to meet the new needs.

I have before me a table which shows that 5,057,000 or 57 per cent out of a total population of 8.820,000 aged fourteen and over were in the armed forces or at work at December 1, 1943. From the beginning of the war to that date there was a total increase of 1,317,000 or 35 per cent in the number at work or in the armed forces; from January 30 to December 1, 1943, we added 177,000.

Growth in the number of women in employment and in the services has been phenomenal, increasing from 638,000 in August, 1939, to 1,075,000 as of October 1, 1943, a gain of 437,000 in the four years.

The strength of our armed forces has gone up by 759,000 since war began; 124,000 joining the forces in the ten months ended December 1, 1943. The number of workers of both sexes in war industry alone was 1,104,000 at the same date.

We have arrived at our present position by constant adjustment of the selective service machinery capable of putting the most workable plans into effect.

Every effort has been made to bring into our man-power pool the skill and services of all our people. We had, as we know, a breathing space in the early months of the war. We were able to study the problems of man-power control, in which we had little experience on this continent. After the fall of France in the summer of 1940 Canada was looked to as an arsenal of supply in the battle for world freedom. Compulsory calls for military training were introduced. We took stock of our human resources through national registration. We buckled down to the task of augmenting our skilled man-power, notably through the war emergency training programme. Many other measures were adopted to effect a general mobilization of our industrial and man-power assets.

Selective service was introduced through Orders in Council which became effective on March 23, 1942. Under P.C. 2250 permits to enter certain classes of industries and occupations were required. P.C. 2251 stabilized employment in agriculture. These two Orders in Council were the basis of operation for two months.

P.C. 5038, passed in June 1942, ordered every person, male or female, regardless of age, to obtain a permit for any employment. There were a few minor exceptions to this broad rule.

In August, 1942, P.C. 7595 replaced P.C. 5038. Under this order:

Permits to seek and enter employment were required;

Employment could be terminated only on service of notice of separation;

Employers had to report vacancies;

A basis for a labour priority schedule was established.

Advertising for help was controlled. Compulsory direction of unemployed persons to employment came into effect.

Provisions were made for reinstatement in employment and supplementary allowances.

These selective service regulations continued in force until January 19, 1943, when the present order in council P.C. 246 took effect. This order consolidated all the selective service regulations relating to civilians, including those dealing with technical personnel and labour exit permits. Major developments in the regulations since then have been in the way of compulsory transfers of civilians.

Selective service also was given authority to direct to any suitable employment persons who had been found unfit for service in the armed forces.

In September last, it was decided that no person employed in a "designated establishment" could leave his employment without the permission in writing of a selective service officer. Correspondingly, the employer could not discharge an employee in such an establishment without permission. "Designated establishment" means an establishment which has been given an "A" or "B" labour priority rating.

Our major problem on the civilian side is to maintain an adequate working force in the high priority industries. The system of separation notices has done much to maintain man-power in war production.

The rules are not inflexible, being administered in a practical sense as a control rather than a prohibition. Where good reason for termination of employment either by employee or employer is shown, the selective service officer gives approval and an attempt is then made to place the worker in other high priority employment. In order that the local office may do the job assigned to it, it must have a complete picture of both supply and demand. It must have available information regarding all existing vacancies and knowledge of the men and women available to fill those vacancies. It then is in a position to make use of the labour priority schedule and continue the movement upward of available employees into the higher labour priority brackets.

During 1943 some 1,944,026 placements were made by our employment service offices.

The national selective service advisory board was reconstituted in March, 1943. No significant regulations concerning man-power are issued without approval of this board. It is one of the major instruments for consultation and collaboration between government, employers, workers and farmers.

Next is the national selective service administration board, over which the director of national selective service presides. This board is composed of the associate directors of national selective service and carries the burden of the day-to-day administrative problems. As members of the administration board are also members of the advisory board, coordination of advisory and administrative functions is as complete as possible.

Decentralization has been provided for by the appointment of regional directors and regional national selective service advisory boards in Quebec, Ontario, the prairies and the Pacific. An advisory board for the maritimes will be constituted in due course.

These regional boards are under the chairmanship of the respective regional directors and include the chairmen of the mobilization board and the regional employment committee, the regional employment superintendent, one or more representatives of labour, representatives of the wartime prices and trade board and the Department of Munitions and Supply.

These boards act in an advisory capacity to the regional director in the same way that the national board assists the director of national selective service. To these boards I am adding representatives of the departments of National Defence and Agriculture.

It was extremely fortunate that unemployment insurance was inaugurated in 1940 as this led to the creation of a national employment service. Thus we laid a solid foundation for our war-time man-power machinery. Up to 1940 there was no wholly dominion employment service. Now there are 242 offices in five regions across Canada, staffed by some 5,200 persons.

It is in the nature of things that complaints are given publicity, whereas the praises of our employment service are seldom heard. An incident comes to my mind which suggests the other side of the picture. It concerns the work of the Edmonton office. The American authorities called the manager of the local office one Saturday morning requesting 250 men for a construction camp to leave for Waterways on the following Monday. When the manager inquired what they wanted in the way of men, the reply was to the effect, "You know what we want—superintendent, foremen, carpenters, labourers, cooks, handymen—everything that goes to make up a camp, and we want them on the train Monday morning." When asked whom the men would be working for the reply was, "We don't know yet—you will have to coin a name for the contractor because we haven't let the contract yet or formed any company to handle it." To cut a long story short, the

local manager got busy with two radios, sending out calls at intervals on Saturday afternoon and evening. He opened the office at 6 a.m. on Sunday, kept it open all day, opened again at 6 a.m. on Monday, arranged for a special train and at 11 a.m. on that morning the train pulled out for Waterways with 250 men on board.

When I addressed the committee in June last only two compulsory labour transfer orders had been issued and our experience in the problem of compulsory direction was limited. We have now seven orders which are applicable to every male person who has attained the age of sixteen years and has not attained the age of forty-one years. The orders issued to March 15 have involved an examination of the employment of no fewer than 99,453 individuals who have been personally interviewed. There have been 15,359 transfers. It is worth noting that very few of the 15,000 raised any objection and in the extremely few cases which did arise, forty or so in number, there were adjustments without having to resort to prosecution.

I do not mean to imply, Mr. Chairman, that national selective service regulations in general would be of value if there was not some power of enforcement behind them, but it was recognized that time should be given to allow for public education.

As of August 1, 1943, only a small number of prosecutions had been commenced. It was then decided to take a more serious view of instances of non-compliance and contraventions. A vigorous policy of enforcement has since been carried on.

At the present time, the machinery of the department includes an extended enforcement organization operating in our five regional divisions. From July, 1943, to the end of February of this year, 14,765 cases of reported contraventions were investigated and studied. Apart entirely from the number of actual prosecutions much constructive work is being accomplished in the adjustment of complaints and settlement of disputes.

It will be noted that the number of reported contraventions indicates that a very important work is being done in adjusting and settling disputes in the field, in fact over ninety-five per cent of the cases are settled without prosecution. The general acceptance of these wartime rules and restrictions by employer and employee alike indicates a spirit of cooperation on the part of the great majority of those affected.

Steps have been taken to protect the personal liberty of the individual against what might be felt to be an arbitrary ruling of a national selective service official. Any man who is directed by a selective service officer to leave his employment for higher priority work, or who is directed to remain in his present employment, or any person who is affected by the ruling, order or direction of a selective service officer, has the right of appeal to a court of referees.

These courts were originally established for hearing appeals regarding unemployment insurance benefits. They have an equal number of employer and employee representatives on them, with an impartial chairman, are constituted on a district basis, and are not subject to administrative control. The result is that an appeal is heard by a court whose members are familiar with labour conditions in the district. Here is democracy in action. These courts have heard over 2,500 appeal cases up to the 31st March, 1944. Considering the tremendous volume of work which has fallen upon selective service officers it is of considerable significance that such a small number of their decisions have been appealed. The fact that less than one-third of the total number of appeals heard were allowed, is also strongly indicative of the soundness with which selective service officers have made directions, rulings and orders.

I should like now to deal with the specific branches, particular problems and achievements of the Department of Labour's wartime activities.

* * * *

WOMEN'S DIVISION

I am glad to record here the magnificent part played by the women of Canada in all phases of our war effort. They have come forward voluntarily to accept all kinds of work at a rate and with a spirit that is nothing short of spectacular.

This has released much man-power for the armed forces and for essential industry. As I stated earlier it is estimated that on October 1, 1943, 1,075,000 women were gainfully employed in Canada as compared to 638,000 in August, 1939. In addition, there are over 760,000 women—wives and daughters of farmers—who are supplementing the work of men to maintain the high record of farm production. Each year these women have taken on more and more of the farm work in addition to their work for the home and family, at a great sacrifice of time and energy. It is, of course, in war industry that we have seen the greatest expansion in the employment of women. In June, 1941, there were 40,000 women so employed. By September 30, 1943, that number had increased to 235,000 to keep pace with the heavy and varied de-

mands of war production. This large employment of women in a thousand different industrial plants has created problems of its own in connection with work conditions. The provincial governments, as members know, have jurisdiction over conditions of work for women. Therefore we maintain close cooperation with provincial departments of labour with respect to such matters; and frequent discussions are held with employers concerning adequate welfare service for their employees. As a result many new services and improvements in accommodation have resulted.

Last year it became necessary to make an appeal to women who ordinarily would not be seeking employment. It was recognized that many such women might be able to accept only part-time employment, either part of each day or part of a week. So that employers had to be encouraged to make greater use of the part-time worker. As shortages developed in one area after another the Local Council of Women or the Women's Institute sponsored a campaign appealing to women to take full-time or part-time employment.

No such appeal was made in any area where it was not urgently required. Acute situations developed in Hamilton, Peterborough, Ottawa, Toronto, Halifax, Edmonton, St. Catharines, Welland, and in every instance the required objective was reached. These appeals not only secured many additional full-time workers; they also established the part-time worker as an integral and valuable part of our wartime man-power resources. As a result I am glad to be able to say that in all industrial centres the labour situation was very materially improved.

The entry, within two years, of nearly 200,000 women into war industry alone has had the effect, of course, of creating a shortage of help in other industries and services in which women workers have always predominated. One of these is hospital service. Our hospitals are crowded to their limit and more nurses are being employed than ever before. The non-professional personnel in hospitals has been augmented; and the number of student nurses in training is the largest in our history. Hotels and restaurants have absorbed thousands of new women workers; and we have been hard pressed to supply the labour requirements of laundries and dry cleaning establishments to enable them to take care of the needs of the armed forces as well as of their regular customers.

During the past year, the women's divisions of the employment offices have been augmented to deal more adequately with the great numbers of women passing through them. By means of intensive training, the quality of the work of our officials is steadily improving; and we are, I believe, now giving better service both to the woman applicant and the employer.

One of our problems has been the care of children during the days when their mothers are at work. Under the terms of agreements with the provinces, day nurseries have been expanded and increased in number to twenty-six. In Ontario the day care of school children outside of school hours has been developed to a considerable degree and units now approved are capable of providing for 1,700 children.

FARM LABOUR

Last year I pointed out that with fewer people on the farms during each successive year of the war, farmers had pushed the production of vitally needed food to higher levels. This record of our farm people was repeated in 1943. This meant working longer and harder each day. Results have been clearly revealed this past winter in the huge deliveries of live stock and live stock products to markets and processing houses.

Dr. G. S. H. Barton, Deputy Minister of Agriculture, recently stated:

> In the course of the last four years Canada has increased the agricultural output by 50 per cent in spite of a reduction of 23 per cent in man-power.

He also gave the following figures with regard to quantities of agricultural products shipped to Great Britain during 1943.

Bacon	588,000,000 lbs.
Cheese	129,741,000 lbs.
Eggs (powdered)	34,743,510 lbs.

In the first three months of 1944 beef equivalent to

Head of cattle	70,000

This exertion by the farm people themselves when under normal circumstances they work so hard, has been the major factor in overcoming the labour shortage. Because of a full recognition of this fact, we derive much satisfaction in that the plans which were put into effect in 1943 provided additional help for them. The results of our efforts to meet the farm man-power shortage were due to the co-operation of every provincial government in Canada working in partnership with the Department of Labour through dominion-provincial farm labour agreements.

The provincial Departments of Agriculture field staffs with the local farm committees organized by them have been indispensable to the successful execution of the plans of our employment service. These agreements provide for the sharing of expenses on a dollar for dollar basis for active programs in each province to recruit, transport and place help

on the farms. Each of these programs is directed by an officer who is a joint employee of both governments.

Early in December last, we called these men and other senior officials to Ottawa for a conference on farm labour. Our purpose was to consider what progress had been made in 1943 and what improvements we could make in respect to the plans for 1944. It was clearly evident at this conference that the working arrangements with the Department of Labour were harmonious and satisfactory.

Hon. members from one province will be familiar with the term "emergency farm labour service," in other provinces it is "farm help service," or "farm service force", or "farm labour bureau." These organizations, Mr. Chairman, represent our farm labour agreements in action.

In British Columbia last year more than 11,000 people registered with the dominion-provincial emergency farm labour service to help on farms. On the prairies the dominion-provincial farm labour organizations transferred hundreds of workers from point to point within each province and organized and distributed harvest help.

In Ontario the farm service force, operating under the dominion-provincial agreement reports nearly 100,000 placements of workers on farms in 1943.

The farm labour bureau was formed in Quebec under the agreement for the purpose of tapping every possible source of help and placing this help on farms.

In the maritime provinces the dominion-provincial farm labour organization helped to recruit labour for dairy and live stock farms, organized local sources of help for haying, potato and fruit-picking and distributed this help to those farms where it was most needed.

One of the most valuable features of the farm labour programme has been the financial assistance in transporting workers to their places of employment on farms. The Department of Labour paid the costs of interprovincial movement of labour and shared equally with each province the cost of transporting labour within the province. This plan greatly increased the mobility of farm labour.

During the 1943 season three large-scale excursions of farm workers were organized. Women and girls were recruited in Alberta and transported at public expense for berry picking in the Fraser valley in British Columbia. Early in July over 700 Saskatchewan farmers were brought down to Ontario to help with haying and early harvest. These men remained on Ontario farms until late in August when they returned to Saskatchewan for their own grain harvest. This excursion should be noted by our historians. We have been accustomed to organizing harvest excursions to the prairies, but we have no knowledge of their ever before having been put in reverse. This project was an outstanding success and proved a most valuable source of outside help to the hard-pressed farmers in Ontario. The Ontario farmers were grateful. They expressed their thanks to the people of the west by acting, not merely by words.

When harvest help was badly needed on the prairies in September, more than 5,000 farmers and farm workers from Ontario offered their services. Over 3,700 actually made the trip. More could have gone, but when our farm labour officials on the prairies called "Halt, enough", no more applicants were sent out. We have been told that never before has such a good class of man been sent out on a harvest excursion.

We received splendid assistance during the past season from members of the three armed forces. In September and October more than 15,000 men from the army, the air force and the navy helped to take off the crops in all parts of the country. Men from the army, which made up about 11,000 of this number, were supplied in two ways. The majority were granted compassionate leave to return to their own farms or those of immediate relatives. The second source of help from the army was from men supplied through the farm duty plan. Under this plan, which to my knowledge was developed for the first time, men were detailed under military discipline for work on farms. About 2,500 men were made available and worked in all parts of Canada, the majority being employed by farmers in the prairie and maritime provinces.

Last session my colleague the Minister of National Defence for Air stated rather bluntly that he "was not training an air force to go farming". I am glad to say that the natural generosity of his disposition could not for long be suppressed, because he did authorize the issuing of an order providing up to six weeks harvest leave for certain personnel in the air force. A total of 4,326 men were granted leave under this order. All provinces benefited.

Through a special arrangement made by provincial agricultural officials and the federal departments concerned, more than 600 sailors from Deep Brook, Nova Scotia, assisted with apple-picking in the Annapolis valley. This proved a most useful source of help during a critical emergency and the work done by the sailors was greatly appreciated by the apple growers in the valley.

There has been a great deal of discussion about men called from farms to serve in the army. Later on I will table an analysis of postponements in effect at the end of January, 1944, by mobilization divisions and by industries.

Out of a total of 246,133 for all industries, 142,400, or about 58 per cent, represent the number of farm workers on postponement. This large number of postponements given to farm workers, I am sure hon. members will agree, is tangible proof of the favourable treatment given to agriculture by the mobilization boards.

That our efforts respecting postponements of military service for essential farm workers are appreciated is illustrated in the following unanimous resolution which has recently come to hand:

The Ontario Concentrated Milk Producers' Association wish to state their appreciation of the efforts of the federal selective service in making it possible for experienced farm help to obtain deferment privileges and thus remain on the farms.

The farm people, even with their reduced members, have not remained satisfied with having achieved the greatest food production in our history. Last fall, and early winter, thousands of farmers, farmers' sons, and other farm workers, responded to our appeal for help and moved to the woods, mines, food processing plants, and other essential industries. We appealed only to those who could be spared from their farms during the winter and they were given other work on the understanding they would be released in the spring to return to their farms. This principle was emphasized in extensive publicity conducted as part of the recruiting campaign.

Assistance given by these farmers greatly eased the labour shortage in many industries. Cooperation of provincial field men and local committees made possible a more thorough checking to see that farmers needed on their farms during the winter remained there; also through this assistance we have a much more complete record of those entering other industries.

The return of these men to their farms is now practically completed. Because of a late spring season in certain areas some permits were extended, after consultation with provincial departments concerned, until May 1. The vast majority of farm workers have returned to the farms of their own accord. Only in a very few cases was it necessary to follow up on the cancellation of permits.

We shall avail ourselves of every possible source of help for farm work during the coming season. Extensive plans are under discussion with the Department of National Defence. Already special spring farm-leave orders, authorized by the Department of National Defence (army and air), are resulting in a large number of men being granted temporary leave to assist with seeding operations.

Selective service officers stationed at military reception centres now interview all men rejected or discharged from the armed services, with a view to referring suitable men to farms. In industrial plants where lay-offs are occurring, those experienced in agriculture are as a matter of policy laid off second only to those suitable for military service.

During the past few weeks officials of the Department of Labour have visited all the provinces to discuss the renewal of dominion-provincial farm labour agreements. Every province is anxious to continue agreements and confidence seems high in the provinces that this year's problems will be handled effectively. We feel that the successful experience of 1943 which was really our pioneer year in an all-Canada programme to meet the farm labour problem will enable us to do a better job in 1944.

LUMBERING AND LOGGING EMPLOYMENT

For some time, it will be recalled, there has been a pronounced labour shortage in the lumbering and logging industry. The situation has been met in various ways.

As usual, the industry, east of the Rockies, drew the major portion of its labour in the peak winter season from agricultural workers. But west of the Rockies, where a more highly skilled type of labour is called for, most of the woods labour had to be secured from other sources. Labour shortages were met by men transferred from agriculture and from other industries; by men granted special leave from the army; by postponement of military service; by the employment of enemy aliens, and prisoners of war and conscientious objectors.

Transfers from less essential industries have been effected both on a voluntary basis and as a result of compulsory employment transfer orders.

To March 15, 1944, 869 workers were transferred to lumbering and logging by such orders.

Over a year ago the Department of National Defence arranged to grant three months' leave of absence to army personnel having previous logging and lumbering experience in British Columbia, to return to such employment in that province. The duration of the leave was subsequently extended to six months and leave is now granted for this period and is

subject to renewal for further six months' periods at the discretion of military authorities.

Interned aliens have been used on reforestation and fire control work in Ontario and British Columbia; Japanese have been engaged on actual logging and lumbering operations in Ontario and in the interior of British Columbia; services of prisoners of war have been utilized in labour camps. They have been used extensively in Ontario, Quebec, and in the west, in logging and lumbering operations and also in fuel wood cutting.

Conscientious objectors have also been directed into logging and lumbering operations.

Through the steps mentioned and as the result of an extensive campaign undertaken by national selective service in conjunction with the provincial government officials and the industry a greater number of men were employed in woods operations since the end of November than a year ago.

Because of the many small operators and the fact that farm workers may enter employment in the woods for less than sixty days without a permit, it is difficult to obtain an exact record of the total number of men employed in the industry at any given time. However, we know from the records of the local employment and selective service offices that, during the period from October to December 1943, there were over 7,000 more placements than last year. During the first five weeks of this year, there have been some 6,000 more placements than in the corresponding period of 1943.

The reports we have received from the pulpwood committee of the pulp and paper industry of Canada further substantiate the conclusion that there are more workers engaged in woods this year than last. East of the Rockies there were nearly 9,000 more men employed on February 26 of this year than at the same time last year.

In the fall of 1943 the timber control estimated that lumber production for the year 1944 would be about 5 per cent less than in 1943. In view of war demands, this was a serious situation. It now appears that Canadian lumber production this year will equal the 4,630,000,000 feet produced in 1943. A similar improvement has taken place in respect to pulpwood production. Whereas a decrease in production as compared with the previous cutting season had been anticipated, this winter's production will record an increase of 3 per cent to 4 per cent.

In the fuel wood branch of woods operations, the situation has been satisfactory. Sufficient fuel wood has been cut to satisfy the needs. The mild weather was an easing factor.

SHIPLOADING OPERATIONS—HALIFAX

In the last year we have met the increasing demands made at Halifax on our shiploading facilities. It had become increasingly apparent that the turn-round period of ships would have to be shortened to keep pace with the rising tempo of ship movements. It was realized that a speed-up in loading would in effect amount to an increase in the actual number of ships available. Following an investigation made in 1942 a wartime reorganization plan was put into effect in May of that year, and has been adjusted and improved as occasion necessitated. A controller of loading operations was appointed vested with complete authority to coordinate the activities of all agencies directly or indirectly engaged in shiploading.

A new method of hiring longshoremen, through a central despatching agency, was put into effect regularizing the method of hiring and providing a permanent gang system.

But that could not of itself overcome a constant over-all shortage of men caused by enlistments and the drift to war industries. Therefore selective service regulations were amended to provide for the return to the docks of ex-longshoremen, for the "freezing" of the existing personnel, and for making other men available by specific directed transfer to longshore work.

A longshoremen's reserve pool was then set up, each man required to report to any longshore work to which he was dispatched, or to any other type of work in Halifax to which he might be directed, or to longshore work in any other port in Nova Scotia or New Brunswick. Provision was made for all longshoremen registered at the dispatching agency and in the reserve pool to receive a guaranteed minimum weekly wage based on a forty-eight hour working week at daytime rates.

By arrangement with the Minister of Transport, bunkhouse accommodation was secured for five hundred men who were recruited by national selective service and a staff engaged under the direction of a pool superintendent.

Night work has hitherto been very unpopular; but by setting up a system of regular gangs and their rotation as between day and night work, an increase in night work has been obtained. This will increase with the opening shortly of a Government-operated canteen at the north-end terminals provided particularly for night workers.

The supply of labour has been stabilized; there is a considerable improvement in the system of hiring; and the previous wasteful turnover of labour has been reduced.

By a recent arrangement with the Department of National Defence, port companies are to be used at peak-load periods when civilian labour supply is insufficient.

The situation is under constant review, of course, as conditions are not static.

PRISONERS OF WAR AND JAPANESE

A special problem handled by the department is that of utilizing the labour of prisoners of war, on essential work projects outside internment camps. This has been chiefly in fuel wood, pulpwood, and lumbering operations, and to a lesser extent, in agriculture. Other projects using prisoners of war labour include a tannery and a company cutting peat fuel.

There were approximately 4,117 prisoners of war working on such projects outside internment camps at March 9. The prisoners employed in woods operations are, for the most part, working in groups of forty to sixty men in camps of private operators. Guards on the projects have been chiefly provided by the veterans' guard.

A number of prisoners of the civilian type such as German merchant seamen have been individually placed with farmers. It is the intention to extend the use of prisoners in agricultural work during the course of the current year so far as reasonably possible, consistent with security requirements.

Employers have, in general, been well satisfied with the work of the prisoners, and in many instances have later asked for an increased number.

The major administrative problem involved in putting prisoners to work is that of security. Where the percentage of guards in relation to prisoners is high, there is nothing gained in the productive use of man-power. Some risks as to escapes have therefore to be accepted in putting prisoners to work. Escapes have, however, been few in number and in every instance, the prisoners have been picked up within a short time.

The policy followed by the department, in close cooperation with the Department of National Defence, is one of careful selection of prisoners coupled with the use of sufficient guards to ensure discipline and control and to maintain a guard patrol on the project.

The hon. member for York West (Mr. Adamson) inquired some time ago as to the base rates paid to prisoners of war and the regulations under the Geneva convention which cover this.

Prisoners of war are paid under "Convention relative to the treatment of prisoners of war," which was concluded at Geneva on July 27, 1929.

After reference to the imperial prisoners of war committee the rates paid to prisoners of war in Canada were fixed by order in council in accordance with chapter 5, article 34, of this convention.

The Canadian rate is 50 cents per day; the United States rate is 80 cents per day; the British rate is one shilling per day.

The British Columbia security commission, which handled evacuation of 21,000 Japanese nationals and Japanese-Canadians in 1941, was dissolved early in 1943, and the powers of the commission reverted to the Minister of Labour acting through a commissioner stationed on the ground.

The Labour Department's objective for 1943 was to place the employable men and women in useful work where they were most needed in Canada, to provide adequate welfare for the unemployables, and to provide at least a minimum Canadian education for the children.

Special emphasis has been placed on reallocation of Japanese, both singly and in family groups, to areas where essential industries have urgent labour shortages.

By the end of 1943, there were 4,000 Japanese in self-supporting employment in British Columbia (including women and children), 4,700 on the prairies, and 3,000 in eastern Canada, these totals in each case including a few hundred who were there prior to Pearl Harbor. Thus approximately one-half of the Japanese in Canada were supporting themselves at useful labour in various parts of Canada at the end of 1943.

During 1943, there were approximately 4,700 Japanese working on sugar beets in Alberta, Manitoba and Ontario, an increase of 1,000 over the preceding year.

About 600 Japanese have been employed in lumber camps in British Columbia and approximately the same number in woods operations in Alberta, Manitoba and Ontario. The latter were transferred from farms and will return to farming this spring.

Japanese in the settlements of British Columbia have produced 35,000 cords of fuel wood, of which 20,000 cords have been shipped to Vancouver, also 1,700,000 board feet of lumber and a variety of other wood products.

There also are at least 2,000 more Japanese men and women scattered from British Columbia to Quebec—as railway section hands, fish and vegetable and fruit canners, domestics, and cooks, factory and office workers, dry cleaners, tanners, and so on.

With few exceptions, the Japanese in Canada, especially the Japanese Canadians, who are seventy-five per cent of the total number, are working industriously and causing no trouble.

The Department of Labour plans in 1944 to apply selective service direction more fully

to the employable Japanese not yet in essential industry, thereby also accelerating the reallocation programme.

COAL MINING

The situation of the coal mining industry was declared to be a national emergency in May, 1943, and last June the steps taken to that time to solve this situation were outlined to you. Since then our efforts have been continuous.

With the cooperation of the Department of National Defence, employment and national selective service officers have made every effort to locate soliders in the army in Canada with coal mining experience, who could be spared from army duties. As a result, 2144 were on leave from the army to work in the coal mines as of March 15, 1944.

Last May, order in council P.C. 4092 was passed, and directed that men with coal-mining experience then engaged in other industry, and who were physically fit, should be returned to the mines. They were exempted from military service until February 1, 1944, and, in fact, prohibited from enlisting voluntarily. P.C. 121 of January 10, 1944, has extended the effect of this order until August 1, 1944.

Up to March 15, 2,276 men were referred to the mines under these orders. A further 485 workers have been referred to coal mines under other orders. (P.C. 4861 and 6077)

There remains a demand for highly skilled miners to work at the face of the mines, particularly in the maritimes, but until such time as they are obtained the need for unskilled workers has been met.

After long negotiations training classes to provide skilled workers at the coal face will, it is anticipated, be started in the near future in the maritimes under the war emergency training programme. It is hoped this programme will develop and that it will provide a number of the required certificated miners.

GOLD MINING

During 1943, an acute man-power situation developed in the gold mining industry. This was due to the fact that in 1942 it was necessary to curtail gold mining in order to ensure man-power for the mining and production of more essential metals and minerals, nickel particularly.

In 1941, the average number of employees in the gold mining industry was 33,348. In 1942 the average dropped to 26,501. In 1943 there was a further drop to 18,320. At the end of 1943 there were only about 16,000 men employed in the gold mining industry, a drop of 52 per cent from the 1941 average.

In September, 1943, the gold mining industry claimed that this labour loss had caused operations to fall considerably below the economic point, and that essential maintenance work was being neglected. It was represented to the Department of Labour that if the situation continued, some of the mines would be forced to close down entirely, and thus jeopardize future operations.

In October, 1943, a survey of the gold mines was made by selective service to determine the minimum number of men needed to keep each mine in operation. On the basis of the report, I approved a temporary change in the labour priority of gold mines to permit the hiring of 800 men not immediately required for high priority jobs.

MISCELLANEOUS INDUSTRIES

In certain industries and occupations, notably flour mills, meat-packing and cold storage plants, replacement of trained and able-bodied male help by female workers and older men had proceeded to such an extent that it had the effect of creating a demand for more able-bodied male workers.

At August 28, 1943, there were 12,276 male and female workers on the payrolls of Canadian packing plants. There existed an almost immediate demand for another 4,000 male employees. At December 4, the payrolls had increased to 16,300. The employment service had found 4,024 more workers for this industry.

The Parliamentary Assistant to the Minister of Finance on February 29, 1944, stated:

> During the first 8 weeks of 1944 the inspected packing plants in Canada have slaughtered 780,000 more hogs, 50,000 more cattle, 10,000 more calves and 30,000 more sheep and lambs than in the corresponding weeks of 1943. These figures represent an increase of 80 per cent in hogs, 50 per cent in cattle, 20 per cent in calves and 35 per cent in sheep and lambs.

We have supplied workers for flour and feed mills to enable increased shipments of flour overseas and to meet a shortage of feed for live stock in Canada.

During the past eighteen months the staffs of coal merchants, especially in large centres, became depleted to a point where drastic action became necessary to assure coal deliveries to householders. An order was issued temporarily halting calls to military service, and a special effort made to provide more men. By the end of November the situation had cleared.

The primary textile industry has received special attention. An officer was loaned to the industry to survey the mills and to direct the recruiting campaign for labour. Enough workers were found to assure the output of

supplies directly required for military needs, but the civilian supply has been necessarily curtailed. Production for civilian needs is now being stepped up and plans adopted to provide for the current year.

To meet the labour shortage in tanneries, special campaigns were conducted and a supply of men made available from prisoner-of-war camps.

Agricultural labour available for release from the farms following the harvest was also transferred to essential civilian industries, and this relieved a serious shortage. These men are being returned to agriculture this spring, thereby creating a demand for labour to fill the vacancies.

Many civilian industries not classed as essential, but nevertheless of primary importance, have maintained production in many instances by the use of female labour working part time.

WAR INDUSTRIES: CONSTRUCTION AND TRANSPORTATION, BASE METALS

My colleague, the Minister of Munitions and Supply has given you figures on shipbuilding, aircraft building and products of munition plants.

Our war production is delivered not only to Canadian forces at home and abroad but is going to Britain, the United States, India, Africa, China, Russia, Australia, New Zealand and the south Pacific.

Canada ranks fourth amongst the united nations as a producer of munitions with a weekly output of more than $55 million worth of munitions.

By the end of 1943 Canada had produced more than 10,000 planes; 600,000 motor vehicles; 750 escort, cargo and patrol ships; vast quantities of chemicals and explosives, and millions of dollars worth of signals equipment and instruments. All of this has meant supplying and using to the best possible advantage, man and woman power.

To attain this objective it was necessary to develop a close liaison between the Departments of Labour and Munitions and Supply. As changes in the production programme were made, shifts in man-power had to be made.

It is true that we never attained a position where every vacancy was filled. Nevertheless, it can be said that the various programmes were not seriously impeded by shortage of man-power. In fact the production figures prove this to be correct. Since September, 1943, the demands have lessened somewhat, although there are shortages for strong labourers who can do heavy manual work and also for skilled mechanics.

The requirements of the base metal mining industry have been very heavy and were particularly difficult to fill in view of the fact that the men required were necessarily of good physique and most of this type are in the armed forces. This necessitated the constant combing of other industries for the essential men required by the mines. Special campaigns of various kinds were inaugurated to keep the working forces of the mines at the necessary levels. Particular attention was given to the needs of the nickel mines.

At the close of the 1943 season large numbers of farm labourers were supplied to the International Nickel Company, Consolidated Mining and Smelting Company, the Hudson Bay Mining and Smelting Company, and Sherritt Gordon Mines Limited, and to other base metal mines.

The development of the iron deposits at Steep Rock lake in Ontario was pushed forward during the year. This project necessitated draining lakes, driving large tunnels through rock for considerable distances, making new railway facilities and developing loading machinery. A river has been diverted that required at the peak of this project a labour force of one thousand men.

It should be appreciated that this undertaking involving the employment of thousands of workers has been carried on as a special task in the midst of war, and that all of this labour has been supplied through a system of labour controls and priorities. Generally production was maintained at high levels, this being due largely to the excellent cooperation between management and workers.

Shortages of men in the construction industry were partially met by transfer of thousands of workers to the more important construction projects. Demands were mainly for strong unskilled men.

Many large projects were completed on or near to their scheduled dates, as for example, the synthetic rubber plant at Sarnia.

The labour needs of rail, water and road transportation systems also were heavy during the peak months of summer and early fall. We did our best to meet them. The Department of National Defence cooperated and lent soldiers for urgent track maintenance. Some Italian prisoners of war were also used.

Special drives were made to obtain lake seamen during their off-season, and by arrangements made that these men returned for the reopening of navigation.

There is still a shortage of workers on combat aircraft, ship and aircraft repair, and for highly skilled workers in other lines. There are also insistent calls for both common labour and partially skilled labour.

LAY-OFFS

The matter of lay-offs in war industries has come to the fore in recent months. As the war

progresses, changes in production programmes and the curtailment in production of certain supplies necessarily involve cancellation of some contracts and changes in others.

Early in November last it was announced that such changes would make it necessary to lay off a considerable number of workers in various plants. The employment service studied the situation. Arrangements were rapidly made to have these lay-offs effected in an orderly manner with a minimum of time loss in transferring workers to other jobs.

As a general policy it was decided that all those men who were on military deferment should be called for the army unless they were considered to be indispensable to industry.

Further it was decided that the order in which workers were to be laid off should be:

(1) those with previous agricultural experience, particularly dairy farming and stock-raising;

(2) workers who were needed in other high priority industries in the same vicinity;

(3) workers required by outside high priority industries, and who could be moved;

(4) young workers without family obligations and

(5) married women if their husbands were supporting them.

Up to the present, lay-offs have been considerably less than anticipated. This is largely due to new contracts being placed. I have in mind a certain lay-off which was being carried out at a steel plant. Before the lay-off had been completed a new order came for overseas account which required the reemployment of more men so that overnight the "lay-off" problem changed to one of finding additional staff.

WARTIME BUREAU OF TECHNICAL PERSONNEL

There has continued to be a short supply of technically trained personnel and the work of the wartime bureau of technical personnel, which was set up in February, 1941, has thus remained of primary importance.

A large proportion of the requirements of the armed services and war and essential industries have in fact been met. This has been accomplished very largely through the efforts of the bureau.

The bureau, acting in an advisory capacity, has succeeded in many instances in assisting those in need of the services of engineers and scientists and also in advising individual technical personnel how the national interest might best be served.

By the use of the employment permit system the bureau contributes largely in directing technical personnel to high priority industries and in securing a high degree of stability of employment.

Working in close cooperation with the universities, the bureau has through the administration of the university science students regulations assisted materially in ensuring that university students in science faculties make the best use of their training period.

Upon graduation, the bureau has dealt effectively with the question of their allocation as between the armed forces and industry and as between industries.

WAR EMERGENCY TRAINING (CANADIAN VOCATIONAL TRAINING)

The war emergency training programme has been in operation since April, 1940.

Up to the end of March, 1944, approximately 12,300,000 man-days training have been given at a cost of about $20,000,000.

The gross enrollment of full-time and part-time trainees was 333,458. Of these 134,534 were full-time preemployment industrial trainees, 102,357 of whom are known to have been placed in employment prior to March 31, 1944.

Of all full-time industrial trainees, thirty-one per cent have been women, but during the present fiscal year the percentage of women has been raised to forty-six per cent.

As the demand of war industry and the armed forces for tradesmen diminishes, steps are being taken to adapt the training centres to provide rehabilitation training along vocational lines for men and women discharged from the forces. The Department of Pensions and National Health has asked the Department of Labour to assume responsibility for training of this type.

It is anticipated that a large percentage of rehabilitation training will be given in industrial or commercial establishments in those occupations for which training cannot be given in any preemployment centre.

An order in council was passed on January 21, 1944, making provision for the first time for dominion financial assistance to approved apprenticeship plans to be carried on by the provincial governments under apprenticeship acts. This is to provide for long term training in apprenticeships lasting at least two years and should prove of valuable assistance in helping to reestablish discharged members of the forces.

SPECIAL PLACEMENTS

Many men and women are working today at jobs which at one time they might have thought themselves physically incapable of

of Canada; J. A. Parent, General Organizer of the Canadian and Catholic Confederation of Labour; Willis George, representative of the Canadian Manufacturers' Association; J. Clark Reilly, Secretary-Manager of the Canadian Construction Association; Colonel J. A. W. LaBelle, representing employers; and D. B. Chant, Secretary-Engineer of the Ontario Pulp and Paper Manufacturers' Safety Association.

MOBILIZATION FOR ARMED FORCES

Under our man-power policy, it is our duty to provide the required number of men for the army, while at the same time supplying the necessary men and women for our war industries, farms, base metal mines, lumber camps, railways, inland and sea-going shipping, and in other spheres.

Additional men have been designated for military service since last year. These were men who were born in the year 1925, but they were not callable until they had reached the age of 18 years six months.

Men who were married on the 15th July, 1940 and were born in any of the years 1913-1916, inclusive, also are now callable.

In order to summarize the situation, the following are the age groups subject to military call-up:

(a) every man born in the years 1913-1925, inclusive, with the proviso that men born in the year 1925 are not callable until they reach the age of 18 years six months;

(b) every man born in the years 1902-1912, inclusive, who, at July 15, 1940 was

(i) a widower without child or children; or

(ii) was a judicially separated man, with or without child or children; or

(iii) was an unmarried man; or

(iv) was a divorcee, with or without child or children; or

(v) who, since July 15, 1940, became divorced, whether or not he has a child or children; or

(vi) who, since July 15, 1940, has been judicially separated, whether or not he has a child or children; or

(vii) who, since July 15, 1940, became a widower without child or children.

However, we are not calling any man who has passed his thirty-eighth birthday as at present he is not acceptable for enrolment in the army.

We are still experiencing difficulty in locating men to whom call-up notices are sent but not complied with. Arrangements have been made for locating these men through various tracing agencies, provincial police and Royal Canadian Mounted Police. While each month sees a new group of delinquents, owing to call-ups being constantly forwarded, nevertheless we are steadily catching up with the backlog.

When a mobilization order which has been issued by the registrar is returned by the post office authorities marked "undelivered", or when a man does not comply with the order, the case is turned over to the Hooper-Holmes Bureau or to the Associated Credit Bureaus.

If he cannot be traced by them within a reasonable time, the case is then turned over to the R.C.M.P. However, the credit organizations continue their work and if ultimately successful, notification is immediately sent to the R.C.M.P.

A fee of $2.50 is paid to the tracing organizations, but not to the R.C.M.P., for each case in which they successfully locate the man. No moneys are paid if they are unsuccessful.

Checking of records of enlistments in the armed forces with our records is exceedingly difficult in some instances. The date of birth is used as final evidence in identifying men. Owing to the zeal of our young men to enlist, many state their date of birth as prior to what it actually was. Older men do the reverse. We saw the same thing happen during the last war. It also is surprising the number who are confused regarding their birth date and who give varying dates. Conflicting dates necessitate a tremendous amount of painstaking study and search when there are many men of exactly the same given and same surnames. As an instance, in one of our offices there are seventy-eight men of exactly the same surnames and same given names. Birth dates are the final check as addresses have been changed so frequently since national registration.

Everyone will agree that in a country the size of Canada, it is exceedingly difficult to locate every missing man. Many men join the forces of the United States—and of course that works the other way also; many men from the United States have joined the Canadian forces—and the merchant marine without notifying our offices. This adds to the difficulty.

Some time ago we arranged for a series of raids of public gathering places throughout the country whereby R.C.M.P., assisted by the local police, checked on the men present to see if they had complied with the requirements of the mobolization regulations. Here are some of the facts about these raids as at March 31, 1944:—

Number of places visited, 3,775.
Persons checked, 63,506.
Persons charged under mobilization regulations, 373, or less than one per cent.
Number charged under national registration regulations, 271.
Number of deserters apprehended, 145.
Number of persons found not gainfully employed and referred for employment to national selective service, 1,008.

The R.C.M.P. and civilian police authorities are to be commended on the manner in which they have applied themselves in apprehending delinquents. Many stories could be told by police authorities of long, arduous trips that were made under adverse conditions by snowmobile and dog sleighs in this work.

The regulations were recently amended whereby all employers in Canada were required to make sure that their employees in the designated age classes were in possession of some document to show that they were in good standing under mobilization regulations. Literature explaining the reasons for this step was sent to all employers on record.

The object of this action was to bring to notice the case of any man who had been overlooked or who had not complied with mobilization orders. It was carefully explained to employers that they should only report cases in which there was doubt. Employers were given a period of two months to May 1 in which to undertake this check.

The number of men on whom reports have been made to April 15, 1944 was 3,896. Of these 2,334 were in good standing, 411 were not in good standing, and 1,151 have still to be reviewed owing to men not having notified change of address so that the file is still in the division from which the man removed.

Any man engaged in agriculture, on whom a report is rendered, is granted postponement, provided investigation proves this.

With regard to university students, recently we set up a university advisory board comprised of the heads of universities. The board convened in January and deliberated on the question of what course would be essential to the prosecution of the war and in the national interest. As a result, recommendations have been put into effect whereby students in selected courses would be given postponement in order that they might complete their course to make their contribution to our war effort. When a student fails to reach the required standard his postponement order is cancelled and if medically fit he is enrolled in the army. With the assistance of the university advisory board we intend to weed out those students who fail to attain the required standard.

Since last July, a reciprocal arrangement has been entered into between the United States and Canadian authorities whereby nationals of either counrty, who are resident for a period of three months in the other country, may be called for military service. They have the privilege of electing to serve in the forces of the country of their residence or of the country of which they are nationals.

Considerable uncertainty still seems to exist regarding the method of call-up. Instructions are issued to the registrar in each division to call as many men as possible to meet the requirements of the army. Even with the utmost effort, it has been increasingly difficult for some time to obtain the number of men required by the Department of National Defence each month. I am saying this to disabuse the minds of any members that in certain divisions where enlistments are high, particular pressure is exercised to increase the number of enrolments. This is not the case. I previously dealt with this subject at greater length on page 4030 of *Hansard* of June 23, 1943.

We are now finding it more difficult to fill the army requisitions. As the war progresses it is evident that we will soon have to rely largely upon those at present deferred and the young men coming of age.

War industry has passed its peak and it is reasonable to assume that many young men whom the demands of an expanding war production required in industry and who were therefore given temporary deferment will become available for the armed services.

The proportion of fit men in the higher age classes is becoming increasingly smaller. This entails a greater effort for smaller returns.

There is another point I would like to mention. Recently my colleague, the Minister of National Defence (army), made the statement in the house that he would require 60,000 men in the year commencing the first of April. In further correspondence with me, he has stressed the absolute necessity of obtaining these men, particularly bearing in mind the requirements of operations which are in prospect. In the last six months, September 1943 to February 1944, there actually have been more than 5,000 men per month who were enlisted and enrolled in the army alone. However, the monthly average has been decreasing, and at times enlistments and enrolments have fallen below the numbers required by the army. For this reason I think it is only fair to state in the house that further postponements in industry generally will have to be curtailed. This policy should not adversely affect industry; for, as I have already stated, its maximum demand has been passed. I mention this in order that all members will realize that the retention of young men of military age and fitness in industry can only be justified under very exceptional circumstances.

Previously when a man received an order—medical examination, he proceeded to a physician of his own choice. In September last this method was changed, in order to have as many examinations as possible conducted at the reception centres by army doctors and

in more remote areas by designated panels of doctors. This was also with the object of lightening the burden on doctors generally and securing more uniform examinations.

Men who reside within a radius of a reception centre, which would enable them normally to proceed from their homes, undergo the examination, and return to their homes within forty-eight hours, are instructed to report to the reception centre. This takes care of sixty per cent of the medical examinations.

A similar practice holds for panels of physicians, namely, that the limitation of forty-eight hours is the guiding factor. Over six hundred doctors undertake such work. There are still men in more isolated areas who report to doctors of their own choice.

Under the call-up system and as provided by P.C. 9041 of November 30, 1943, we are now selecting men as guards for service in penitentiaries.

* * * *

I would like to refer to our industrial mobilization survey plan. In summary, the survey plan provides:—

1. A proper allocation of men as between the needs of the armed services and essential industry.

2. A means of quick withdrawal of men from a specific plant or retention whichever may be most in the national interest.

3. More efficient handling of men in event of a lay-off, allocating those who are medically fit and subject to call to the army—assisting in transferring those whose skill or experience can best serve the national interest to another high priority industry.

4. Acquaints the employment service with the needs of a plant or industry and sets in motion machinery necessary to assist the the employer.

5. Provides an employer with definite knowledge as to the time his employees will be called for military service and allows him time for proper planning.

6. Presents factual evidence as to why any man or group of men are granted postponement of military training in any plant or industry.

7. Gives mobilization boards information helpful in deciding on applications for postponement of military training to individuals or groups in any given plant or industry.

8. Brings to the attention of the divisional registrars those men who may be delinquent or who have not notified their registrar of any change of address and for whom they are looking.

9. Indicates to employment service any surplus labour.

10. It has the approval and cooperation of both management and labour.

CONSCIENTIOUS OBJECTORS

Up to March 31, 1944, mobilization boards had given deferments to 8,932 conscientious objectors. Subsequently, 245 offered their services to the armed forces and were accepted as combatant soldiers or air force personnel. One hundred and twenty-two others have enlisted as non-combatant soldiers in the medical and dental corps.

The great majority of conscientious objectors have been quite willing to undertake alternative service work as directed. As at March 31, 1944, some 3,188 have been placed in agriculture under alternative service employment agreements, and 1,295 contracted in non-agricultural employment. A number have been placed in hospitals as orderlies or have been sent to employment where conditions have made it difficult for employment offices to supply workers.

WARTIME LABOUR RELATIONS REGULATIONS

Recently I tabled in this house order in council P.C. 1003, known as the wartime labour relations regulations. These regulations will, I hope, mark a milestone in the history of labour legislation in Canada and contribute to a reduction of time lost through industrial disputes and to sound industrial relations generally.

It is very gratifying to note the warm reception the order has received both from representatives of the employers and of the workers and I should like to express my appreciation of the cooperation of the provinces and the employers' organizations and trade unions.

When I addressed the committee last year I took the opportunity to point out the extent to which labour representatives were serving on various boards and committees of my department and to record my appreciation of the very fine contribution which labour is making in this way. This year I wish to repeat my words of appreciation, and it will interest the committee to know that to-day labour has 352 representatives serving on 125 boards and committees of the Department of Labour, including the Unemployment Insurance Commission. This does not, of course, give the whole picture, for labour representatives are serving on many other government bodies. It does, however, suggest a segment of the contribution which labour is making to assist the government.

The contribution of employers and other citizens in regard to these boards and committees is equally great and deeply appreciated. The manner in which men and women from all walks of life have given voluntary service in this way is one of the outstanding features of the work of the Labour department

CURRENT SITUATION AND FUTURE PROBLEMS

In conclusion I should like to say something of the labour supply situation at the moment and suggest some of the problems which we expect to face in the coming months.

Our man-power statistics show that the peak of labour demand for 1943 occurred early in September with 219,000 needed. The labour requirements of A and B priority industries alone (that is of war industries and essential civilian industries) were in excess of 160,000.

During the latter part of 1943 the situation improved considerably from the viewpoint of demand, due partly, of course, to seasonal factors, but also to two causes, namely, a levelling off process in war production, and the fact that our placement plans had shown definite results.

In December 1943, gainfully employed persons numbered an all time high of 4,288,000.

There are still some pockets of labour demand. At March 30 last, labour demand for all industries (not including logging) totalled 92,300, while there were 35,000 applicants for employment who, on that date, had not been referred to jobs.

It is difficult to predict with any degree of certainty the developments which will occur in the labour market situation during the next few months. However, it is possible to make some general observations.

It may be that further cut-backs in war production will result in other lay-offs over the next few months; thus small pockets of temporary unemployment may develop from time to time. However, it should be possible to place most of these men with little delay. There will still be numerous shortages in certain high priority industries.

It is possible that some materials hitherto reserved for war production will be released for the manufacture of essential consumers' goods and so the consequent expansion in civilian production should absorb many workers of both sexes.

Men who were given military deferments because of the essential nature of their work may be made available for military service.

To sum up:

The major task of the selective service system over the next few months will be:

First, to provide the required men for the armed services; second, to meet the labour needs of agriculture; third, to place in employment men discharged from the armed forces; fourth, to meet, as they develop, the urgent needs of certain key industries; fifth, to place men laid off as a result of changes in munition production schedules as quickly and efficiently as possible.

Over the next year it appears that the general shortage of man-power will continue, yet there will be in certain localities at certain periods areas of local, though temporary, unemployment. This is inevitable in a changing war economy.

I am confident, Mr. Chairman, that whatever problems are forthcoming, my department is equipped to meet them efficiently.

I should like before I take my seat to express my appreciation of the cooperation which the Department of Labour has received in the past year. Organized labour, employers, the provinces, particularly the departments of agriculture, the mobilization board, the various advisory boards, all have been of great assistance.

The very large staff of the department has worked hard and faithfully under considerable pressure.

I now ask that the following statistical statements be reproduced in *Hansard*:

Table number — Man-power

1 Canada—Estimated man-power distribution—December 1, 1943.

Employment Operations of Employment and Selective Service Offices

2 Permits issued and separations notified under selective service regulations, January 1–December 30, 1943.

3 Jobs available and placements effected by employment offices, January 1–December 30, 1943.

Wage Trends

4 Total salaries and wages, index numbers of employment and index numbers of wage rates in Canada for the period 1920–1943.

Cost of Living Indexes

5 and 6 (see pages 12 and 13 of text.)

N.S.S. Mobilization Regulations

Man-power distribution

7 Distribution of man-power in the designated age classes by administrative divisions as at March 31, 1944.

Postponements

8 Number and percentage of postponements granted and refused by administrative divisions as at March 31, 1944.

9 Number and percentages of applications for postponement for agricultural workers granted and refused.

10 Postponements in effect by classification as at March 31, 1944.

Medical categories

11 Number and percentage classified in each medical category on first medical examination as at March 31, 1944.

2. Agriculture—males only (v)	1,266	.....	1,266	15·2	1,056	.....	1,056	12·4	935	.....	935	10·7	990	.....	990	11·3	935	10·6
II. Farm Women, 14-64 years of age (vi)	.....	775	775	9·3	.....	775	775	9·1	.....	765	765	8·8	.....	760	760	8·7	760	8·6
III. Students	311	323	634	7·6	293	304	597	7·0	225	275	500	5·7	210	265	475	5·4	475	5·4
IV. Unemployed (vii)					170	91	261	3·1	40	25	65	0·7	20	25	45	0·5	50	0·6
V. All Others—Includes homemakers not on farms	876	2,290	3,166	38·1	348	2,208	2,556	30·0	340	2,170	2,510	28·8	337	2,153	2,490	28·3	2,478	28·1

NOTE.—The above estimates are based on the most recent information obtainable from the Dominion Bureau of Statistics and other official sources. In some cases, (such as agricultural males, farm women, and employers, own accounts and no pays), they are subject to a possibility of considerable error, as little statistical information is available.

(i) Includes prioners of war and persons missing but still on strength. Excludes persons enlisted but on leave and engaged in civilian occupations.
(ii) Does not include women gainfully occupied on farms or in farm homes, who are included in item 3. Does not include wage and salary workers who are temporarily unemployed owing to "No job" or "Lay-off".
(iii) Includes employment on direct and indirect war production and construction, and the war content of employment in ancillary industries.
(iv) "Own accounts" are persons who carry on their business without assistance of employees. "No pays" are mainly family workers receiving no fixed money payment.
(v) The variation in employment during 1943 is due to seasonal factors.
(vi) Since it is impossible to measure statistically the amount of farm work done by women, all women residing on farms are here included except students, women 65 years of age and over and those gainfully occupied outside the farm.
(vii) In 1943, the number of unemployed was accounted for almost entirely by persons temporarily out of work while moving from one job to another.

Table 2

EMPLOYMENT OPERATIONS OF EMPLOYMENT AND SELECTIVE SERVICE OFFICES

Permits Issued under the N.S.S. Civilian Regulations, January 1 to December 30, 1943

1. Permits issued	Males	Females	Total
*(a) Temporary permits to leave agriculture and to accept other employment.....	96,150	2,373	98,523
(b) Regular permits to accept employment.	1,936,067	1,100,657	3,036,724
(c) Total permits to accept employment....	2,032,217	1,103,030	3,135,247

* Virtually all such permits are cancelled or expire, and holders returned to agriculture, on the resumption of spring farming operations.

Table 3

EMPLOYMENT OPERATIONS OF EMPLOYMENT AND SELECTIVE SERVICE OFFICES

Jobs Available and Placements Effected by Local Employment Offices, January 1 to December 30, 1943

Province		Jobs available during year (1)	Placements effected during year (2)
Prince Edward Island	Male	3,818	4,154
	Female	2,006	2,054
	Total	5,824	6,208*
Nova Scotia	Male	58,291	49,881

	Female	744,573	704,126
	Total	2,091,916	1,944,026

(1) Employers' orders unfilled as at January 1, 1943, plus orders notified by employers during 1943, less orders cancelled during 1943.

(2) Number of persons who have been placed in jobs by Employment Offices during the year.

Table 4

WAGE TRENDS

Total Salaries and Wages, Index Numbers of Employment and Index Numbers of Wage Rates In Canada for the Period 1920–1943

	Salaries and Wages (1)	Index numbers employment (1) 1926=100	Index numbers wage rates (2) 1935-39=100
1920	$2,477,573,000	....	112·7
1930	2,625,472,000	113·4	105·2
1931	2,290,236,000	102·5	101·7
1932	1,910,808,000	87·5	94·5
1933	1,740,589,000	83·4	89·6
1934	1,870,685,000	96·0	90·5
1935	2,016,186,000	99·4	93·1
1936	2,162,216,000	103·7	94·8
1937	2,432,219,000	114·1	101·8
1938	2,454,348,000	111·8	104·9
1939	2,554,519,000	113·9	105·3
1940	2,881,980,000	124·2	108·4
1941	3,489,399,000	152·3	119·2
1942	4,197,051,000	173·7	127·5
1943	4,700,000,000 (3)	190·6 (4)	(not available)

(1) From Dominion Bureau of Statistics. The wage and salary figures do not include payments to the armed forces.

(2) From Department of Labour. The figures include cost of living bonus payments.

(3) Preliminary estimate made in the Department of Labour by applying the Bureau of Statistics index of aggregate payrolls to the 1942 total wage and salary figures.

(4) December, 1943. The yearly average was 184·1.

Note.—The index numbers of wage rates apply to wage rates only, not salaries.

The changes shown by the index number of wage rates are not necessarily reflected in the total wages and salaries earned as total earnings are affected also by the changes in the size of the working force (employment index) and by the shift from "short time" in depression years to "overtime" in boom years.

National Selective Service Assistance in Manpower Shortage

ACTION has been taken recently to relieve the stress of manpower shortages in various industries, among them being the canning, meat-packing and ice industries.

Other recent manpower developments affect Canadian border woodsmen working in the northeastern region of the United States; and the employment of merchant seamen.

Canneries

Arthur MacNamara, Director of National Selective Service, announced on May 8 that the Department of Labour is carefully canvassing the manpower supply situation for fruit and vegetable canneries.

While other high priority industries are also presently looking for additional labour, the Director declared that every effort will be made to supply adequate help during the critical canning season to the processors of fruits and vegetables indicated as essential by the Wartime Prices and Trade Board.

Stressing the need of heavy food production this year, Mr. MacNamara added that it is hoped that growers of essential fruits and vegetables will produce maximum quantities, realizing that Selective Service will make every effort to see that labour is on hand when needed.

Meat-packing Industry

Through the assistance of National Selective Service, working staffs of Canadian packing houses were increased by nearly one-third from August last to mid-April this year. The meat-packing industry last summer and fall had been one of the industries most acutely affected by labour shortages. However, staffs have risen from a figure of 12,276 at the end of August, 1943, to 16,222 at April 15, 1944.

Last summer labour shortages in these plants were threatening both the filling of Canada's meat quotas, and the necessary facilities required by agriculture for the orderly marketing of stock. Now, according to the Director of National Selective Service, Mr. Arthur MacNamara, the manpower situation in meat packing is improved materially, but Selective Service is at present taking measures to secure an additional thousand men needed for these plants.

Pointing out that employment in meat packing had not proven very attractive to men seeking work, in competition with other employments, during the tight labour situation in late 1942 and the first part of 1943, Mr. MacNamara summarized the measures taken by Selective Service to meet the situation. These were:

1. The labour priority of the packing industry was raised from "B" to "A". Thus, local employment offices directed more men to the work.
2. Many farm workers were induced to take packing house jobs for the winter.
3. In March a survey of the plants was made, to see how many farm workers might be permitted to continue on in the plants. After consultation with provincial farm labour officers, several were permitted to remain.
4. Farmers, needed at home for seeding, have been asked to return to the plants as soon as they can till harvest.
5. Mobilization Boards were asked not to call up for military training, packing house employees.
6. National Defence was asked to give leave to men who could be spared for packing house work, similar to the arrangement for agriculture.

Mr. MacNamara emphasized the importance which Selective Service attaches to having packing plants fully staffed. The Department of Labour is considering further ways and means of securing the additional men required, he said, and provision made for continuing postponement of military training in the case of farm workers who continue at, or now go into, the packing house industry for work at this time, underlines the urgency of the need, as well as the recognition given to it.

Ice Industry

In 1943, due to the shortage of labour, the ice industry experienced serious difficulties, both in the production of artificial ice and in the handling and distribution of artificial and natural ice. In order to prevent, as far as possible, a recurrence of these difficulties during the present season, local Employment and Selective Service offices have been instructed to pay particular attention to the labour requirements of the industry.

The fact that this service had been given a "B" labour priority, is an indication that its importance is fully recognized. However, labour in this industry has been frozen for the current season, which will materially reduce labour turnover. In addition, special efforts will be made to overcome deficiencies in ice distributing establishments during the peak of the season between May and September.

The types of labour most urgently in demand will be (*a*) platform men, (*b*) delivery men (drivers for trucks and horse-drawn vehicles), (*c*) plant engineers. Every reasonable effort will be made to re-direct drivers and

yardmen from coal delivery operations during the slack season into the ice distribution occupation.

The Wartime Prices and Trade Board is taking necessary steps to insure that ice deliveries are restricted and zoned to permit the greatest possible economy of manpower.

Canadian-American Arrangement Concerning Border Woodsmen

The Honourable Humphrey Mitchell, Dominion Minister of Labour, and Paul V. McNutt, chairman of the War Manpower Commission, announced on April 22 that arrangements had been completed by which Canadian border woodsmen now working in the forests of the northeastern region of the United States would be authorized to remain there without interruption notwithstanding that present exit permits expire on April 30. It was further announced that the agreement provided for the continued maintenance of an average of 3,500 men in the woods for an indefinite period.

Mr. McNutt expressed keen satisfaction over the results of the negotiations and added that the Canadians had fully co-operated in thus assisting the War Manpower Commission in its efforts to relieve the acute woods labour shortage in this highly critical area.

Employment of Merchant Seamen

To prevent the loss of Canadian officers and seamen by their joining foreign-going ships of non-Canadian registry, Order in Council P.C. 2626 was passed on April 13, 1944.

By this order the National Selective Service Civilian Regulations as amended are further amended by the addition of the following section, after section 400 of the Regulations:—

400A. No person who is a Canadian national or who is ordinarily resident in Canada may enter employment at a Canadian port as an officer or seaman on any foreign-going ship of non-Canadian registry without an authorization issued by or on behalf of the Director of Merchant Seamen.

Regional Selective Service Advisory Board

For the discussion of local problems relating to the work of National Selective Service a system of regional advisory boards was set up, (L.G. Feb. 1944, p. 124).

Further to this action and on the recommendation of the Minister of Labour, Order in Council P.C. 2627 of April 13, 1944, was passed appointing to each of the Boards at present established members to represent the Departments of National Defence and Agriculture.

School Teachers to be Granted Indefinite Postponement

IT was indicated on May 3 by Hon. Humphrey Mitchell, Minister of Labour, that a recent change under National Selective Service Mobilization Regulations permits Mobilization Boards throughout Canada to grant postponement from military training to male school teachers for an unlimited time instead of six months' duration as has been the case.

"This change is intended to remove the difficulty which has come to our attention in cases where limited postponements have expired during the school term," Mr. Mitchell stated.

It was further pointed out that this arrangement does not in any way affect the present status of school teachers being frozen to their jobs; rather is it in keeping with the recognition of the teaching profession to be essential to the prosecution of the war and in the national interest.

Hon. Humphrey Mitchell has recently communicated with the Provincial Ministers of Education, asking that they assist in urging all school teachers able to do so to accept essential work during the long vacation this summer.

In writing the provinces, the Federal Labour Minister points out that many of the teachers have had farming experience, and that those who would be useful in agriculture should accept work of that type during the summer if at all possible. Otherwise, they should seek other essential work through Selective Service, so that their services will be made available in one form or another at this time.

Mr. Mitchell states in his letter that there is no intention of interfering with those teachers who have to pursue further courses, to further qualify at their profession, but those not taking courses are required for essential employments.

Extension of Training Facilities to Industries Producing Essential Civilian Goods

IT was announced on April 25 by Hon. Humphrey Mitchell, Minister of Labour, that by Order in Council, P.C. 2692 of April 17, agreements entered into with the Provinces on May 4, 1942, to provide training facilities for workers in direct war production are being extended to make available these facilities for the training of persons required in industries and plants producing essential civilian goods. (see also L.G. July 1942, p. 754 and Aug. 1942, p. 921.)

Training programs being operated jointly by the Dominion and the provinces may now be extended to include courses for the instruction of skilled and semi-skilled workers to meet labour requirements in such essential civilian services as food processing and textile manufacturing.

The arrangement has been reached following consultation with officials of the Wartime Prices and Trade Board, National Selective Service and the Vocational Training Branch of the Department of Labour.

It is planned to offer immediately foremanship and supervisory training, plant training schools and part-time classes in those centres where labour shortages can be overcome in part by training new workers.

Designation of an industry as an essential civilian industry for training purposes, will be made by the Wartime Prices and Trade Board to the Department of Labour.

Re-employment of Personnel Laid Off at Clark Ruse Aircraft Limited, Dartmouth, N.S.

A letter from J. C. Ruse, President of Clark Ruse Aircraft Limited, Dartmouth, N.S., regarding the recent lay-off of about 750 employees at the Company's Dartmouth and Moncton plants, was made public on April 19 by Hon. Humphrey Mitchell, Minister of Labour.

The Ruse Company has been engaged mainly in aircraft repairs, and was forced to reduce its personnel when the volume of repair work fell off in the latter part of March. Layoffs began on March 20 and were completed on April 4. The Lakeburn plant near Moncton released 272 workers; 484 were laid off in Dartmouth. Approximately one-third of the total laid off were women.

At both plants, Employment and Selective Service Officers from Halifax and Moncton were on hand to assist in the lay-off, and to place employees in similar work as quickly as possible. The first workers to be laid off were those who had been on military deferment, but who now could be spared for duty with the Armed Forces. Other lay-offs were made on the basis of seniority under the Collective Labour Agreement and on the basis of actual efficiency in work.

Practically all the employees laid off, who are subject to the Military Call-up, have now been placed in similar work at other manufacturing plants. A number were hired by the Victory Aircraft Company of Ontario, whose representative was on hand at the Ruse Plants during the lay-offs.

On April 10, after the lay-off had been completed, the firm wrote Mr. A. MacNamara, Director of National Selective Service, the following letter—which is quoted in full:

Dear Sir:

Until recently I will admit that we have regarded the National Selective Service as another Government agency set up to add to the burdens of industry.

Now having just come through what is to us and this District a major lay-off with all the factors that lead to friction present, we have revised our opinion.

The very efficient and untiring manner in which your officers handled our situation at Moncton and Dartmouth converted what would otherwise have been chaos into an orderly procedure.

Our Company cannot pass by this opportunity of commending your Messrs. Lough and Goss of Halifax and your Messrs. Trent and Maloney of Moncton for the altogether constructive and considerate manner in which they handled a large group of people under difficult conditions.

Yours very truly,

Clark Ruse Aircraft Limited,
(Signed) J. C. Ruse, President.

Modified Procedure to Provide Job Permits to Workers Living Outside a City

ARTHUR MacNamara, Director of National Selective Service, has announced revisions to simplify the procedure for the issue of permits to seek and enter employment, in the case of workers living in a municipality where there is no Employment and Selective Service Office. This special procedure applies to persons who would be put to more than 30 cents expense in travelling to and from home to a local employment office.

A new form has now been devised, which is available at all local Employment and Selective Service Offices, and which will also be available through local post offices. The worker living in a rural district or in a town without an Employment and Selective Service Office may, even without a permit, seek employment in the municipality in which he resides, providing that he has already applied for a Selective Service permit on the new form N.S.S. 102-A. An employer in his municipality may engage the worker who has applied for a permit on this form for a period of up to seven days, but after that time the employee to continue on the job must have secured his permit to work from Selective Service in the regular manner.

The new form, in addition to being an application for a job permit, covers the standing of male applicants in regard to Mobilization Regulations.

Mr. MacNamara pointed out that the purpose of the new form is to facilitate acceptance of employment by residents of rural districts and small towns, while still maintaining the necessary wartime control over applicants living in such localities.

Training of Manpower in the United States

ENROLMENTS in Federal, State and local training programs authorized by Congress as a means of providing civilian war production workers with necessary skills have totalled more than 12,000,000 in less than four years and have advanced to a remarkable degree the home-front "battle of production", Paul V. McNutt, head of the two Federal agencies chiefly responsible for training the nation's wartime labour supply, announced on May 7.

Mr. McNutt's announcement was made in his dual capacity as Chairman of the War Manpower Commission and Administrator of the Federal Security Agency and was based upon reports received by him from the U.S. Office of Education, which administers vocational and college training, and the WMC Bureau of Training, which coordinates all training activities including Apprentice Training Service and Training Within Industry of the WMC. The training totals are cumulative from July 1, 1940.

The heaviest training loads were carried by trade and vocational schools under the program of Vocational Training for War Production Workers, and by the Food Production War Training Program, both of which are administered by the U.S. Office of Education through State Boards for Vocational Education and local public school systems. The next heaviest enrolments were in engineering colleges and universities under the Engineering, Science and Management War Training Program, also administered by the U.S. Office of Education.

WMC Training-Within-Industry program was fourth in size of enrolments and National Youth Administration, which has been discontinued, was fifth.

Mr. McNutt's announcement also revealed the extent of the services provided to war industries by WMC's Apprentice Training Service, a constituent agency of the Bureau of Training, and of the Division of Visual Aids for War Training of the U.S. Office of Education.

The training totals by agency:

Agency	Total
Vocational Training for War Production Workers	6,238,620
Food Production War Training	2,498,972
Engineering, Science and Management War Training	1,472,503
Training-Within-Industry	1,163,540*
National Youth Administration (discontinued)	772,756
	12,146,391

* Includes approximately 663,000 enrolments trained co-operatively with VTWPW.

Apprentice Training Service, which does not give actual training courses, but helps to prepare the way for sound training programs and assists essential war industries in the labour relations aspect of training and employment, served, Mr. McNutt reported, approximately 41,450 individual plants since July 1, 1940. The Apprentice Training Service provides impartial consultative service to employers and assists in analyzing training needs, devel-

oping training programs in order to provide skills for workers to meet definite production requirements. Good labour relations are encouraged through management-labour committees.

The Division of Visual Aids for War Training, Mr. McNutt reported, has approximately 20,000 training film prints in use in war industries and in war training classes of vocational schools, and approximately 10,000 training film prints in use in military establishments. The training films of this division, which cover 95 mechanical subjects, including machine shop, aircraft, shipbuilding occupations, welding, engineering, supervisory training and farm work, save from 25 to 35 per cent of the time required to train workers, Mr. McNutt said. Leading manufacturers have co-operated in helping to create the training films. About 400 additional training subjects are being filmed.

Since 1940 a total of 224 colleges and universities have participated in Engineering, Science and Management War Training to give approximately 34,000 short, intensive courses on the college level of training. The scope of training has ranged from the rough equivalent of freshman work in engineering, chemistry, physics and business management up through graduate work in those fields. The objectives have been to prepare high school graduates for war service as assistants to professional engineers and scientists, to realign the skills of displaced technical personnel for work in new war industries, and to salvage the reservoir of competence residing in mature persons in need of "tune-up" training for jobs which use their abilities in unaccustomed fields.

Training-Within-Industry, in a little more than three and a half years, through intensive, short courses for supervisors has reached more than 800,000 supervisors with job instruction, 125,000 with job methods training, and 235,000 through job relations. More than 12,000 plants have been assisted with an intensive program of "upgrading" plant supervisors in skill of instruction, skill of improving methods and skill of leading workers, and the "know" of what the work is and "how" it is to be done.

Approximately 135,000 courses have been given in 15,000 training centres under the Food Production War Training Program since July 1, 1940. More than one million pieces of farm machinery and equipment were overhauled and repaired by farmers attending courses during the last year. Keeping in operation millions of dollars' worth of farm machinery and equipment has stimulated food production. This program has also assisted farmers and farmers' wives through courses in methods of achieving production goals and the training of new agricultural workers. During the last year 204,021 persons in 21,000 courses have canned 50 million cans of food for family use.

Vocational Training for War Production Workers Program has conducted training in approximately 2,800 training centres, training new and employed workers in specific single skills, and "upgrading" workers for more responsible jobs. This program has provided consultative service to employers in co-operating with both Apprentice-Training Service and Training-Within-Industry. Training programs are set up within the vocational school or within the plant for occupational workers and foremen and supervisors. Several of the States have developed instructional materials for shop and related training.

In addition to training workers for war production industry the training programs co-ordinated by the WMC Bureau of Training, and particularly those administered by the U.S. Office of Education, have provided training where necessary for civilian employers and uniformed personnel of the U.S. Army and U.S. Navy, U.S. Coast Guard, and Marine Corps, covering a variety of training in occupations for workers in arsenals, yards, air depots, torpedo stations, Signal Corps establishments, ordnance, and other military establishments.

Training has been supplied by the training agencies to every branch of war industry, including shipbuilding, the aircraft industry, ordnance manufacturers, electrical manufacturers, the chemical industry, transportation, communications, and other essential industries.

The continuing functions of the co-operating training agencies, co-ordinated by WMC's Bureau of Training, are:

1. To increase the effectiveness of workers and supervisors who are employed in war industries.

2. To prepare beginning workers, including women, youth, older persons, discharged veterans and handicapped persons, for employment.

3. To retrain workers shifting from one department of a plant to another or from one industry to another.

4. To train plant supervisory personnel in short courses.

5. To provide consultative services to employers and to encourage the formation of joint management-labour training committees; to continue to organize training programs where they are necessary.

6. To provide training necessary to reach farm production goals.

School for Coal Miners in Utah, U.S.A.

A school hundreds of feet below the surface of the earth, where clerks, grocers, and mountain men of the surrounding country are the students learning to become coal diggers, has been started in the Carbon County mines, near Prince, Utah, as a phase of the nationwide effort of the War Manpower Commission to increase war-time production of fuel. This is the first school of its kind in the history of mining, WMC said.

Approximately 900 mine workers have been trained in the Utah school for miners since it was started, according to reports received by the War Manpower Commission. Classes are conducted in several mines in which sections have been set aside especially for instruction of men. Under this type of "on-the-job" training the student miners receive instruction from skilled miners who have been specially selected as instructors. They are employed by the Utah State Board for Vocational Education. The trainees, paid by the mining companies, are men who have not worked previously in the mines.

Under the Utah plan of training, each mine job is carefully analyzed so that the instructors know exactly what to teach the beginning miners. In addition to manual dexterity in the mining of coal, the trainees are taught safety rules, including the reasons for them, WMC reported.

In addition to training for new miners, training is given men and women who work on the surface. Women, although not permitted to work underground, are being employed and hired for surface jobs such as "pickers". Two companies in the Carbon County mines, according to WMC reports, are employing women on the surface. Other mines in the area are expected to follow this example.

Under the Utah plan, training is speeded up so that the learners in a few months are taught skills and related knowledges that will fit them for mine jobs.

The WMC and co-operating training agencies are assisting the coal industry, a critical manpower industry, in solving urgent manpower needs by setting up special training programs in an expanding number of mining communities. Training programs sponsored by the U.S. Office of Education in co-operation with State Boards for Vocational Education are now being operated in Utah, Colorado, Kentucky, Pennsylvania and West Virginia. Training is being given for mine supervisors in addition to coal diggers, machine operators, and maintenance personnel.

School for Railroaders in St. Louis, U.S.A.

A wartime school for railroaders, first of its kind, established recently at St. Louis for the training of essential workers—firemen, brakemen, and switchmen—has proved so successful that it may become the pattern for a nationwide plan of organized training to keep the railroads operating at highest efficiency possible, the War Manpower Commission announced on May 5.

The St. Louis plan, WMC reported, is being studied by railroad officials in other parts of the country with a view to utilizing it in whole or in part. It was reported that officials are now considering the establishment of similar schools at Chicago, Seattle, and possibly at other points.

The St. Louis school for railroaders was set up in co-operation with the WMC Bureau of Training and vocational training specialists to meet a serious need for additional firemen, brakemen and switchmen. Nearly 100 firemen, brakemen and switchmen were enrolled in the school, the training taking place in the offices and yards of the St. Louis Terminal Railroad Association, which became "classrooms" for the duration of the courses. The Terminal Railroad Association, the Missouri Pacific Railroad and the St. Louis and San Francisco Railroad co-operated in the undertaking.

The training of this first group of train and enginemen proved so successful, WMC said, that the railroads involved were highly pleased with the results. Classes for trainmen and enginemen have been followed at St. Louis by classes for railroad telegraphers.

WMC reported it is receiving calls through its Bureau of Training and co-operating training agencies for training of essential workers in increasing volume from transportation companies, including both railroad and bus lines, in order to forestall shortages of workers necessary to keep wartime freight and passenger service operating smoothly.

Training for telegraphers, in addition to classes at St. Louis, has been set up at widely separated points, including Portland and The Dalles, Ore., Minneapolis, and Kansas City. Schools for railroad rate clerks have been set up at Charlotte and Winston-Salem, N.C., and other points. Courses for car repairmen recently were authorized at St. Cloud, Min.

Area Production Urgency Committees in the United States

THE War Production Board announced on April 25 some developments in the field machinery through which it joins with the War Manpower Commission and other federal agencies to ensure that, in areas where a labour shortage exists, all available manpower is made available to plants engaged in critical war work.

The WPB has reported the creation of an Area Production Urgency Committee for the Chicago area, similar to the Area Production Urgency Committees which have been functioning for sometime in critical production areas on the West Coast. The new Chicago Production Urgency Committee is headed by the Regional Director of the War Production Board, and will include representatives of the War Manpower Commission, the Armed Forces, and other agencies charged with co-ordinating contract placements, production, and manpower.

The specific functions of the new Chicago Urgency Committee will be:

1. Review of contracts in the area.
2. Review of new facilities in the area.
3. Establishment of plant urgency ratings.
4. Surveys of production in the area, with a view to considering removal elsewhere if necessary.
5. Determination of urgency of civilian production in the area, as a basis for determining whether workers should be made available for such activity.

It was also announced that a number of "modified area production urgency committees' are to be established in various parts of the country, wherever the War Manpower Commission has established a manpower priorities committee but a full-flegded area production urgency committee has not been established. The modified area production urgency committees differ from the regular urgency committees in that the former may be established by any WPB regional director, whereas the regular urgency committees are established upon direct authority from the WPB Production Executive Committee in Washington.

The functions of the modified committees are limited to the supplying of data and advice to the War Manpower Commission as to the relative urgency of plants in the area affected, together with other pertinent data, such as whether the plant is behind schedule or on schedule. Upon request, the modified committees will also advise appropriate officials of the War Production Board, or other agencies, concerning production adjustments within the area over which each committee has jurisdiction. The regular area urgency committees, such as the ones on the West Coast and in Chicago, have additional duties, including the review of proposed supply contracts and facilities. Each of the modified urgency committees will include representatives of the following agencies: War Production Board, War Manpower Commission, War Department, Navy Department, Maritime Commission, War Food Administration, Aircraft Resources Control Office, Smaller War Plants Corporation, and such other agencies as the committee may from time to time invite to assist it. In all cases, the modified urgency committees will report directly to the WPB regional director in charge of the area in which the committee functions.

Employment in Non-agricultural Establishments in the U.S.

The total number of employees in non-agricultural establishments in March, 1944, was, 38,550,000, according to revised estimates prepared by the Bureau's Division of Employment Statistics. This represents an increase of more than nine million employees in manufacturing, trade, services, government and other phases of industrial activity in the five years since March, 1939. The estimates include all wage and salaried workers in non-agricultural establishments. They do not include persons in the armed forces, agriculture, proprietors and self-employed persons, unpaid family workers nor domestic servants. Persons having more than one employer during a single pay-roll period are counted more than once in these estimates. As job opportunities have been increasing since 1939, it is likely that such dual employment is a somewhat more important factor now than five years ago.

As was to be expected, the bulk of the expansion, 6½ million or almost three-quarters of the total, was in the manufacturing division and was concentrated almost entirely in the munitions industries. The increases of about two million in government and one million in transportation and public utilities also reflect the widespread effects of the war activity. The only large decline was in construction. This industrial activity expanded between March, 1939, and September, 1941, but declined thereafter because of government restrictions on private building. The increase in the first 2½ years amounted to slightly more than one million employees; the decrease since that time was almost two million, indicating a net decline of about 800,000 over the five years.

Reconstruction and Re-establishment

Post-war Training and Employment of Members of the Forces

AN Inter-Departmental Committee was recently established, with the approval of the Ministers of Pensions and National Health and of Labour, "to study the legislation and regulations of the two departments in respect to post-war training and employment" of members of the Armed Services. The two departments referred to are, of course, Labour and Pensions and National Health. However, through the membership of its chairman, the Civil Service Commission is also represented on the Committee, as are the three Defence Departments.

The chairman of the Committee is Arthur MacNamara, Deputy Minister of Labour and Director of National Selective Service: the vice-chairman is S. H. McLaren, Associate Director of Selective Service in charge of Mobilization. The secretary of the Committee is Brigadier John E. Lyon, recently appointed to the Employment Service for special duties in connection with the placement of discharged members of the Forces.

Members of the Committee from the Department of Pensions and National Health are: Walter S. Woods, Associate Deputy Minister; Major A. M. Wright, Director of Rehabilitation; A. Crawford, Superintendent of Vocational Training; H. W. Jamieson, Superintendent of Educational Training; and Dr. Geo. Weir, Acting Director of Training.

Other representatives on the Committee from the Department of Labour are: Paul Goulet, Associate Director of National Selective Service; Harry Hereford, Director of Planning, Selective Service; R. F. Thompson, Director of Training Division; from the Employment Service and Unemployment Insurance Branch—Allan M. Mitchell, Director, and W. K. Rutherford, Assistant Director (Employment).

From the Civil Service Commission: Charles H. Bland, Chairman of the Commission;

From the Defence Departments, the Directors of Rehabilitation as follows:

Navy—Lt. Com. John H. MacDonald,

Army—Col. H. M. Haig, D.S.O.,

R.C.A.F.—Wing Commander A. C. T. Clayton, D.F.C.

It is intended that the Committee will study and prepare for the approval of the appropriate authorities, detailed departmental procedures for the guidance of the staffs of the departments of Labour and Pensions and National Health, in regard to the training and employment of ex-members of the Forces in the post-war period. It will be the duty of the Committee to suggest procedures, to suggest what matters should be further explored with a view to a revision of policy, and in every way to assist in correlating the efforts of the two departments mainly responsible for the post-war re-establishment of those discharged from the Services.

Unlike the training of men and women who have been with the Forces, which is a joint function of the two departments, the re-establishment of men and women now in munitions and other war industries is recognized as a function of the Department of Labour. Nevertheless it is the intention that this same joint Committee will give consideration to certain phases of post-war re-establishment of industrial workers, since this problem is so closely related to the post-war re-establishment of members of the Forces.

The Committee has already met and is proceeding with its task.

To date the work of Brigadier John E. Lyon has been largely exploratory. At the present time he is engaged in studying how the Employment Service operated by the Unemployment Insurance Commission may to the best advantage assist in the transition to civilian employment of persons being discharged from the Armed Services. A recent announcement indicated a closer tie-up of the Employment Service in the treatment of discharged Services' personnel, in the first instance particularly in reference to the R.C.A.F. and the Army.

National Registration Certificates Issued to Discharged Service Personnel

IT was announced on April 19 by Arthur MacNamara, Director of National Selective Service, that arrangements were being completed to appoint Managers of certain of the larger local Employment and Selective Service Offices as Deputy Registrars with the authority to nominate members of their staff to issue National Registration Certificates to discharged members of the Armed Forces.

"This arrangement has been effected as an additional service to the discharged service personnel instead of their having to report to Post Offices in order to obtain their certificates," Mr. MacNamara stated. "The local offices which will be carrying out this procedure within the next tweek are the following: Halifax, Saint John, Fredericton, Quebec, Montreal, Kingston, Ottawa, Toronto, London, Winnipeg, Regina, Calgary and Vancouver."

It was further indicated that persons leaving the Forces may be supplied with a National Registration Certificate by Selective Service in those cases where they were not registered prior to enlistment. In the case of persons who were previously registered, they will be provided with "fourteen day" certificates to be used until the original certificate is received from the Chief Registrar at Ottawa.

Housing and Community Planning

Extensive Program Recommended by Advisory Committee on Reconstruction

AN extensive housing program for Canada, involving the building of 700,000 new dwellings in the first post-war decade, is called for in the Report on Housing and Community Planning of the Advisory Committee on Reconstruction. The report was tabled by the Prime Minister in the House of Commons on March 28.

Estimated to cost in the neighbourhood of two and a half billion dollars, this program would provide 535,000 urban dwellings, 71,000 houses in rural areas, and 94,000 farm homes. Over 200,000 of these projected new units would be low-rent dwellings (including multiple dwellings as well as single units). Government loans, provided through a revised national Housing Act, would probably amount to between three-quarters of a billion and one billion dollars under this program; in addition twice as much would be forthcoming in the form of assisted private investment from individuals and lending institutions. This would represent a great volume of work for the building industry. To help assess the size of the program it may be compared with the 100 to 180 million dollars spent annually on residential construction during the best years of the '20s.

Canada's urban housing needs are of two kinds. There is, first, the accumulated backlog caused by insufficient new building during the last decade, abnormal growth of towns and cities due to war industrial development, and the present lack of any vacant dwellings. Included in this backlog are houses needed to relieve overcrowding, and houses needed to replace substandard and slum dwellings.

The second need for new homes arises from the fact that Canada has never had a housing policy based on the replacement of obsolescent houses. The Report recommends a replacement plan of two per cent per year as desirable for the future, giving the average house a life-expectancy of fifty years. In making up its "minimum-target" estimate, however, it does not include an allowance for this type of replacement.

Accumulated Backlog

To keep up with the normal population growth in the chief urban areas alone, the Report estimates that 30,000 new houses should be built every year. Approximately 24,000 units, including temporary housing, were built in 1941, and about 18,000 in 1942. In 1943 new houses did not add up to more than 15,000. It is estimated that by 1946, which is taken as the first likely year of post-war construction, this deficit of new homes will total 45,000.

Another complicating factor is the abnormal growth of most of Canada's cities due to the war. The normal urban population increase for the six-year period ending December 31, 1945, would be 200,000. Actually it will be about 500,000 of whom it is estimated that half or perhaps two-thirds of the newcomers will want to stay where they are after the war. New housing for these war workers and their families who will remain in towns and cities after the war has been set at the low figure of 40,000.

The desirability of maintaining a "vacancy rate" is explained by the statement that "in

a dynamic economy, a constant shift of population takes place at a more rapid rate than changes in the housing supply . . . The housing supply must exceed the number of families and household groups if occupational flexibility and shifts of population are to be facilitated at all." A desirable vacancy rate for most cities is 4 per cent, but as all figures in this report have been based on minimum assumptions, 2 per cent is the figure taken. This totals up to 29,000 units of new housing needed in Canada if we are to be sure of a minimum flexibility for residential and population shifts; but these are not included at all in the immediate or minimum program of 535,000 referred to above.

One in six of Canada's urban families are living with other families. In addition to these 150,000 "doubled up" households, there are 44,000 non-family groups (such as two sisters, or several friends) living with families. To provide all these people with their own homes would require the new building of 194,000 homes (150,000 plus 44,000); but again, only 150,000 are included in the immediate program.

Slum clearance and the replacement of substandard housing calls for the construction of 175,000 new dwellings, 125,000 of them in the major cities, and 50,000 in the smaller cities and towns.

Adding in housing requirements for non-incorporated parts of metropolitan areas which are estimated at 12,000, the whole accumulated backlog comes to 320,000 homes needing to be built to catch up with present needs. For its minimum target of shortages to be liquidated in the first ten years after the war, the Report takes half this figure, and calls for 160,000 new homes.

Current Housing Needs

In addition to this figure, an estimated 30,000 single homes should be built every year to accommodate new families or non-family households, and 27,000 obsolescent houses should be replaced every year. For a minimum objective, the Report recommends the building of 24,000 homes for families, and 13,500 replacements annually—a ten-year total of 375,000 houses. The two figures for the accumulated backlog and current needs make up the aggregate of 535,000.

The remaining 165,000 new homes needed to make up the total of 700,000 are for farms and rural areas.

Timing the Housing Program

Excluding the farm housing, and maintenance and repair programs, the Report shows that 60,600 new urban homes should be built every year on the average. But it does not suggest that the same number should necessarily be adhered to each year. It recommends instead that the housing program should be fitted into the larger framework of postwar policy, aiming at economic stabilization and full employment.

A possible "shape of things to come" is outlined in the Report. It suggests that, should the war end in 1946, that year and the one following would be a "reconversion period" in which industrial conversion and demobilization from the armed forces would be carried out. The next three years are envisaged as a period of "re-equipment and new consumer-goods production," and 1951 as the year which might see the peak of economic activity and a possible turn towards a depression. From 1952 to 1954 there might then be a rapid contraction of economic activity, and in 1955 the beginnings of a slow recovery.

The Report therefore suggests a substantial program (including maintenance projects) to take up the slack of demolition, followed by a contraction of activity during the "boom" years. Then as economic activity slows down, it would follow that the housing program should be stepped up, and allowed to decline again as general business recovers.

"Housing must be a strategic element in full employment policy as well as a basic factor in the national standard of living in the postwar period," says the Report. "The national and local dimensions of housing programs, the methods of financing them, recruitment and training programs for the men who are going to build the houses, and town planning provisions which are necessary to locate projects properly, must all be planned together."

Farm Housing Plan

New houses for Canadian farmers equipped with electric lighting, plumbing and refrigeration is recommended in the Report.

A building program to provide farmers and farm labourers with an average of 9,400 new houses annually for twenty years at an estimated total cost of $282,000,000 is advocated. Other recommendations include the setting up of a special rural division of the National Housing Administration, or a Farm Housing Advisory Committee in the Department of Agriculture to co-ordinate farm housing with other policies affecting land utilization, production credit, marketing arrangements, trade and price policies, and farm labour policy.

The fact that farm houses differ from urban houses in their need for special facilities for storage, canning, preparation of animal feeds, kitchens and laundries has been recognized in the Committee's suggestion that special archi-

tectural designs, materials, techniques and building organizations should be employed. The Report calls for consultation with farmers and farmers' wives themselves, as well as architects, Departments of Agriculture, and farm housing experts.

In addition, it is estimated that 188,000 of Canada's 733,000 farms are in need of major repairs, of an average cost of $300. Adding in the many smaller repairs required by other farm houses, it is estimated that Canada faces a farmhouse repair bill of over $100,000,000, and that this work could be made a useful post-war project and could dovetail in with longer range plans for rebuilding.

Commenting on the fact that 80 per cent of farm homes have no electricity, and 92 per cent have no bathing facilities or flush toilets, the Report recommends a scheme by which the Federal Government donates electrical, plumbing, heating and refrigeration equipment to farm housing projects in return for the labour of installation.

Types of Housing Needed

The new building program is based on three types of need. The first is the replacement of farm houses in such bad condition that it is better economy to replace them than to repair them. There are estimated to be 200,000 of these in Canada, and as a minimum objective, half that figure has been taken.

The second type of new housing is the erection of houses for farm families who are at present sharing homes with other families. There are 51,000 such families at present, but as a minimum target the Report calls for the construction of 25,000 dwellings.

These two estimates are regarded as a minimum backlog which should be dealt with as soon as possible. It is recommended that the building of these houses be spread over 20 years, and that the number of farmhouses built each year should vary according to the building and labour conditions at the time.

The third type of construction is the replacement of farm dwellings which become obsolete and run down as time goes on. If these buildings are not systematically replaced, another backlog will accumulate. Assuming that a farm house should last a hundred years, Canada should arrange to rebuild one per cent of its existing farm dwellings every year—an annual total of 6,300. In its estimate, however, the Report cites as a minimum program the rebuilding of half that number.

The erection of cottages for farm labourers is also recommended. Listed as part of the farm population are 25,000 unpaid sons or other relatives helping on the farm. Some of these boys or men might be more easily persuaded to marry and settle down on the farm if there were a separate cottage available. Alternatively, cottages could be constructed in groups or village communities.

Community centres are also recognized as an important rural need. Buildings planned for use as recreational centres, for meetings, films, exhibitions and libraries could be put up. The Municipal Improvements Assistance Act or the National Housing Act could be extended to make provision for long-term amortization and low-cost financing for this purpose.

It is also suggested that a special organization, such as a Farm Building Supplies Corporation, should be set up to arrange for special priorities for farmers on war material, salvaged or otherwise, which will be available for civilian use after the war.

Financing the Housing Scheme

The Report recommends a number of methods of financing such a comprehensive building scheme at the least cost to the farmer. It suggests redrafting the National Housing Act and the Home Improvement Plan to make possible either a lower rate of interest than that applied to urban loans, or a capital subsidy. It further recommends that the Government pay for mortgage insurance instead of the farmer.

Further reductions in cost could be achieved by pre-fabrication and mass-assembly devices, by buying certain materials in large quantities, and by utilizing the labour of the farm family. Elimination of a down payment is suggested, along with adjusting instalment payments to crop seasons, so that farmers can pay when their own money comes in.

Farm labourers' cottages could be financed in four ways. They could be erected as new farm units under a proposed Farm Improvement Plan. This plan would be a revised form of the Home Improvement Plan, by which loans would be extended from five to as much as twenty years to cover new farm units, and which would authorize subsidies on interest or capital.

If there is no mortgage on the farm, the farmer can set aside a piece of land and build cottages under N.H.A. If he has a mortgage on his farm, he can deed a small piece of land to N.H.A. which will enable him to take out a housing mortgage on the new house.

Cottage villages could be built by the municipal authority using a Federal subsidy.

Commonwealth Authorities Concerned with Re-establishment in Australia

SEVERAL Commonwealth agencies have been set up to deal with re-establishment in Australia.

(1) The Repatriation Commission which was established under the Australian Soldiers Repatriation Act of 1920 is responsible for investigating applications for pensions, the payment of pensions, medical treatment, subsistence allowance during periods of medical treatment and job placement, advances for establishment of business, provision of tools of trade, education of veterans children, and such other functions as the Act prescribes.

(2) The Manpower Directorate is concerned with placement.

(3) Vocational and industrial training comes within the jurisdiction of the Industrial Training Division of the Department of Labour and National Service. This organization has had considerable experience with the training of civilian and service personnel in technical occupations.

(4) University and professional training is handled by the Universities Commission. This Commission also has the duty of administering a subsidies plan enabling students to undergo university and other approved training.

(5) Rehabilitation departments have been set up by the Army, Navy and Air Force.

(6) Over-all planning and co-ordination is the responsibility of the Ministry of Post-War Reconstruction. To deal with the more important particular aspects of rehabilitation there has been established a number of inter-departmental committees responsible to the Ministry. Chief among these are:

(*a*) the Demobilization Committee composed of representatives of the Ministry of Post-War Reconstruction, the Repatriation Commission, the Directorate of Manpower, the Department of Labour and National Service and the three services. Its duty is to integrate the various plans for demobilization with plans for re-employment and reconstruction.

(*b*) The Re-establishment and Re-employment Committee has the same membership as the Demobilization Committee except that the Service representatives sit only as circumstances demand. This Committee prepares plans and machinery for replacement of veterans and war workers.

(*c*) The Reconstruction Training Committee consists of representatives of the Ministry of Post-War Reconstruction, Department of Labour and National Service, the Repatriation Commission, the University Commission, the Treasury, and the three Services. The duty of this Committee is to advise on and plan for pre-discharge and post-discharge training for members of the services.

Re-employment of Veterans in the United States

"RE-EMPLOYMENT of Veterans" is the title of Industrial Relations Memo No. 65, dated April 17, 1944, published by the Industrial Relations Counsellors of New York City. This organization has recently conducted an inquiry into this subject. The inquiry was centred on the following postulates:

1. The re-employment of veterans following their demobilization is already a matter of some urgency. It is asserted that there will be one million discharges from the forces of the United States in 1944. This circumstance will give an opportunity to test out policies and procedure in advance of general demobilization.

2. By taking action now, employers will be better able to think through the implications of the requirements and reach decisions as to sound policy that will promote comprehensive official interpretations, which, it is asserted, "as yet are lacking."

3. The success or failure of the American economy in giving employment to ex-service men will have far-reaching political and social consequences that may well determine the future of American industry and business for the next generation.

It is pointed out at the outset that the re-employment of ex-service men is only part of the broader post-war problem of how to re-absorb into civilian production within a period

of a year or two, over 20 million men and women from the armed services and from war industries and to provide employment for a total civilian labour force that will total nearly 54 million. This will be about 11 million or 12 million more than were employed in 1940, the peak year of peacetime production.

The Department of Commerce of the United States is quoted as having stated that the solution of this problem will require, with hours of work reduced to 1940 levels and unemployment held to a minimum of 2 million, an increase in physical production of 46 per cent over 1940. It is emphasized, however, that these figures are not precise statistical estimates and that there are variations in official calculations. The A.F. of L. is quoted as being of the opinion that there will be 19 million unemployed in the United States after the war, unless production exceeds 1940.

But, it is pointed out, individual plans cannot wait on the resolution of all uncertainties. The re-employment of veterans is a specific obligation imposed by law on all employers, consequently the problem merits the immediate consideration of employers, either as a part of, or as a start toward a company's general post-war plans.

It is asserted that an employer who has sound industrial relations policies, and administers those policies efficiently, will find compliance with the somewhat ambiguous legal requirements relatively easy if he interprets and applies them in accordance with the principle of company seniority, counting service in the armed forces toward seniority credit.

However, it is pointed out that the significance of such legislation must not be overestimated, as, at best, it can contribute in only minor degree to the solution of the post-war re-employment problem, because of the numerous veterans who will not be covered by the terms of the law. The latter include:

1. Men who enlisted or were drafted when they were unemployed or not at work; thirty-three per cent were inducted from school before entering gainful employment.
2. Veterans who will have no right to reinstatement, because they were engaged as replacements and other veterans will have prior claims to the jobs in which they were last employed.
3. Veterans whose jobs have been wiped out by business failures, technilogical change or similar factors.
4. Those who may have legal rights to reinstatement in specific identifiable jobs, but will not wish to exercise such rights, since in so doing they would be displacing older persons, widows with children or others, and thus subject themselves to social disapproval.

"One competent authority estimates the number of men in the service who would, for one or another of these reasons, have no effective claim to reinstatement as 80 per cent of the total."

The memorandum includes an analysis of the legal requirements for the rehabilitation of veterans in the United States and discusses in some detail the implications of the law. Such points as the meaning and scope of the law, qualifications required of veterans for reemployment; the various complexities of seniority "rights"; administrative machinery; the treatment of disabled and handicapped veterans; the probable attitude of returning servicemen; employer planning; vocational training as a factor in rehabilitation and other related questions.

It is indicated that while post-war planning involves standard techniques such as budgeting and forecasting, it also has at least three distinctive and to some extent unforeseeable elements:

1. The problems to be solved may be more urgent and fundamental than businesses usually meet in their normal experience.
2. Most employers will be facing substantially the same problem at the same time.
3. The political, legal and social climate, both domestically and internationally, in which the solutions will have to be found cannot now be definitely foreseen.

In the meantime, company officials charged with the development of post-war plans and the reinstatement of veterans, should collect adequate data, with respect to the set-up in their own plants. Preparation in advance will naturally avoid much confusion when the time for demobilization arrives.

Labour Relations

Promotion of Labour-Management Committee by Industrial Production Co-operation Board

TO encourage and assist employers and their employees in the formation of labour-management committees is the aim of the Industrial Production Co-operation Board which was established in January (L.G., Feb. 1944, p. 145).

Considerable progress has been made, not only in setting up procedures by which the Board is to function, but also in the formation of new production committees. Mr. H. Ross Rutherford is the Executive Secretary of the Board and his office serves as a clearing house for information concerning the establishment and functioning of labour-management production committees. In addition to this the services of nine field men in Toronto, Montreal, Winnipeg, Vancouver, Fredericton, and Sydney are continuously at the disposal of both employers and employees through their organizations or otherwise, for the promotion of committees. Much valuable information was obtained from United States' experience in the development of these committees during the war when officials of the Board visited the National Exposition of Labour-Management Production Committees at Washington in February.

By the end of April close to 200 labour-management production committees were reported to the Board.

The Board and its work has received considerable publicity in the press, on the radio and through the distribution of literature. *Victory in the Making,* a guide book issued by the Board dealing with the purposes and need of production committees, is being distributed widely among industries and trade unions. In this effort the Board has received the willing co-operation of the Canadian Manufacturers Association, the Canadian Construction Association, the Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Canadian and Catholic Confederation of Labour, etc. This booklet gives much interesting information on the purpose and functions of labour-management production committees and contains helpful suggestions as to their organization and efficient functioning. Brief references are made to the success of such committees in Great Britain and in the United States. Arrangements have been made with the National Film Board for the showing of the film "Partners in Production" dealing with British joint production committees. It will tour the industrial film circuit and be shown to employer and trade union groups. Monthly bulletins are issued to all labour-management production committees providing them with helpful information on various phases of committee activity.

On March 29 the chairman of the Industrial Production Co-operation Board, Mr. H. C. Goldenberg, took part in the National Labour Forum program. During the course of his remarks he said:

"I feel that the adoption of the principle of joint production committees in industry is a forward step in the march of industrial progress. These committees provide a new approach to the relations between labour and management. They provide a formal channel of communication on problems of production, that is, on matters other than grievances arising from wages and hours and working conditions. That, in itself, is a great advance. Collective bargaining, in my opinion, is essential in so far as wages and working conditions are concerned. But, as the term implies, bargaining involves two opposing sides trying to come to an agreement. Both parties are in a sort of defensive role. Well, the purpose of labour-management committees is to go one step further and to make labour's role in industry a more positive one. Labour meets with management for the solution of problems which do not involve bargaining, but which are the concern of the plant or the industry, as such.

Where a labour-management committee functions properly, it infringes neither upon the authority of management nor upon the authority of the trade union. The responsibility of management for the conduct of the business

remains intact, but management asks advice and recommendations from the workers in the plant on matters bearing on production. This principle gives the worker a sense of responsibility and makes him feel that he is more than a mere cog in the wheel of industry. It assumes that the man at the machine can contribute advice on the best method of operating that machine . . . how time can be saved, unnecessary operations eliminated, and materials conserved. It has been found in Great Britain, in the United States and in Canada that formal consultation of this kind at regular meetings of representatives of labour and management gives to the workers a greater interest in their task. And they give to management the benefit not only of the hands but also of the brains of the workers. Many plants attribute increased and improved war production to the effective operation of join production committees.

"I have said that the committees do not affect trade union responsibilities. Wages, working conditions, and grievances continue to be referred to the appropriate collective bargaining agency. Labour-management committees do not intrude upon this field, but they do affect it in that they provide an outlet for the discussion of problems which might otherwise develop into grievances. They are concerned with such matters as improvements in methods of production, the proper utilization of machinery, the elimination of defective work, the changing of obsolete practices, the conservation of materials, tools and equipment, the elimination of unnecessary planning or routines, the efficient use of safety devices, reduction in absenteeism, and, generally, the maintenance of a good morale in the plant.

"Well, these are, in my opinion, some of the functions and the benefits of joint production committees. I recommend them to Canadian industry. The government has declared its official policy in support of the principle. It has set up the Industrial Production Co-operation Board, representing the Departments of Labour and of Munitions and Supply, to carry that policy into effect. The Board is advised by a committee equally representative of labour and management. It is the intention of my Board to contact labour and management in war industries with a view to promoting the formation of more of these committees and of guiding those committees to the extent that they require our assistance. We must recognize, however, that the mere establishment of committees will not, of itself, produce effective results. In order that the committees function effectively, general industrial relations in a plant and in an industry must be satisfactory. Where grievances relating to working conditions exist, the workers are naturally too much concerned with such grievances to give attention to other matters. Furthermore, if once established, the machinery is to work, there must be a genuine sincerity of purpose on the part of both groups. Both labour and management must have due regard for the just rights of the other. After all, in this respect, machinery for labour-management co-operation is no different from any other machinery governing the relations of man. It will work if both parties to industry are sincere in their desire and efforts to make it work."

On the same program Mr. Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, said:

"Wherever they have been operating and functioning as they were intended to, labour-management production committees have justified themselves and provided an example of what might be done on a larger scale where the brains of industry were pooled for the general welfare."

Another speaker, Mr. Pat Sullivan, Secretary-Treasurer of the Trades and Labour Congress of Canada, stated that:

". . . . . these committees, if properly constituted, could play an important role in discussing with management and government the question of transition from war-time production to peace-time production."

Brigadier General R. H. Bedell, personnnel director for Fairchild Aircraft Ltd., Montreal, also took part in the program and stressed the fact that:

". . . . a spirit of good faith, understanding, and mutual co-operation is the greatest single element that will make or break committees of this kind. A joint production committee functions to real advantage only when all concerned resolve to make it function."

Mr. J. Clark Reilly, General Manager of the Canadian Construction Association, concluded his remarks on the program by stating that joint production committees "should be organized for the purpose of producing better industrial relations, mutual confidence, and well organized, happy units in our national industrial life."

*Maritime Labour Institute Formed Following Trade Union Course**

Institute of Public Affairs, Dalhousie University Sponsors Trade Union Education Project

A new venture in Canadian trade union education has recently been undertaken in Halifax by Dalhousie University, through its Institute of Public Affairs, in the inauguration of the Maritime Labour Institute.

Formation of the Labour Institute was the result of action taken by Maritime trade union officials attending the first course in labour relations, held at Dalhousie University during the week of March 27, 1944. This course, which brought together more than 65 delegates, representing all major unions in Nova Scotia and New Brunswick, was organized by the Institute of Public Affairs in conjunction with a Trade Union Advisory Committee, and with financial assistance from the Nova Scotia Department of Labour. It has also received the endorsation of the Canadian Congress of Labour and the Trades and Labour Congress of Canada.

A number of distinguished experts from Canada and the United States addressed the delegates on various phases of labour problems. Boris Shishkin, of Washington, Chief Economist of the American Federation of Labour, spoke on the question of *Wage Determination.* Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, discussed *The Functions and Responsibilities of Trade Unions,* and B. S. Keirstead, of McGill University, addressed the group on *The Impact of the War on the Maritime Economy.* F. A. Magoun, of the Massachussets Institute of Technology, spoke on *Human Relations in Industry,* and L. Richter, of Dalhousie University, on *Social Security.* G. A. McAllister, of the Dalhousie Institute of Public Affairs, dealt with *New Legislation Affecting Labour.* To each topic was allotted a whole day. After the opening address each morning the students split into four groups which discussed the subject among themselves and formulated a number of questions. They were submitted in writing to the speaker as well as to the other groups and formed the background for the further discussion which extended as a rule over the whole afternoon.

The Committee responsible for arrangements for the course was under the chairmanship of Professor L. Richter, of Dalhousie University, joint Vice-Chairmen were Hugh Henderson, Vice-President of the Halifax District Council, Trades and Labour Congress of Canada, and Pat Shea, President of the Halifax District Council of the Canadian Congress of Labour.

Other members of the Committee included:

Fred E. Bingham—United Automobile Workers, Aircraft Division, Dartmouth.

Charles Murray—Industrial Union Marine and Shipbuilding Workers of Canada, Halifax.

Fred J. Murphy—Journeymen Plumbers and Steam Fitters, Halifax.

Fred J. Ibsen—United Brotherhood of Carpenters and Joiners, Halifax.

J. McLean—Allied Trades Council, H.M.C. Dockyard, Halifax.

Ralph L. Wade—International Brotherhood Pulp, Sulphite and Paper Mill Workers, Edmundston.

Frank H. Gillespie—General Chairman of the Canadian Brotherhood of Railway Employees, Moncton.

James Nicholson—United Steel Workers of America, Sydney.

George Baker—United Mine Workers of America, District 26, Glace Bay.

G. A. McAllister—Institute of Public Affairs, Dalhousie University—Secretary.

Desire for the continuation of the work commenced during the course led to the inauguration of the Maritime Labour Institute as a permanent organization affiliated with the Dalhousie University Institute of Public Affairs. In a resolution passed by the union delegates it was declared to be the purpose of the Institute:

(*a*) to continue and expand the functions of the Trade Union Advisory Committee which had been in charge of the preparation for the course.
(*b*) to organize and conduct similar courses on matters of interest to trade unions;
(*c*) to maintain and make available a library of information on matters pertinent to trade unions;
(*d*) to engage in research on all matters pertaining to labour; and to
(*e*) further in any way the education of labour with respect to economic and social matters.

Delegates were welcomed at the opening session of the course by Hon. L. D. Currie, Nova Scotia Minister of Mines and Labour and by Dr. Carleton Stanley, President of Dalhousie University. Mr. Conroy, chief speaker for the first day, stressed the fact that labour could only fulfill its function by assuming full partnership in Canadian society.

According to Mr. Conroy, labour must acquire sound knowledge not merely to do its own job or better its own position, but also in order to make a contribution to the improvement of society. The speaker regarded the development of character in the union movement as of first importance, for without it no lasting results could be achieved. With the growth of character in the unions, labour would develop a long-term perspective and become part of the fabric of society. A first essential, according to Mr. Conroy, was that labour establish itself in public affairs.

F. A. Magoun, Professor of Human Relations at M.I.T. in Boston, stressed the need for developing attitudes which would make co-operation between management and labour possible. Cooperation can result only if four fundamental conditions exist, according to Professor Magoun. The parties concerned must have self respect; a continuing and healthy understanding of how their own desires and performance affect and are affected by the desires and performance of others; confidence in the availability of and the effectiveness of good method in working out acceptable solutions for the inevitable disagreements that arise; and acceptance of responsibility for results. Conflicts may arise through lack of understanding, insincerity, and holding on to emotional grievances from the past.

Dr. L. Richter, during his discussion of *Social Security,* made public for the first time the results of research on the effect of health insurance on the existing system of medical care. This research was carried on at Dalhousie University by the Institute of Public Affairs with the assistance of the Rockefeller Foundation. He also discussed principles of social security and current trends in Canadian legislation in this field.

George A. McAllister presented an extensive analysis of the Wartime Wages Control Order and the Wartime Labour Relations Regulations, which he described as "cornerstones of the government's national wartime policy". He stressed the fact that the curtailment of industrial unrest by the new labour code would depend on the wisdom of administration by the Wartime Labour Relations Board. With reference to wage control, Mr. McAllister emphasized the importance of the Order in relation to the necessity for wage and price stabilization, the adjustment of inequalities, and the national effort to avoid inflation.

Boris Shishkin dealt at great length with principles and problems involved in wage determination. He stressed the importance of research in enabling labour's representatives to have a thorough knowledge of national and international factors affecting conditions in a particular industry at a particular time. The speaker emphasized that workers' standard of living is far more dependent upon monthly and yearly earnings than upon hourly wage rates. Full employment should, therefore, be the main goal for labour as well as for the nation as a whole.

Professor Keirstead spoke at the last day of the course and pictured the economic background for the labour problems discussed at the previous session. He examined the question how much of the economic gains made in the Maritime Provinces during the war was likely to be retained in the post-war years. He reviewed various industries in the Maritime Provinces and assessed their prospects for further development. In that connection, the situation of the Nova Scotia coal and steam industry came up for a thorough review.

* The LABOUR GAZETTE is indebted to Dr. L. Richter, Secretary-Treasurer of the Institute of Public Affairs of Dalhousie University, Halifax, N.S. for this outline of the organization of the Maritime Labour Institute.

Henry Ford Pledges Jobs to Ex-service Men

In a letter to the headquarters of the Office of War Mobilization in Washington and published on April 18 in the New York Times, Mr. Henry Ford pledged job preference for war veterans in Ford Motor Company plants after the war.

The following is a quotation of a portion of Mr. Ford's letter.

> "There have been many discussions recently about what we are going to do for the men returning from war.
>
> "It looks to us as if the natural thing to do when we start to work on a civilian basis again is to give the service men preference. We intend to do this in our plants, and we hope that other employers will do the same.
>
> " . . . They deserve the first call. As far as we are concerned, all they have to do when we are ready to start producing cars again is to come in and go to work. We want them all back with us."

Ford officials have reported that 25,000 former Ford workers are now in the Army and Navy.

Decisions of National War Labour Board

Railway Employees' Application Submitted

UNDER the Chairmanship of the Honourable Justice M. B. Archibald, the National War Labour Board, convened in Ottawa on May 4, 5 and 6, heard the evidence in connection with the application of the Employees' Negotiating Committee on behalf of certain classes of railway employees, members of the following Unions:

Brotherhood of Locomotive Engineers; Brotherhood of Locomotive Firemen and Enginemen; Order of Railway Conductors of America; Brotherhood of Railroad Trainmen; The Order of Railroad Telegraphers; Commercial Telegraphers' Union; Brotherhood of Railway and Steamship Clerks; Freight Handlers, Express and Station Employees; International Association of Machinists; International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America; International Brotherhood of Blacksmiths, Drop Forgers and Helpers; Sheet Metal Workers' International Association; International Moulders' Union of North America; United Association of Journeymen Plumbers and Steamfitters of the United States and Canada; International Brotherhood of Electrical Workers; Brotherhood Railway Carmen of America; International Brotherhood of Firemen, Oilers, Helpers, Round House and Railway Shop Labourers; Brotherhood of Railroad Signalmen of America.

The purpose of the application was:

(1) To obtain for the running trades classifications (engineers, firemen, conductors, trainmen, yardmen, etc.) an increase in existing basic wage rates to the extent necessary to equalize Canadian rates with rates paid for comparable service in the eastern United States, plus any amount by which such rates may be increased as a result of negotiations and hearings being conducted in the United States at that time.

(2) For all other classifications involved, an increase in basic wage rates of 23 cents an hour.

The following railway companies were the employers concerned in the application:

Algoma Central & Hudson Bay; Canadian National and Subsidiaries; Canadian Pacific and Subsidiaries; Dominion Atlantic; Essex Terminal Railway; Northern Alberta; Pacific Great Eastern; Sydney & Louisburg; Temiscouata Railway; Temiskaming & Northern Ontario; Toronto, Hamilton & Buffalo; Quebec Central; Toronto Terminals; Esquimalt and Nanaimo.

Comprehensive briefs and exhibits were filed by both parties. On the ground that new evidence was submitted in the negotiating committee's rebuttal brief, the Companies filed a statement in reply and to this, the Committee is to be permitted to file a further rebuttal. The Board's decision will be deferred pending the submission of such material.

List of Decisions

The National War Labour Board recently issued decisions in the following cases:—

Hudson's Bay Company.

Provincial Paper Limited, Port Arthur, Ont.

Metal Trades Section of the Canadian Manufacturers' Association at Vancouver, B.C., and Moulders and Foundry Workers' Union, Local No. 1.

Shawinigan Falls Terminal Railway Company and Committee of its Operating and Maintenanec Employees.

Canadian Johns-Manville Company, Limited, Asbestos Corporation, Limited, and Johnson Asbestos Company, and National Catholic Asbestos Syndicate, Inc.

Surrey Co-operative Association, Cloverdale, B.C.

Medalta Potteries Limited, Medicine Hat, Alta., and Clay Product Workers' Union, Local No. 2.

L'Association des Constructeurs de Quebec Inc. and Le Conseil des metiers de la construction des Syndicats nationaux catholiques de Quebec.

Robert Soper Limited, Hamilton, Ont.

Revelstoke Sawmill Co., Limited, Calgary, Alta.

General Steel Wares Limited, Montreal, Que., and United Steel Workers of America, Local 2847.

Crescent Creamery Company Limited, Winnipeg, Man.

MacDonald Bros. Aircraft Limited and Mid-West Aircraft Limited, Winnipeg, Man., and International Association of Machinists, Lodge 741 and 764.

New Brunswick Power Company and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 1182.

Provincial Transport Company and Amalgamated Association of Street, Electric Railway Employees and Motor Coach Operators of America, Local 1157, and the Canadian Brotherhood of Railway Employees and Other Transport Workers.

Re: Hudson's Bay Company

Reasons for Decision

This appeal is from a decision of the Regional Board for British Columbia who held that the company's store managers at Nelson, Vernon and Kamloops were above the rank of foreman and their remuneration governed by the Salaries Order, P.C. 1549. The question so determined was in reality ancillary to an application, presumably under section 44 of P.C. 5963, for permission to pay cost of living bonus to the employees concerned.

Under the principle governing the determination of this type of case, we must ascertain the nature of the duties and responsibilities of the company's store managers. The Regional Board rested its decision principally upon the presence in each store of a classification called "keymen" to whom it gave the rank of foremen and as a consequence the managers were considered to be above that rank. The "keymen" are not foremen, in our view, but senior sales clerks with a few employees under their supervision. They are like lead or charge hands in an industrial plant. Also, we do not think that the duties described by the company are of an executive character.

We are of the opinion that the appeal should be allowed. The question of cost of living bonus is left for decision by the Regional Board under the provisions of P.C. 5963.

April 6, 1944.

Re: Provincial Paper Limited (Port Arthur, Ontario)

Reasons for Decision

An appeal from the Ontario War Labour Board in respect of an application for permission to increase the piece-work rate for pulpwood cutters in one of the company's camps in the Thunder Bay District.

The Regional Board has dealt in a comprehensive manner with wages and working conditions in the pulpwood industry in the province of Ontario by a general finding and direction dated July 8, 1943. The basic rate for 8′ rough spruce and balsam was set at $2.40 per single cord. The company says that the rate does not permit experienced cutters at this particular camp near Wolfpup Lake to make reasonable earnings and it seeks approval of a 75 cents increase "to apply only for timber in which the experienced cutters as a group cannot average two single cords per day or better."

Special rates "to cover abnormal operations" were contemplated in the Regional Board's general order (paragraph 16). In this instance, the operator says that the bush is scattered and limby. The Committee set up to advise the Regional Board on matters pertaining to the pulpwood schedule in the Thunder Bay District recommended approval of the application, but the Board felt that there were not sufficient abnormality in the conditions alleged to justify a special rate.

If we were to allow this appeal, we would be taking the view of the Advisory Committee as against that of the Regional Board; in effect, on a question of pure fact, we would be giving ourselves a discretion exercised in the first instance by a Board whose knowledge of the conditions prevailing in the pulpwood industry we take to be amply demonstrated by the contents of its general finding and direction.

Our disposal of this appeal is perhaps made easier by the fact that a general conference of the pulpwood industry is called by the Regional Board for April 18 and 19 next. We can fairly assume that the effect of abnormal bush conditions on cutting rates will be reviewed in a general way, from the point of view primarily of wage stabilization and also of the industry as a whole.

In the circumstances, the appeal will be dismissed.

April 6, 1944.

Re: Metal Trades Section of the Canadian Manufacturers Association at Vancouver, B.C., and Moulders and Foundry Workers Union, Local No. 1

Reasons for Decision

Following a rehearing of this matter, we have come to the conclusion that our decision of September 24, 1943 (Dominion Labour Service 38-1061; 43 LABOUR GAZETTE p. 1352) must be rescinded and the appeal from the British Columbia Board dismissed. By so doing, we are exercising a power conferred upon us by section 58 (1) of P.C. 5963.

Our prior decision allowed an appeal from the British Columbia Regional Board and increased hourly rates for moulders and coremakers, electric furnacemen, acetylene burners and welders, electric welders and machine moulders to 96 cents. That decision was designed to stabilize rates to the level of those said to be paid in certain foundries above the general prevailing rate of 90 cents per hour and as well to eliminate certain "back door incentive bonus schemes" which were claimed to be the source of much dissatisfaction to the workers. We were of the opinion from the evidence that the higher rates being paid in some of the foundries had already been authorized by the Regional Board and that the so-called "back door incentive schemes" were unauthorized and designed to evade the Wages Control Order.

Later we gave leave for a re-hearing when it became apparent to us that the evidence adduced on the original appeal had possibly had the effect of leading us to a false conclusion. It then became evident that some at least of the higher rates were unauthorized and that certain of the incentive schemes previously described as "back door" had been properly authorized by the Regional Board.

Accordingly we appointed a referee to investigate conditions on the spot and confer with the Union and the owners. We now have the benefit of his report. From it we must conclude that the basis of our first decision was erroneous. It is apparent that some unauthorized rates are being paid and that there has been some manipulation of classifications having the objective of evading the provisions of the Wages Order. Generally speaking, however, the prevailing rate for the classifications in question is 90 cents per hour.

With the much broader picture of conditions before us now, we think the Regional Board exercised a proper discretion and the original appeal should have been dismissed. Accordingly we make that order now with the additional provision that increases paid pursuant to our former order cease to have effect on the first payroll period beginning after April 15 next.

In our view the new evidence obtained and particularly the Referee's Report justifies the reversal of our former decision in accordance with the principles enunciated in the Port McNicoll Freight Handlers' Case (Dominion Labour Service 38-1044; 43 LABOUR GAZETTE p. 1262).

Before parting with the matter, we should like to observe that wage conditions in the foundry industry are most unsatisfactory due in large measure to certain employers increasing wages without authority and classifying without proper justification to try to evade the Wages Control Order. It may be that the Regional Board will deem it advisable to make some investigation with a view to determining whether some prosecutions should be recommended.

April 5, 1944.

Re: Shawinigan Falls Terminal Railway Company and Committees of its Operating and Maintenance Employees

Reasons for Decision

This is a joint appeal in respect of the effective date of a decision of the Quebec Regional Board approving an application for wage increases.

The original formal application was made by the employees under date of December 9, 1943. This was followed by negotiations and, on January 29, 1944, by a joint application by the company and the employees. It requested that October 1, 1943, be the effective date. The Regional Board made January 29, 1944, the effective date for the reason that it was the date of application.

The date chosen by the Regional Board was, it is true, the date of the application dealt with, but we do not think that the employees should be denied retroactivity to the date of the original application which put the process under way. There is no ground, however, for retroactivity to October 1, 1943.

Consequently, we allow the appeal and the Regional Board's finding and direction will be effective from December 9, 1943.

April 13, 1944

Re: Canadian Johns-Manville Company, Ltd., Asbestos Corporation, Ltd., and Johnson Asbestos Company and National Catholic Asbestos Syndicate, Inc.

Reasons for Decision

These are applications by the Syndicate for general wage increases, wage adjustments and alterations in certain working conditions. The demands made are not altogether uniform. In fact there were two hearings, the cases against Asbestos Corporation, Ltd., and Johnson Asbestos Company being heard together and the case against Canadian Johns-Manville Company being heard separately. In the view we have taken of the matter all three cases can be dealt with together.

The applications were all brought under P.C. 9384. As this is the first time we have given reasons in writing in a case under the new Order in Council, we think it advisable to elaborate to a greater extent than we would have done had they been brought under P.C. 5963, the former Wage Control Order.

We might point out that in our opinion the Syndicate has not developed the case as it could have been developed under the terms of the Order in Council. That is a matter easily understood as this is a first attempt. We do not propose to deal with it in a techincal fashion except in so far as that is necessary in doing justice to the employers.

On the question of adjustments asked, we feel we must rule against the Syndicate on the ground that no real attempt has been made to establish any gross injustice or gross inequality. All that has been submitted is a statement of the adjustments asked without any demonstration that it is based upon comparison of the value of the work, the comparative skill required or any of the factors that are of importance in job evaluation. A gross inequality is not proved by merely stating that it exists. We must have evidence on which we can form a conclusion—it would be quite unfair and improper to proceed on guess work even if the parties both agree that some adjustments might well be in order.

Evidently the Syndicate and the Companies have been following a custom for some years of doing a rough job evaluation prior to the signing of new yearly contracts. Adjustments have been agreed upon in the past and have been approved by the Board. No really scientific job evaluation has been attempted and that is probably what should be done now if the recent amendments to P.C. 9384 had not had the effect of practically abolishing such methods. In the majority report of the Board following the public inquiry, it was recommended that the Board should have the power to reduce unsound wage rates. Such power was given under P.C. 9384 but was taken away by subsequent amendment. The recommendation in the majority report was made in contemplation of the process of job evaluation. The very nature of the job evaluation is such that reductions and increases will take place according to the comparative value of the work required to be done. Our experience indicates that but rarely have wages been lowered as the result of job evaluation: in the great percentage of cases they have been increased. However, it is most unlikely that an employer will consent to evaluation with the dice loaded against him by an Order in Council which does not permit the Boards to authorize reductions in the cases of wages established by comparison to be scientifically unsound. It may well be that certain friends of labour did labour no good turn when they prevailed upon Council to remove the power originally given under P.C. 9384. Be that as it may it is within the bounds of possibility that the Companies herein concerned will agree with the Syndicate to a job evaluation and present results to the Board to be approved at a later date. On this particular application at this stage we can give no effect to the petition of the Syndicate for adjustments.

The next question is that of the request for a general increase on the grounds of gross inequalities or gross injustice. In the case of Johns-Manville, the application is for increase of 10 cents per hour; in the case of the other two Companies it is for 12½ cents per hour.

The Syndicate endeavoured to establish a case of inequality based on comparison with Eldorado Gold Mines, International Nickel and Hudson Bay Mining and Smelting Company. No evidence was introduced to establish that there was any real similarity of operation. Put in the bald general way the case was presented, it is akin to comparing a grocery store with a hardware store. Some classifications in the Asbestos Mines have similar names to classifications in the Nickel Mines, but that in itself spells exactly nothing. Certainly to establish an inequality one must find a comparison. An inequality arises when something is not equal to something else. But there must be a reasonable degree of similarity between the things sought to be compared. P.C. 9384 cannot be construed to level off wages in the mining industry generally throughout the whole country. That would

be a far cry from the stabilization of wages. In our view no case of gross inequality was made out.

As to whether there is involved here a gross injustice is another matter. In a general broad way it may be said, keeping in mind human requirements, that the wages are low. Certainly they are not high. The question is, taking into consideration the financial position of the Companies and their earnings and wages generally, whether the worker is enduring an injustice, a gross or manifest injustice—one that calls for remedy in the circumstances.

Two of the Companies did not set up any defence of ability to pay. From that we must assume that with them the question does not arise. The other Company did set up the defence, we think unsuccessfully as far as part at least of the demands of the Syndicate is concerned.

Wages are a first charge on industrial operations. The wage earner must have priority over the shareholder although the latter is not to be denied a reasonable return. Certainly the wage earner is entitled to a reasonable wage in priority if earnings justify it. Otherwise he is the victim of a gross injustice. We think that is the case here. Each case presents its own particular problem and some delicacy of balance is required between the rights of the wage earner and the rights of the shareholder. Also the reasonable security of the property must be kept in mind if the worker is to enjoy continuity of working opportunity. In these cases in our view the ends of justice will be served presently if we direct a general increase of 4 cents per hour. This brings up the question of adjustments of contract rates and piece rates. We rely on the good sense of the parties to prevail in these matters having in mind that it is our intention that all rates should be increased so as to bring all workers represented by the Syndicate in the operations of the three Companies an extra 4 cents hourly. The various changes requested in working conditions were not particularly emphasized before us. We rather gathered the impression that if the question of general increase was settled the parties could agree on the other matters and forward a joint application for approval.

There will be finding and direction providing for the general increase herein awarded, effective January 1, 1944.

April 13, 1944

Re: Surrey Co-operative Association (Cloverdale, B.C.)

Reasons for Decision

The appellant is a consumers' co-operative established by farmers for the purchase of supplies. It appeals from a decision of the British Columbia Board refusing permission to inaugurate a new practice, namely, to allow the employees to participate in net yearly receipts on the basis of their earnings along with the members who share on the basis of their purchases. Distribution is made in "shares" redeemable in cash.

The application can only be viewed as being one for a general wage increase. On that basis, the Regional Board did not see fit to grant the application because no case had been made out under section 20 (*a*) of P.C. 9384. We agree with the decision and we think further that the basis upon which the increase would operate is quite inconsistent with the purpose of wage control.

We must therefore dismiss the appeal.

April 13, 1944

Re: Medalta Potteries, Limited (Medicine Hat, Alberta) and Clay Products Workers' Union, Local No. 2

Reasons for Decision

This is an application by way of appeal from a decision of the Regional War Labour Board for Alberta refusing a general wage increase.

We must consider the appeal under the previous Order P.C. 5963 and find our jurisdiction in section 25 of that Order, that is, we are bound to a comparative examination of wage rates in the industry concerned. On the whole and perhaps because of the nature of its production, pottery making is a relatively low-wage industry. If we were to restrict comparisons within the locality, we could hardly give any relief in this case. But, as was indicated in the Steel decision (Dominion Labour Service 38-1015 at 1019; 43 LABOUR GAZETTE, page 439 at page 442), there is no boundary restriction contained in the prescriptions of section 25 and we have taken a rather broad view of the industry and have examined the rates paid in plants located in other parts of the country.

The Regional Board was obviously impressed by the problem of financial ability to pay the increases requested. These increases range from 10 to 15 cents per hour and it was obvious to the Regional Board that the company could not survive under the added cost

of the wage demands made by the Union. After a survey conducted for us on the ground by a representative of this Board, we find that, apart from low wages, physical working conditions in the plant are far from being satisfactory. The employer is perhaps insufficiently aware that an uncomfortable working environment has an effect upon production and also that productive efficiency reflects itself in the financial statements. However, on this subject, we are without jurisdiction. The matter is one for the provincial authorities. Our authority is restricted to wages and working conditions related to the remuneration of the workers.

Our conclusion is that the minimum starting rate (exclusive of cost-of-living bonus) should be 30 cents for both males and females, with automatic increases to 35 cents after 90 days and 38 cents after 6 months of employment. All classifications above this minimum rate should receive an hourly increase of 3 cents. This may require a certain number of adjustments. We urge the parties to agree upon these and present them to the Regional Board for approval.

There will be a finding and direction accordingly and the increases will be effective from the first payroll period commencing after February 1, 1944.

April 13, 1944

Re: L'Association des Constructeurs de Québec Inc. and Le Conseil des métiers de la construction des Syndicats nationaux catholiques de Québec

Reasons for Decision

L'Association des Constructeurs de Québec, Inc. appeals from a decision of the Quebec Regional Board dated December 22, 1943. The application was under the provisions of P.C. 5963 for an hourly increase of 10 cents for all workers in the building trades within the territorial jurisdiction of decree No. 1653 passed under the Quebec Collective Agreement Act. This territory includes the Quebec Judicial District and a number of neighbouring counties.

In allowing the application the Regional Board based its decision upon section 25 of the former wage control order: that is, it found that the increase was justified by a comparative examination of the rates paid in other localities, notably in Montreal.

This decision does, as was argued by the appellant, modify in a serious respect a collective agreement extended under provincial legislation and in a manner which is not contemplated by the Quebec Collective Agreement Act. However, because of the paramountcy of the Order in Council controlling wages in wartime, the system of collective bargaining provided in the Act is for practical purposes suspended in the field of wages.

On the merits, we must say that the Regional Board does not appear to have erred in exercising its discretion under the Order in Council.

We must dismiss the appeal.

April 13, 1944

Re: Robert Soper Limited (Hamilton, Ontario)

Reasons for Decision

This is an application for leave to appeal from a decision of the Ontario Regional Board allowing as from January 1, 1944, an application made after the fact (January 1, 1942) for approval of the establishment of a new occupational classification and of a wage rate therefor. The only question involved is that of the effective date of the Regional Board's order, a matter which in most cases is a purely discretionary one. There does not appear to be any ground upon which it could be argued that the Regional Board had exercised its discretion in an improper manner.

The application will be denied.

April 20, 1944.

Re: Revelstoke Sawmill Co., Limited (Calgary, Alberta)

Reasons for Decision

This is an appeal from a decision of the Alberta Regional Board under P.C. 5963.

The application was for approval of an increase of salary for the company's manager at Medicine Hat. The Regional Board considered the matter in the light of section 25 of P.C. 5963 and refused the application because, in their opinion, there was no justification for the increase on what they considered to be a proper comparable basis. Although the current wage control order is P.C. 9384, the present application had to be dealt with by the Regional Board under P.C. 5963 because it had been received prior to December 9, 1943 (see paragraph 5 (1) of P.C. 9384), and in considering appeals in such cases, this Board also must give effect to the provisions of the prior order.

The Board, on more than one occasion, has expressed the view that we would not interfere with the decision of a Regional Board in a case where the latter had exercised its discretion under section 25, unless there was evidence before us of an error of principle or of a fundamental error in appreciating the facts. The manner in which that proposition was put in the General Motors decision of February 1, 1944 (Dominion Labour Service 38-1093; 44 LABOUR GAZETTE p. 273) is applicable, we think, to the present case:

"At any rate the difficulty that we find ourselves in is, that sitting as a Court of Appeal, in order to change the decision of the Regional Board we must reach the conclusion that that Board has erred in some matter of principle, and not purely and simply in its estimation of the facts. In giving reasons for its decision the Regional Board points out that, in its opinion, the rates presently being paid are fair and reasonable for the particular locality, taking all things into consideration. It may be that had we been sitting on the case, we may have taken another view, but that does not justify us in going behind well established principles that apply to cases coming before us on appeal."

We must therefore dismiss the appeal.

April 20, 1944.

Re: General Steel Wares Limited (Montreal, Que.), and United Steel Workers of America, Local 2847

Reasons for Decision

This is an appeal by the Company from a decision dated November 10, 1943, confirming a prior decision dated October 27, 1943, of the Quebec Regional Board, on wage rates for female machine operators. The matter is to be decided under the provisions of P.C. 5963.

The application was for a range of 31 cents to 40 cents with automatic increases spread over a period of one year. The Company replied by agreeing to a range of 31 cents to 38½ cents spread over a period of two years. The Regional Board thought it had dealt with the matter by authorizing the Company's proposal. Then, upon representations from the Union, the Regional Board issued a direction to the Company to pay the 31–40 range from October 21, 1943, without specifying periodic increases. This was done without further notice to the Company, who subsequently filed further written representations. The Regional Board later sustained the prior decision.

After hearing the evidence, the Board consulted an analysis of wage rates in comparable industries in the Montreal area and on this information we think the direction of the Quebec Board must be confirmed and the appeal dismissed.

The finding and direction should, however, provide for automatic increases as applied for.

April 27, 1944

Re: Crescent Creamery Company, Limited (Winnipeg, Man.)

Reasons for Decision

This is an application for leave to appeal from decisions dated February 16 and March 8, 1944, of the Manitoba Regional Board refusing the greater part of salary increases to three of the Company's supervisory staff. Leave to appeal was denied by the Regional Board.

This is another of the many cases in which we are asked to replace a Regional Board's view of comparable rates by our own. We have on numerous occasions laid down the rule that we would not assume that function when dealing with appeals. Within the sphere of regional employment, the provincial boards are vested with the duty and responsibility of administering the Wages Control Order. The Order confers a large measure of discretionary authority and we do not interfere with an exercise of the power unless it is shown to have been made improperly.

On this application, the Company's solicitors stress that no opportunity was given to present a verbal argument in addition to the full written submissions filed in support of the increases. The Regional Board was master of its proceedings and the Order provides no right to a hearing.

We must dismiss the application for leave.

April 27, 1944

Re: MacDonald Bros. Aircraft Limited and Mid-West Aircraft Limited (Winnipeg, Manitoba) and International Association of Machinists, Lodges 741 and 764

Reasons for Decision

These applications were made by the Association under the former Wages Control Order (P.C. 5963) for wage increases to journeymen, production workers, inspection and maintenance staff, and also for the elimination of some lower paid classifications. Applying section 25 of the Order, the Regional Board for Manitoba denied the applications on the ground that upon what it considered to be a proper comparison, the rates being paid could not be said to be "low".

On the appeals it was argued that the Regional Board had erred in adopting a too narrow comparative base and refusing to equalize aircraft rates in the Winnipeg area with those prevailing, for instance, on the Pacific Coast or at Edmonton.

The Companies argued that their rates compare well with those paid by other similar plants in Western Canada and that there was no justification for an increase under the governing section.

Evidently, the Regional Board was careful of the effect of these applications upon the entire wage situation under its jurisdiction. In any event, we find support for the rates under review not only on a purely local, but on a fairly broad comparison in the aircraft industry as well.

Our conclusion is that there is no reasonable ground for interfering with the Regional Board's decisions and we must dismiss the appeals.

April 27, 1944.

Re: New Brunswick Power Company and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 1182

Reasons for Decision

(Oral Decision)

On the facts and evidence before it the Regional War Labour Board has made a finding that the operators were entitled to an increase in their scale of wages. The said Regional War Labour Board did not, however, make a finding that the other employees of the Company were entitled to any increases in their wage rates—no gross inequality or gross injustice having been shown with respect to the wages paid such employees.

These decisions and findings of the Regional War Labour Board were based purely on questions of fact, and in the circumstances of this case we see no reason why these findings and decisions should be disturbed. The appeal should, therefore, be dismissed.

April 26, 1944.

Re: Provincial Transport Company and Amalgamated Association of Street, Electric Railway Employees and Motor Coach Operators of America, Local 1157, and the Canadian Brotherhood of Railway Employees and Other Transport Workers

Reasons for Decision

(Oral Decision)

Without hearing any additional arguments and without calling on anyone for further comments, the Board dismisses this appeal.

It is apparent that the question of the amount of cost-of-living bonus was fully dealt with by the Regional Board.

This Board sees no reason why it should disturb the findings of the Regional Board which had before it all the facts relevant to comparable industries.

This appeal should be dismissed.

April 26, 1944.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Proceedings under the National Labour Relations Board, the Industrial Disputes Investigation Act, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Wartime Labour Relations Regulations.—Under the Wartime Labour Relations Regulations, P.C. 1003, the Government has extended its jurisdiction over employer-employee relations which are normally exclusively within the provincial field, to the extent considered necessary to cover adequately employers and employees in industries "essential to the efficient prosecution of the war", but without attempting to include other industry which has not a direct bearing on war production. In so far as these latter industries are concerned, each province can make its own decision as to whether or not they shall be brought under the regulations.

Provision is made in the regulations for an agreement between the Dominion and any province to set up suitable provincial agencies for the administration of the regulations. Such agreements were made during the month under review with the provinces of Ontario, British Columbia, and New Brunswick, and were approved under the provisions of Orders in Council P.C. 2911, for Ontario, P.C. 3062, for British Columbia, and P.C. 3455 for New Brunswick. (See also pages 610-19 of this issue).

Recent Proceedings under the Industrial Disputes Investigation Act.—This article gives an account of all applications for Boards of Conciliation and Investigation, and the disposition of these applications. In cases where Boards are established, the LABOUR GAZETTE publishes in due course the full text of their reports, as submitted to the Minister of Labour.

Since the outbreak of war and the extension of the Industrial Disputes Investigation Act to cover disputes in war industries, the number of applications for Boards of Conciliation and Investigation has greatly increased. In recent months the majority of applications for Boards have been referred to Industrial Disputes Inquiry Commissioners for preliminary investigation, to determine whether the circumstances warrant the establishment of a Board. Reports of Commissioners appointed under the Act are summarized in this article.

Disputes which concern wage demands come under the jurisdiction of the National and Regional War Labour Boards.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published monthly in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1943 appeared in the LABOUR GAZETTE for March, 1944.

The latest available information as to strikes and lockouts in Great Britain and other countries appears from month to month.

8115—5

Recent Proceedings under the Wartime Labour Relations Regulations

DURING the month of April four applications for certification were granted by the Wartime Labour Relations Board (National). These were:

1. Canadian Brotherhood of Railway Employees and Other Transport Workers and Montreal Tramways Company, Montreal, P.Q., Certified April 13, 1944.

Following 10 days' notice given by the certified bargaining representatives to the employer as required by Section 10 of the Regulations, the bargaining representatives advised the Board that they believed that an agreement would not be completed in a reasonable time and asked the Board to intervene.

The Minister of Labour thereupon on April 27 appointed Mr. J. S. McCullagh, Department of Labour, Ottawa as Conciliation Officer in accordance with Section 12 (1) of the Regulations.

2. United Steelworkers of America and Lighting Materials Company, Winnipeg, Man. Certified April 26, 1944.

3. Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 279, and Ottawa Electric Railway Company, Ottawa, Ont. Certified April 27, 1944.

4. International Union, United Automobile, Aircraft and Agricultural Implement Workers (U.A.W.-C.I.O.), Local 200 and Ford Motor Company of Canada, Ltd., Windsor, Ont. Certified April 28, 1944.

Cases Investigated and Decision Pending

At the end of the month there were nine cases concerning which reports of Investigating Officers had been received and the decision of the Board was pending, following preliminary consideration by the Board. These cases, together with the Investigating Officer concerned, are:—

1. Canadian Brotherhood of Railway Employees and Other Transport Workers and Provincial Transport Company—F. LaFortune. Representation vote to be taken by consent.

2. National Syndicate of Electric Power Employees of Shipshaw and the Aluminum Power Company, Shipshaw, P.Q.—L. Pepin. Representation vote to be taken by order of the Board.

3. Canadian Brotherhood of Railway Employees and Other Transport workers and the Canadian Pacific Railway Company, Toronto, Ont., (Ticket Sellers, Union Station, City Office and Royal York)—J. P. Nicol.

4. Catholic Syndicates of Joliette, Quebec, and Joliette Steel Ltd., Joliette, P.Q.—L. Pepin.

5. Application re Canadian Brotherhood of Railway Employees and other Transport Workers, Divisions Nos. 224 and 231 and the National Harbours Board, Halifax, N.S.—H. R. Pettigrove.

6. The Canadian Seamen's Union and the Canadian Pacific Railway Co., (S.S. *"Princess Helene"*) Saint John, N.B.—H. R. Pettigrove.

7. United Brotherhood of Carpenters and Joiners of America, Local 2308, and Kingston Shipbuilding Co., Kingston, Ont.—W. K. Bryden.

8. International Association of Machinists, Lodge 1758 and Johnson Wire Works, Ltd., Montreal, P.Q.,—F. LaFortune.

9. Plastic and Linoleum Workers' Local 677 (A.F. of L.) and the Dominion Oilcloth & Linoleum Company, Ltd., Montreal, P.Q.—B. Wilson.

Reports of Investigation to be Referred to Board

In two cases the reports of Investigating Officers had been received and were awaiting consideration by the next meeting of the Board.

1. The Canadian Air Line Pilots Association and Canadian Pacific Air Lines Ltd., Winnipeg, Man.—H.S. Johnstone.

2. The National Syndicate of Aluminum Workers of St. Joseph d'Alma. Inc., and the Aluminum Company of Canada, Ile Maligne, P.Q.—L. Pepin.

Applications Referred to Investigating Officer

At the end of month twenty-one applications for certification had been referred to departmental officers for preliminary investigation and report. These, together, with the name of each investigating officer concerned, are as follows:

1. Brotherhood of Railroad Trainmen and Canadian National Railways and Canadian Pacific Railway Company (Conductors)—C. W. Rump.

2. Employees' Welfare Board of the Hudson Bay Mining and Smelting Company Ltd., and the Hudson Bay Mining and Smelting Co., Ltd., Flin Flon, Man.—H. S. Johnstone.

3. United Gas, Coke & Chemical Workers of America and the St. Clair Processing Corp., Ltd. (Polymer Corp.) Sarnia, Ont.—F. J. Ainsborough.

4. Brotherhood of Railroad Trainmen and the Canada Car and Foundry Co., (Turcott

and Dominion plants), Turcott, P.Q.—R. Trepanier.

5. Deepsea & Inlandboatmen's Union of the Pacific B.C. Division (C.C.L.) and Park Steamships Ltd., Vancouver, B.C.—G. R. Currie.

6. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (A.F. of L. & T. & L.C.) and the Quebec Railway, Light Heat and Power Co., Ltd., Quebec, P.Q.—R. Trepanier.

7. B.C. Seamen's Union and the Canadian National Steamships Ltd., (Prince Rupert and Prince George)—G. R. Currie.

8. United Electrical, Radio & Machine Workers of America, Local 512, and Bakelite Plastics, Toronto, Ont.—H. Perkins.

9. Sodium Sulphate Workers Union, No. 2 and Horseshoe Lake Mining Co., Ltd., Ormiston, Sask.—H. S. Johnstone.

10. International Association of Machinists and Macdonald Bros. Aircraft Ltd., (Office and Stores Depts. of Robinson St. Division), Winnipeg, Man.—H. S. Johnstone.

11. United Steelworkers of America and the Steel Company of Canada (St. Ambroise St. plant), Montreal, P.Q.—R. Trepanier.

12. United Steelworkers of America and the Steel Company of Canada (Dominion Wire Works) St. Joseph St., Lachine, P.Q.—R. Trepanier.

13. United Steelworkers of America and the Steel Company of Canada (Notre Dame & Charlevoix Sts. plant) St. Henri, P.Q.—R. Trepanier.

14. Stelco Employees' Association and Steel Company of Canada, Ltd., Lachine, P.Q.—R. Trepanier.

15. Stelco Employees' Association and Steel Company of Canada, Ltd., (Notre Dame St. plant) Montreal, P.Q.,—R. Trepanier.

16. Association of Employees "Aircraft Division" and Canadian Car and Foundry Co., Ltd., Montreal, P.Q.—B. Rose.

17. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the National Harbours Board, Montreal, P.Q.—L. Pepin.

18. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the National Harbours Board, Quebec, P.Q.—L. Pepin.

19. Brotherhood of Railway and Steamship Clerks and Freight Handlers, Express and Station Employees and the Canadian Pacific Railway (clerical employees and freight handlers).—B. Rose.

20. Canadian Union of Asbestos Workers, Local No. 5 and Bell Asbestos Mines, Ltd., Thetford Mines, P.Q.—B. Rose.

21. Employees' Union of Wartime Metals Corp. (C.C.L.O. and Wartime Metals Corporation, Black Lake, P.Q.).—B. Rose.

Applications Referred to Provincial Administration

During the month, 14 applications were referred to provincial administration under agreements between the Dominion and Provincial Governments. Of these 12 were referred to British Columbia and 2 to Ontario.

Those referred to British Columbia were:

1. United Steelworkers of America and the Lawrence Manufacturing Co., Vancouver, B.C.

2. United Steelworkers of America and Western Steel Products Corp., Ltd., Vancouver, B.C.

3. Amalgamated Shipwrights, Joiners, Boatbuilders and Caulkers Local No. 2 and various shipyards, Vancouver, B.C.

4. United Steelworkers of America, Local 2765 and National Machinery Company, Ltd., Vancouver, B.C.

5. Independent Smelterworkers' Union and the Consolidated Mining & Smelting Co. of Canada, Ltd. (Tadanac & Warfield plants), Trail, B.C.

6. International Association of Machinists, Lodge No. 692 and Vivian Diesel & Munitions, Ltd. (Plants Nos. 1 and 2), Vancouver, B.C.

7. United Steelworkers of America, Local 3254 and Blair Iron Works, New Westminster, B.C.

8. United Steelworkers of America, Local 2952 and the Vivian Diesel & Munitions Ltd. (Vivian Engine Works), Vancouver, B.C.

9. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and Burrard (Vancouver) Dry Dock Co., Ltd., Vancouver, B.C.

10. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and Burrard Dry Dock Co., Ltd., North Vancouver, B.C.

11. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and North Van Ship Repairs, Ltd., North Vancouver, B.C.

12. Trail and District Smelterworkers' Union, Local No. 480 (C.I.O.-C.C.L), and the Consolidated Mining & Smelting Co. of Canada, Ltd., Trail, B.C.

Applications Referred to Ontario

1. International Brotherhood of Electrical Workers, Local B1023 and Port Arthur Shipbuilding Co., Port Arthur, Ont.

2. Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 279, and Eastview Bus Service, Ltd., Eastview, Ont.

Applications Recently Received

1. Montreal Packing Plant Employees' Federal Union, Local 66, and Eastern Abattoir Ltd., Montreal, P.Q.

2. United Steelworkers of America, Local 3272, and Western Steel Products Corp., St. Boniface, Man.

3. British Columbia Seamen's Union and Canadian National Steamship, Ltd., Vancouver, B.C.

4. Winnipeg Electric Employees' Federated Council, One Big Union, Winnipeg, Man., and Winnipeg Electric Company, Winnipeg, Man.

5. United Steelworkers of America, Local 3238, and Canadian Rogers Sheet Metal and Roofing Ltd., Winnipeg, Man.

Administration of Wartime Labour Relations Regulations— British Columbia, Ontario, and New Brunswick

THREE Orders in Council, approving agreements with the provinces of Ontario, British Columbia and New Brunswick under which the provinces assume responsibility for the administration of the Wartime Labour Relations Regulations in the case of all industries normally outside Dominion jurisdiction were announced recently. They are P.C. 2911, dated April 27, 1944, concerning Ontario, P.C. 3062, also dated April 27, 1944, concerning British Columbia, and P.C. 3455, dated May 9, 1944, concerning New Brunswick.

This means that the Wartime Labour Relations Board (National) will continue to have direct jurisdiction over those industries which came under the Industrial Disputes Investigation Act in peacetime, as well as—

(*a*) Where employees in more than one province, of the same employer, are affected; or

(*b*) Where employees in more than one province of several employers are affected, as provided for in subsection 3 of section 5 of the Wartime Labour Relations Regulations.

The provinces will administer the Dominion Regulations in their application to all other industries in the cases of Ontario, British Columbia, and New Brunswick.

In the provinces of Ontario and New Brunswick, Boards have already been established to administer the Federal Regulations in those industries where responsibility is now assumed by the provinces. In the case of British Columbia it is anticipated that the provincial administration will be directly under the Minister of Labour for the province.

The Orders in Council provide that either employer or employee or an organization of either employers or employees may appeal against any decision of the provincial authority, regarding the administration of the regulations, to the Wartime Labour Relations Board (National), on leave being given by that Board, or on leave being given by the administering authority in the province, within 15 days of the issue of the decision to which exception is taken. The National Board may dismiss the appeal, or may alter the decision of the provincial authority.

While the administering authority for the province may make regulations governing the procedure for the administration of the Federal Regulations, they shall not be inconsistent with the latter.

It is provided that the Dominion Government will pay two-thirds of the costs of the province in regard to administration, and the province will pay the remaining third.

In the cases of all three provinces the Dominion Regulations will now be made applicable to those industries in which industrial relations had been previously a provincial matter, as well as in the industries now being returned to provincial jurisdiction. However, Conciliation Boards where necessary will still be constituted by the Dominion authority in all cases called for in the Regulations, although the province will pay one-third of the cost of Boards in cases now to be under provincial jurisdiction.

The New Brunswick Wartime Labour Relations Board was set up by Order in Council P.C. 3455 dated May 9.

The Minister of Health and Labour for New Brunswick is to be the Chairman of the Board. The vice-chairman is Mr. C. J. A. Hughes of Fredericton.

The other members are Mr. G. R. Melvin, Secretary-Treasurer, New Brunswick Federation of Labour, Saint John, N.B.; Mr. R. F. Gould, Executive Board member of the Canadian Brotherhood of Railway Employees and Other Transport Workers, Moncton, N.B.; Mr. R. W. Cameron, lumberman, Fredericton, N.B.; Mr. C. A. Beatteay, Manager, Snowflake Lime Co., Ltd., Saint John, N.B.

Text of Order in Council P.C. 2911 *re* administration within the Province of Ontario of the Wartime Labour Relations Regulations

Whereas section 36 of the Wartime Labour Relations Regulations, (Order in Council P.C. 1003 of Feb. 17, 1944) provides that the Minister of Labour may, with the approval of the Governor in Council, enter into an agreement with the government of any province to provide for the administration within that province of the said Regulations or any part thereof and, that such agreement may provide for the manner in which the Minister of Labour shall exercise the powers conferred on him under the said section and for the transfer to the government of the province or persons specified by the government of the province of all or any part of the jurisdiction in respect of matters within the province conferred on the Wartime Labour Relations Board by the said Regulations, and for a procedure whereby an appeal may be had to the Wartime Labour Relations Board from a decision made in the exercise of the jurisdiction so conferred, and for the reimbursement of the province in respect of expenses so incurred;

And whereas pursuant thereto the Minister of Labour submits for approval an agreement dated 12th April, 1944, entered into by him with the Minister of Labour of the Province of Ontario, to provide for the administration of the said Regulations in the said Province;

Therefore His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to approve the said agreement, of which a copy is hereto annexed as Schedule A, and it is hereby approved accordingly.

And whereas it is deemed necessary by reason of the war, for the security, defence, peace, order and welfare of Canada and for the effective prosecution of the war that the order hereinafter set out be made;

Therefore His Excellency the Governor General in Council, on the same recommendation and under the authority of the War Measures Act, is pleased to make and doth hereby make the following Order:

ORDER

1. In this Order, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations, Order-in-Council P.C. 1003 of February 17, 1944.

2. (1) Except as otherwise hereinafter provided, the jurisdiction and powers of the Wartime Labour Relations Board under the Wartime Labour Relations Regulations with respect to

(i) employees in the Province of Ontario described by the provisions of paragraphs (b) and (c) of subsection one of section three of the said Regulations,

(ii) the employers of all such employees in their relations with such employees, and

(iii) trade unions, employees' organizations and employers' organizations composed of such employees or employers

are hereby vested in the Ontario Labour Relations Board, and all the provisions of the said Regulations relating or referring to the Wartime Labour Relations Board shall relate and refer, *mutatis mutandis,* to the said Ontario Labour Relations Board.

(2) The provisions of subsection one of this section shall not affect, nor be deemed to vest in the Ontario Labour Relations Board, the jurisdiction of the Wartime Labour Relations Board under the said Regulations with respect to

(i) any matter where employees in more than one province of a common employer are affected, or

(ii) any matter arising out of subsection three of section five of the said Regulations where employees in more than one province of several employers are affected, or

(iii) any proceedings pending before the Wartime Labour Relations Board at the date of this Order including any such proceedings with respect to the Ford Motor Company of Canada, Limited, and its employees in the Province of Ontario or any other matter with respect to such Company and its said employees arising out of or relating to such proceedings or the existing dispute between the Company and its said employees.

3. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Ontario Labour Relations Board made pursuant to the Wartime Labour Relations Regulations, may appeal to the Wartime Labour Relations Board by leave of the Wartime Labour Relations Board or the Ontario Labour Relations Board if the application for such leave has been made within fifteen days of the issue of such decision or order of the Ontario Labour Relations Board, or within such longer period as may be allowed by the Wartime Labour Relations Board.

(2) On any such appeal the Wartime Labour Relations Board may dismiss the appeal or make the decision or order which in its opinion the Ontario Labour Relations Board should have made.

4. The Ontario Labour Relations Board may make regulations governing its procedure not inconsistent with the Wartime Labour Relations Regulations or the Regulations made by the Wartime Labour Relations Board thereunder.

5. The expenditures incurred by the Minister of Labour under any agreement executed under section two of this Order shall be paid out of moneys appropriated for the administration of the Wartime Labour Relations Regulations.

Text of Agreement between the Dominion and the Province of Ontario *re* Administration of Wartime Labour Relations Regulations

P.C. 2911

This Agreement made this 12th day of April, 1944, between His Majesty the King in the right of the Dominion of Canada, represented by the Minister of Labour of Canada, hereinafter called "the Dominion" of the One Part; and His Majesty in the right of the Province of Ontario, represented by the Minister of Labour of Ontario hereinafter called "the Province" of the Other Part.

Whereas the Province has enacted appropriate legislation to apply the Wartime Labour Relations Regulations, Order-in-Council P.C. 1003 of February 17, 1944, and amendments to employees described in paragraph (*c*) of subsection one of section three of the said Regulations, to employers of all such employees in their relations with such employees and to trade unions, employees' organizations and employers' organizations composed of such employees and employers; and

Whereas under the provisions of Section thirty-six of the Wartime Labour Relations Regulations the Minister of Labour of Canada is authorized with the approval of the Governor General in Council to enter into an agreement with the Government of any province to provide for the administration within the province of such Regulations; and

Whereas the parties hereto desire to enter into such an agreement to provide for the administration within the Province of Ontario of the Wartime Labour Relations Regulations.

Now therefore the parties hereto pursuant to the provisions of Section thirty-six of the aforesaid Regulations covenant and agree with each other as follows:—

1. (1) In this agreement, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations.

(2) In this agreement

(*a*) "Dominion Minister" means the Minister of Labour of Canada;

(*b*) "Provincial Minister" means the Minister of Labour of Ontario;

(*c*) "National Board" means the Wartime Labour Relations Board appointed under the Wartime Labour Relations Regulations;

(*d*) "Provincial Board" means the Ontario Labour Relations Board appointed by the Lieutenant Governor in Council of the Province of Ontario to administer the Wartime Labour Relations Regulations in the Province of Ontario;

(*e*) "Regulations" means the Wartime Labour Relations Regulations, Order-in-Council P.C. 1003 of February 17, 1944, and any amendments made thereto by the Governor General in Council.

2. The Province by Order of the Lieutenant Governor in Council will appoint a Provincial Board to exercise the powers of the National Board under the Regulations in relation to all matters in respect of which jurisdiction is transferred to it under this agreement, and will appoint an executive officer to be the Chief Executive Officer of such Provincial Board.

3. (1) The Provincial Board will consist of a chairman and an even number of members, not exceeding a total of six, representative of employers and employees.

(2) The Chairman and Chief Executive Officer of the Provincial Board will be appointed after consultation between the Dominion Minister and the Provincial Minister and will be acceptable to both such Ministers.

(3) Members of the Provincial Board who represent employees and employers will be selected from time to time from panels of names submitted by appropriate labour and employer organizations respectively at the request of the Provincial Minister, after consultation between the Dominion Minister and the Provincial Minister and will be acceptable to both such Ministers.

(4) The remuneration of members of the Provincial Board and the Chief Executive Officer of such Board will be fixed at the following rates except to the extent such rates are altered by subsequent agreement between the Dominion Minister and the Provincial Minister:—

Chairman—Twenty dollars per day and each other members fifteen dollars per day, when engaged on the work of the Board together with necessary expenses when absent from his place of residence on the work of the Board:

Chief executive officer—salary at a rate agreed on by the Dominion Minister and Provincial Minister.

4. The jurisdiction of the National Board under the Regulations is transferred to the Provincial Board with respect to employees in the Province of Ontario described by the provisions of paragraphs (*b*) and (*c*) of subsection one of section three of the Regulations, the employers of all such employees in their relations with such employees, and trade unions, employees' organizations and employers' organizations composed of such employees or employers.

5. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Provincial Board may appeal to the National Board, by leave of the National Board or the Provincial Board if the application for such leave has been made within fifteen days of the issue of such decision or order of the Provincial Board, or within such longer period as may be allowed by the National Board.

(2) On any such appeal the National Board may dismiss the appeal or make the decision or order which in its opinion the Provincial Board should have made.

6. The Provincial Board may make regulations governing its procedure not inconsistent with the Wartime Labour Relations Regulations or the regulations made by the National Board thereunder.

7. The services of the conciliation officers of the Provincial and the Dominion Departments of Labour will be utilized as required in the administration of the Regulations in accordance with such arrangements as are made from time to time between the Dominion Minister and Provincial Minister.

8. Where pursuant to section thirteen of the Regulations a conciliation officer recommends

the appointment of a Conciliation Board in relation to an employer and his employees in a matter within the jurisdiction of the Provincial Board, he will transmit his report to the Provincial Minister who will forthwith transmit the same to the Dominion Minister along with whatever recommendation he sees fit to make with respect thereto.

9. The Provincial Board will be responsible for the proper administration and enforcement of the Regulations within the province as to all matters transferred to its jurisdiction pursuant to this agreement.

10. Except to the extent the provisions of this section are altered by subsequent agreement between the Dominion and Provincial Ministers, the costs of administration of the Regulations within the Province of Ontario will be divided in the manner following:

(1) The Dominion will reimburse the Province for two-thirds of its disbursements made in the administration of the Regulations in respect of:

(*a*) Remuneration, travelling and living expenses of memebers of the Provincial Board and full time personnel employed by the Provincial Board;

(*b*) Telegraph, telephone, postage, printing, stationery and supplies expenses of the Provincial Board;

(*c*) Office rentals for accommodation of the Provincial Board and staff where such accommodation is not provided on premises owned by the Province;

(*d*) Accounts of legal agents employed by the Attorney General of Ontario in the prosecution of offences under the Regulations, court costs and witness fees paid in connection with such prosecution if certified or taxed by the Attorney General of Ontario.

(2) The Province will reimburse the Dominion for one-third of its disbursements made for Conciliation Boards appointed under the Regulations in relation to matters in respect of which jurisdiction is transferred to the Provincial Board under this agreement, the amount of such disbursements being certified by the Comptroller of the Treasury.

11. The Province agrees to maintain adequate records of all expenditures incurred in respect of which it requests the Dominion to contribute under this agreement, such records to be segregated from although reconciled with the continuing books of account of the province and undertakes to furnish such information and produce such records, documents, files, directly or indirectly connected with the operation of this agreement as officers of the Dominion may deem necessary to permit full examination and audits.

12. It is agreed that statements of accounts for expenditures made by the Province when submitted for Dominion contribution pursuant to the provisions of this agreement shall be accompanied by a certificate of the Provincial Auditor and be made in such form as the Dominion Minister may direct from time to time.

13. It is agreed that disbursements of the Province shall not be eligible for payment of the contributions of the Dominion unless they are made in legal tender or by cheques or other instruments drawn on a chartered bank, and that the Dominion shall not be liable for any claim for expenditure submitted by the Province under the terms of this agreement unless such claim is submitted within 120 days next after the last day of the month in which the expenditure described in the claim was incurred.

14. This agreement may be terminated by either party on six months' notice.

15. The parties hereto will take steps to obtain any further approval of this agreement necessary to give it legal effect.

In witness whereof, the Honourable Humphrey Mitchell, Minister of Labour of Canada, has hereunto set his hand on behalf of the Dominion of Canada and the Honourable Charles Daley, Minister of Labour of the Province of Ontario, has hereunto set his hand on behalf of the Province of Ontario.

Signed on behalf of the Dominion of Canada by the Hon. Humphrey Mitchell in the presence of A. H. Brown — Humphrey Mitchell

Signed on behalf of the Province of Ontario by the Hon. Charles Daley, in the presence of L. E. Blackwell — Charles Daley

Text of Agreement between the Dominion and the Province of British Columbia *re* Administration of Wartime Labour Relations Regulations

SCHEDULE "A"

This Agreement made this 18th day of April, 1944, between His Majesty the King in the right of the Dominion of Canada, represented by the Minister of Labour of Canada, hereinafter called "the Dominion" of the one part; and His Majesty the King in the right of the Province of British Columbia, represented by the Minister of Labour for British Columbia, hereinafter called "the Province" of the other part.

Whereas the Province has enacted the "Wartime Labour Relations Regulations Act" (to come into force on a date to be fixed by the Lieutenant-Governor by his Proclamation) to apply the Wartime Labour Relations Regulations, Order in Council P.C. 1003 of February 17, 1944, and amendments, to employees described in paragraph (*c*) of subsection one of section three of the said Regulations, to employers of all such employees in their relations with such employees and to trade unions, employees' organizations and employers' organizations composed of such employees and employers' and

Whereas under the provisions of Section 36 of the Wartime Labour Relations Regulations the Minister of Labour of Canada is authorized with the approval of the Governor in Council to enter into an agreement with the government of any province to provide for the administration within the province of such regulations; and

Whereas the parties hereto desire to enter into such an agreement to provide for the administration within the Province of British Columbia of the Wartime Labour Relations Regulations:

Now therefore the parties hereto pursuant to the provisions of Section 36 of the aforesaid regultations covenant and agree with each other as follows:—

1. (1) In this agreement, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations.

(2) In this agreement

(*a*) "Dominion Minister" means the Minister of Labour of Canada,

(*b*) "Provincial Minister" means the Minister of Labour for British Columbia,

(*c*) "National Board" means the Wartime Labour Relations Board appointed under the Wartime Labour Relations Regulations,

(*d*) "Regulations" means the Wartime Labour Relations Regulations, P.C. 1003 of February 17, 1944, and any amendments made thereto by the Governor General in Council.

2. The Province shall cause the "Wartime Labour Relations Regulations Act" of the Province of British Columbia to be proclaimed.

3. The Provincial Minister shall administer the Regulations in the Province of British Columbia in relation to all matters in respect of which jurisdiction is transferred to him under this agreement.

4. (1) Except as otherwise hereinafter provided, the jurisdiction of the National Board under the Regulations shall be transferred to the Provincial Minister with respect to employees in the Province of British Columbia described by the provisions of paragraphs (*b*) and (*c*) of subsection one of section three of the Regulations, the employers of all such employees in their relations with such employees, and trade unions, employees' organizations and employers' organizations composed of such employees or employers.

(2) The provisions of subsection one of this section shall not be deemed to include the transfer of the jurisdiction of the National Board under the Regulations with respect to

(i) any matter where employees in more than one province of a common employer are affected, or

(ii) any matter arising out of subsection three of section five of the Regulations where employees in more than one province of several employers are affected.

5. Notwithstanding the provisions of section four of this agreement, the National Board may exercise the jurisdiction vested in it under the Regulations with respect to any proceeding pending before it on the date this agreement is approved by the Governor General in Council.

6. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Provincial Minister may appeal to the National Board, by leave of the National Board or the Provincial Minister if the application for such leave has been made within fifteen days of the issue of the decision or order by the Provincial Minister or within such longer period as may be allowed by the National Board.

(2) On any such appeal the National Board may dismiss the appeal or make the decision or order which in its opinion the Provincial Minister ought to have made.

7. The Provincial Minister may make such regulations governing his procedure not inconsistent with the Wartime Labour Relations Regulations or the regulations made by the National Board.

8. The services of the conciliation officers of Provincial and Dominion Departments of Labour shall be utilized as required in the administration of the Regulations for the investigation of applications for certification and conciliation purposes, in accordance with such arrangements as are made between the Dominion Minister and Provincial Minister, provided that the Dominion Minister may in any circumstances where in his opinion a matter of more than provincial importance is involved, instruct a Dominion Conciliation Officer to confer with the interested parties.

9. Where pursuant to section thirteen of the Regulations a conciliation officer recommends the appointment of a Conciliation Board in relation to an employer and his employees in a matter within the jurisdiction of the Provincial Minister, he will transmit his report to the Provincial Minister, who will forthwith transmit the same to the Dominion Minister along with whatever recommendation he sees fit to make with respect thereto.

10. The Provincial Minister will be responsible for the proper administration and enforcement of the Regulations within the Province as to all matters transferred to his jurisdiction pursuant to this agreement.

11. Except to the extent that the provisions of this section are modified by subsequent agreement between Dominion and Provincial Ministers, the following provisions in regard to the cost of administration of the Regulations within the Province shall have effect:—

(*a*) The Dominion will reimburse the Province for two thirds of its disbursements made in the administration of the Regulations in respect of—

(i) remuneration, travelling and living expenses of full time personnel employed in the administration of the Regulations;

(ii) telegraph, telephone, postage, printing and stationery and supplies expenses;

(iii) office rentals where the office accommodation is not provided on premises owned by the Province;

(iv) prosecutions under the Regulations.

(*b*) The Province will reimburse the Dominion for one-third of its disbursements made for Conciliation Boards appointed under the Regulations, such disbursements being certified by the Comptroller of the Treasury.

12. (1) The Province agrees to maintain adequate records of all expenditures incurred in respect of which it requests the Dominion to contribute under this agreement, such records to be segregated from although reconciled with the continuing books of accounts of the Province and undertakes to furnish such information and produce such records connected with the operation of the agreement as officers of the Dominion may deem necessary to permit full examination and audit.

(2) All statements of account for expenditures submitted by the Province for reimbursement pursuant to this agreement will be accompanied by a certificate of the Provincial

Auditor and made in such form as the Dominion may direct from time to time.

(3) Disbursements of the Province shall not be eligible for payment of contributions unless they are made in legal tender or by cheque or other instrument drawn on a chartered bank and the Dominion shall not be liable for any claim for expenditure submitted by the Province under the agreement unless such claim is submitted within 120 days next after the end of the month in which the ependiture described in the claim was incurred.

13. This agreement may be terminated by either party on six months' notice.

14. The parties hereto will take steps to obtain any further approval of this agreement necessary to give it legal effect.

In witness whereof, the Honourable Humphrey Mitchell, Minister of Labour, has hereunto set his hand on behalf of the Dominion of Canada, and the Honourable George Sharratt Pearson has hereunto set his hand on behalf of the Province of British Columbia.

Signed on behalf of the Dominion of Canada by the Honourable Humphrey Mitchell, Minister of Labour for Canada in the presence of A. MacNamara.

HUMPHREY MITCHELL.

Signed on behalf of the Province of British Columbia by the Honourable George Sharratt Pearson, Minister of Labour for the Province of British Columbia, in the presence of Adam Bell.

GEO. S. PEARSON.

Text of Order in Council P.C. 3062 *re* administration within the Province of British Columbia of the Wartime Labour Relations Regulations

Whereas section 36 of the Wartime Labour Relations Regulations (Order in Council P.C. 1003 of February 17, 1944) provides that the Minister of Labour may, with the approval of the Governor in Council, enter into an agreement with the government of any province to provide for the administration within that province of the said Regulations or any part thereof and that such agreement may provide for the manner in which the Minister of Labour shall exercise the powers conferred on him under the said section and for the transfer to the government of the province or persons specified by the government of the province of all or any part of the jurisdiction in respect of matters within the province conferred on the Wartime Labour Relations Board by the said Regulations, and for a procedure whereby an appeal may be had to the Wartime Labour Relations Board from a decision made in the exercise of the jurisdiction so conferred, and for the reimbursement of the province in respect of expenses so incurred;

And whereas pursuant thereto the Minister of Labour submits for approval an agreement dated 18th April, 1944, entered into by him with the Minister of Labour of the Province of British Columbia, to provide for the administration of the said Regulations in the said Province;

Therefore His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to approve the said agreement, of which a copy is herto annexed as Schedule A, and it is hereby approved accordingly.

And whereas it is deemed necessary by reason of the war, for the security, defence, peace, order and welfare of Canada and for the effective prosecution of the war that the order hereinafter set out be made:

Therefore His Excellency the Governor General in Council, on the same recommendation and under the authority of the War Measures Act, is pleased to make and doth hereby make the following Order:

ORDER

1. In this Order, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations, Order in Council P.C. 1003 of February 17, 1944.

2. (1) The jurisdiction and powers of the Wartime Labour Relations Board under the Wartime Labour Relations Regulations with respect to

(i) employees in the Province of British Columbia described by the provisions of paragraph (*b*) and (*c*) of subsection one of section three of the said Regulations,

(ii) the employers of all such employees in their relations with such employees, and

(iii) trade unions, employees' organizations and employers' organizations composed of such employees or employers.

are hereby vested in the Minister of Labour of the Province of British Columbia and all the provisions of the said Regulations relating or referring to the Wartime Labour Relations Board shall relate and refer, *mutatis mutandis*, to the said Minister of Labour of the Province of British Columbia.

(2) The provisions of subsection one of this section shall not be deemed to include the transfer of the jurisdiction of the Wartime Labour Relations Board under the Regulations with respect to

(i) any matter where employees in more than one province of a common employer are affected, or

(ii) any matter arising out of subsection three of section five of the Regulations where employees in more than one province of several employers are affected;

3. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Minister of Labour of the Province of British Columbia made pursuant to the Wartime Labour Relations Regulations, may appeal to the Wartime Labour Relations Board by leave of the Wartime Labour Relations Board or the Minister of Labour of the Province of British Columbia if the application for such leave has been made within fifteen days of the issue of such decision or order of the Minister of Labour of the Province of British Columbia, or within such longer period as may be allowed by the Wartime Labour Relations Board.

(2) On any such appeal the Wartime Labour Relations Board may dismiss the appeal or make the decision or order which in its opinion the Minister of Labour of the Province of British Columbia should have made.

4. The Minister of Labour of the Province of British Columbia may make regulations

governing his procedure not inconsistent with the Wartime Labour Relations Regulations or the regulations made by the Wartime Labour Relations Board thereunder.

5. The expenditures incurred by the Minister of Labour of Canada under any agreement executed under section two of this Order shall be paid out of moneys appropriated for the administration of the Wartime Labour Relations Regulations.

Certified to be a true copy.

A. D. P. Heeney,
Clerk of the Privy Council.

Text of Order in Council P.C. 3455 *re* Administration within the Province of New Brunswick of the Wartime Labour Relations Regulations

Whereas section 36 of the Wartime Labour Relations Regulations (Order in Council P.C. 1003 of February 17, 1944) provides that the Minister of Labour may, with the approval of the Governor in Council, enter into an agreement with the government of any province to provide for the administration within that province of the said Regulations or any part thereof and that such agreement may provide for the manner in which the Minister of Labour shall exercise the powers conferred on him under the said section and for the transfer to the government of the province or persons specified by the government of the province of all or any part of the jurisdiction in respect of matters within the province conferred on the Wartime Labour Relations Board by the said Regulations, and for a procedure whereby an appeal may be had to the Wartime Labour Relations Board from a decision made in the exercise of the jurisdiction so conferred, and for the reimbursement of the province in respect of expenses so incurred;

And whereas pursuant thereto the Minister of Labour submits for approval an agreement date 29th April, 1944, entered into by him with the Minister of Health and Labour of the Province of New Brunswick, to provide for the administration of the said Regulations in the said Province;

Therefore His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to approve the said agreement, of which a copy is hereto annexed as Schedule A, and it is hereby approved accordingly.

And whereas it is deemed necessary by reason of the war, for the security, defence, peace, order and welfare of Canada and for the effective prosecution of the war that the order hereinafter set out be made;

Therefore His Excellency the Governor General in Council, on the same recommendation and under the authority of the War Measures Act, is pleased to make and doth hereby make the following Order:

ORDER

1. In this Order, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations, Order in Council P.C. 1003 of February 17, 1944.

2. (1) There shall be a New Brunswick Wartime Labour Relations Board for the Province of New Brunswick (hereinafter called "the Provincial Board") consisting of: the Minister of Health and Labour for the Province of New Brunswick who shall be Chairman of such Board,

C. J. A. Hughes of Fredericton, N.B., who shall be Vice-Chairman of such Board, and the following members—

Mr. G. R. Melvin, Secretary-Treasurer, New Brunswick Federation of Labour, Saint John, N.B.

Mr. R. F. Gould, Executive Board Member of the Canadian Brotherhood of Railway Employees and other Transport Workers, Moncton, N.B.

Mr. R. W. Cameron, Lumberman, Fredericton, N.B.

Mr. C. A. Beatteay, Manager, Snowflake Lime Company Ltd., Saint John, N.B.

(2) The Chairman or Vice-Chairman and any two other members of the Provincial Board shall constitute a quorum, and in the absence of the Chairman, the Vice-Chairman shall act as Chairman of such Board.

(3) A decision of the majority of the members of the Provincial Board present and constituting a quorum shall be the decision of the Provincial Board and in the event of a tie, the Chairman or Acting Chairman shall have a casting vote.

(4) The Provincial Board and each member thereof shall have the powers of a Commissioner under Part I of the Inquiries Act.

(5) The Provincial Board and each member thereof may receive and accept such evidence and information on oath, affidavit or otherwise as in its or his discretion it or he may deem fit and proper whether admissible as evidence in a court of law or not.

(6) The Provincial Board shall determine its own procedure but shall in every case give an opportunity to all interested parties to present evidence and make representations.

(7) The remuneration of each member of the Provincial Board, other than the vice-chairman, shall be fifteen dollars per day for each day engaged in work of the Provincial Board, together with actual living and travelling expenses when necessarily absent from his place of residence in connection with his duties as a member of such Board: the remuneration of the Vice-Chairman of such Board shall be at the rate of five hundred dollars per annum additional to the remuneration payable to him as Chief Executive Officer of the New Brunswick Regional War Labour Board, together with actual living and travelling expenses when absent from Feredericton, N.B., in connection with his duties as Vice-Chairman of the Provincial Board.

(8) Mr. N. D. Cochrane, Director of Labour Relations, Province of New Brunswick, Fredericton, N.B., shall be the Chief Executive Officer of the Provincial Board and his remuneration as such shall be at the rate of nine hundred dollars per annum, additional to such remuneration as he may be paid by the Government of the Province of New Brunswick.

3. The Provincial Board may make regulations governing its procedure not inconsistent

with the Wartime Labour Relations Regulations or the regulations made by the Wartime Labour Relations Board thereunder.

4. (1) Except as hereinafter provided, the jurisdiction and powers of the Wartime Labour Relations Board under the Wartime Labour Relations Regulations with respect to

(i) employees in the Province of New Brunswick described by the provisions of paragraphs (*b*) and (*c*) of subsection one of section three of the said Regulations,

(ii) the employers of all such employees in their relations with such employees, and

(iii) trade unions, employees' organizations and employers' organizations composed of such employees or employers,

are hereby vested in the Provincial Board and all the provisions of the said Regulations relating to or referring to the Wartime Labour Relations Board shall relate and refer *mutatis mutandis* to the said Provincial Board.

(2) The provisions of subsection one of this section shall not affect nor be deemed to vest in the Provincial Board the jurisdiction of the Wartime Labour Relations Board under the Regulations with respect to

(i) any matter where employees in more than one province of a common employer are affected, or

(ii) any matter arising out of subsection three of section five of the Regulations where employees in more than one province of several employers are affected.

5. The Wartime Labour Relations Board may exercise the jurisdiction vested in it under the Wartime Labour Relations Regulations with respect to any proceeding pending before it on the date of this Order.

6. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Provincial Board made pursuant to the Wartime Labour Relations Regulations may appeal to the Wartime Labour Relations Board by leave of the Wartime Labour Relations Board or the Provincial Board if the application for such leave has been made within fifteen days of the issue of such decision or order of the Provincial Board or within such longer period as may be allowed by the Wartime Labour Relations Board.

(2) On any such appeal the Wartime Labour Relations Board may dismiss the appeal or make the decision or order which in its opinion the Provincial Board should have made.

7. The expenditures incurred by the Minister of Labour under any agreement executed under section two of this Order shall be paid out of moneys appropriated for the administration of the Wartime Labour Relations Regulations.

Certified to be a true copy.

A. D. P. Heeney,

Clerk of the Privy Council.

Text of Agreement between the Dominion and the Province of New Brunswick *re* Administration of the Wartime Labour Relations Regulations

P.C. 3455

SCHEDULE "A"

This Agreement made this 29th day of April, 1944, between His Majesty the King in the right of the Dominion of Canada, represented by the Minister of Labour of Canada, hereinafter called "the Dominion" of the one part; and His Majesty the King in the right of the Province of New Brunswick represented by the Minister of Health and Labour of New Brunswick, hereinafter called "the Province" of the other part.

Whereas the Province has enacted appropriate leegislation to apply the Wartime Labour Relations Regulations, Order in Council P.C. 1003 of February 17, 1944, and amendments, to employeees described in paragraph (*c*) of subsection one of section three of the said Regulations, to employers of all such employees in their relations with such employees and to trade unions, employees' organizations and employers' organizations composed of such employees and employers; and

Whereas under the provisions of Section thirty-six of the Wartime Labour Relations Regulations the Minister of Labour of Canada is authorized with the approval of the Governor General in Council to enter into an agreement with the Government of any province to provide for the administration within the province of such Regulations; and

Whereas the parties hereto desire to enter into such an agreement to provide for the administration within the Province of New Brunswick of the Wartime Labour Relations Regulations;

Now therefore the parties hereto pursuant to the provisions of Section thirty-six of the aforesaid Regulations covenant and agree with each other as follows:

1. (1) In this agreement, unless the context otherwise requires, words and expressions have the same meaning as in the Wartime Labour Relations Regulations.

(2) In this agreement

(*a*) "Dominion Minister" means the Minister of Labour of Canada,

(*b*) "Provincial Minister" means the Minister of Health and Labour of the Province of New Brunswick,

(*c*) "National Board" means the Wartime Labour Relations Board appointed under the Wartime Labour Relations Regulations,

(*d*) "Provincial Board" means the Board designated pursuant to the provisions of this agreement to administer the Wartime Labour Relations Regulations in the Province of New Brunswick,

(*e*) "Regulations" means the Wartime Labour Relations Regulations, Order in Council P.C. 1003 of February 17, 1944, and amendments.

8115—6½

2. The Dominion, by Order of the Governor General in Council, will appoint a Provincial Board to exercise the powers of the National Board under the Regulations in the Province of New Brunswick in relation to all matters in respect of which jurisdiction is transferred to it pursuant to this agreement or otherwise, and will provide for the appointment of an executive officer who will be the Chief Executive Officer of the Provincial Board.

3. (1) The Provincial Board will consist of a Chairman and an even number of other members, not exceeding a total of six, representative of employers and employees and provision may be made for the appointment of a Vice-Chairman to preside over the Provincial Board in the absence of the Chairman.

(2) The members of the Provincial Board will be appointed after consultation by the Dominion Minister with the Provincial Minister and the remuneration payable to such members shall be fixed at the same rates as are payable to members of the Regional War Labour Board for the Province of New Brunswick.

(3) With the concurrence of the National War Labour Board, the staff, offices and other facilities of the Regional War Labour Board for the Province of New Brunswick will be made available for the use of and will be utilized by the Provincial Board in the administration of the Regulations in the Province of New Brunswick.

4. (1) Except as otherwise hereinafter provided the jurisdiction of the National Board under the Regulations shall be transferred to the Provincial Board with respect to employees in the Province of New Brunswick described by the provisions of paragraphs (*b*) and (*c*) of subsection one of section three of the Regulations, the employers of all such employees in their relations with such employees, and trade unions, employees' organizations and employers' organizations composed of such employees or employers.

(2) The provisions of subsection one of this section shall not be deemed to include the transfer of the jurisdiction of the National Board under the Regulations with respect to

(i) any matter where employees in more than one province of a common employer are affected, or

(ii) any matter arising out of subsection three of section five of the Regulations where employees in more than one province of several employers are affected.

5. (1) Notwithstanding the provisions of section four of this agreement, the National Board may exercise the jurisdiction vested in it under the Regulations with respect to any proceeding pending before it on the date this agreement is approved by the Governor General in Council.

(2) Nothing contained in this agreement shall be deemed to preclude the Governor General in Council from revesting in the National Board jurisdiction under the Regulations relating to any particular matter which is otherwise within the jurisdiction of the Provincial Board by virtue of this agreement and whether or not at that time pending before the Provincial Board.

6. (1) Any employer, employee, employers' organization, trade union, or employees' organization interested in or affected by any decision or order of the Provincial Board may appeal to the National Board, by leave of the National Board or the Provincial Board if the application for such leave has been made within fifteen days of the issue of such decision or order of the Provincial Board, or within such longer period as may be allowed by the National Board.

(2) On any such appeal the National Board may dismiss the appeal or make the decision or order which in its opinion the Provincial Board should have made.

7. The Provincial Board may make regulations governing its procedure not inconsistent with the Wartime Labour Relations Regulations or the regulations made by the National Board thereunder.

8. The services of the conciliation officers of the Provincial and the Dominion Departments of Labour will be utilized as required in the administration of the Regulations for the investigation of applications for certification and for conciliation purposes in accordance with such arrangements as are made from time to time between the Dominion Minister and Provincial Minister.

9. Where pursuant to section thirteen of the Regulations a conciliation officer recommends the appointment of a Conciliation Board in relation to an employer and his employees in a matter within the jurisdiction of the Provincial Board, he will transmit the same to the Provincial Minister who will forthwith transmit the same to the Dominion Minister along with whatever recommendation he sees fit to make with reference thereto.

10. The Provincial Board will be responsible for the proper administration and enforcement of the Regulations within the province as to all matters transferred to its jurisdiction pursuant to this agreement.

11. Except to the extent that the provisions of this section are altered by subsequent agreement between the Dominion and Provincial Ministers, the following provisions in regard to the cost of administration of the Regulations in the Province of New Brunswick shall have effect:

(1) The Province will reimburse the Dominion for one-third of its disbursements for the administration of the Regulations in the Province of New Brunswick through the Provincial Board pursuant to this agreement including one-third of its disbursements made for Conciliation Boards appointed under the Regulations in relation to matters in respect of which jurisdiction is transferred to the Provincial Board under this agreement.

(2) For the purpose of this section, the disbursements of the Dominion shall include the amount of the salaries and expenses of any additional staff of the Regional War Labour Board for the Province of New Brunswick which the Chairman or Vice-Chairman of that Board certifies as having been employed to provide for the administration of the Regulations in the Province.

(3) The Dominion will reimburse the Province for two-thirds of its disbursements made in the prosecution of offences under the Regulations if certified or taxed by the Attorney-General for the Province and for salaries of any provincial staff at-

tached by arrangement with the National Board, for full time employment with the Provincial Board.

(4) The Dominion shall, in January of each year, furnish to the Province a statement of disbursements payable by the Province pursuant to this agreement for the preceding calendar year certified by the Comptroller of the Treasury and the Province shall reimburse the Dominion for its share of such disbursements within two months after the receipt of such statement.

(5) The Province will, in January of each year, furnish to the Dominion a statement of disbursements payable by the Dominion pursuant to this agreement for the preceding calendar year certified by the Provincial Auditor and the Dominion shall, within two months after receipt thereof, reimburse the Province for its share of such disbursements.

(6) Each party shall furnish to the other such particulars of accounts as may be deemed necessary by the other for payment of the accounts.

12. This agreement may be terminated by either party on six months' notice.

13. The parties hereto will take steps to obtain any further approval of this agreement necessary to give it legal effect.

In witness whereof, the Honourable Humphrey Mitchell, Minister of Labour of Canada, has hereunto set his hand on behalf of the Dominion of Canada and the Honourable J. Andre Doucet, Minister of Health and Labour of New Brunswick, has hereunto set his hand on behalf of the Province of New Brunswick.

Signed on behalf of the Dominion of Canada by the Honourable Humphrey Mitchell, Minister of Labour of Canada, in the presence of A. MacNamara.

HUMPHREY MITCHELL.

Signed on behalf of the Province of New Brunswick by the Honourable J. Andre Doucet, Minister of Health and Labour of New Brunswick, in the presence of J. Edward Hughes.

J. ANDRE DOUCET.

Recent Proceedings under the Industrial Disputes Investigation Act

With the bringing into effect on March 20, 1944, of the Wartime Labour Relations Regulations, the Industrial Disputes Investigation Act, except as to matters pending, was declared to be of no effect. The Industrial Disputes Investigation Act is therefore considered to be in effect and applying only to such cases in which applications for the establishment of Boards of Conciliation and Investigation had been received prior to the effective date of the new Regulations.

During the month of April one Board of Conciliation and Investigation was established and the constitution of another was completed. Seven settlements were effected and one application was withdrawn. In one case the application for a Board was held in abeyance. Three Boards submitted their reports in connection with the following disputes:

1. Between the Dominion Rubber Company Limited, Kitchener, Ont., and its employees, members of Local 80, United Rubber Workers of America.

2. Between the Direct-Winters Transport, Windsor, Ont., and its employees, members of Local 880, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America.

3. Between the Dominion Engineering Works Limited, Longueuil and Lachine, P.Q., and its employees, members of Lodges 1660 and 1596, International Association of Machinists.

Board Established

Canada Packers, Limited, Edmonton, Alta.—On April 24, a Board of Conciliation and Investigation was established to deal with a dispute between Canada Packers, Limited, and its employees, members of Local 243, United Packinghouse Workers of America (L.G. April, 1944, p. 479). Mr. F. E. Harrison, Western Representative of the Federal Department of Labour, who was authorized on March 11, as Industrial Disputes Inquiry Commissioner to investigate the dispute in view of the inconclusive result of a representation vote of the employees held on April 14, recommended that a Board of Conciliation and Investigation be established. At the end of the month, Rev. C. J. Foran, Edmonton, Alta., had been appointed a member of the Board on the nomination of the employees and the company had been requested to submit the name of a person to be appointed to the Board, following which the employers' and employees' nominees will be asked to confer with a view to making a joint recommendation of a person to be appointed chairman and third member of the Board.

Board Fully Constituted

Dominion Forge and Stamping Company, Windsor, Ont.—The constitution of the Board of Conciliation and Investigation established to deal with a dispute between Dominion Forge and Stamping Company, Windsor, Ont.,

and its employees, members of the United Automobile Workers of America (C.I.O.) (L.G., April, 1944, p. 481), was completed during April. The personnel of the Board is as follows: Mr. Cecil A. Wright, K.C., Toronto, Ont., chairman, appointed on the joint recommendation of the other two members of the Board; Messrs. J. J. Robinette and Bora Laskin, both of Toronto, Ont., appointed on the nomination of the employer and employees respectively.

Settlements

West Coast Shipbuilders, Limited, Vancouver, B.C.—On April 17, copies of an agreement, which had been negotiated in settlement of the dispute between West Coast Shipbuilders, Limited, and its employees, members of Local No. 1, Boilermakers and Iron Shipbuilders' Union of Canada; Local No. 1, Amalgamated Building Workers of Canada (Painters Section); Local No. 3, Amalgamated Electrical Workers, and Local No. 2, Dock and Shipyard Workers of Vancouver and District was received in the Department. The International Association of Machinists; the United Association of Journeymen Plumbers and Steamfitters; and the International Union of Operating Engineers did not accept the settlement agreed upon following the intervention of Honourable Mr. Justice S. E. Richards as Industrial Disputes Inquiry Commissioner (L.G., March, 1944, p. 288) and for the time being these three unions are remaining without an agreement.

The agreement between the company and the union is summarized in the article entitled "Recent Collective Agreements," appearing elsewhere in this issue.

Goodyear Tire and Rubber Company of Canada, Limited, New Toronto, Ont.—On April 12, Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, Ont., who was requested to endeavour to obtain a settlement of the dispute without recourse to strike vote procedure, forwarded to the Department copies of an agreement reached between the Goodyear Tire and Rubber Company of Canada, Limited, New Toronto, Ont., and its employees, members of Local 232, United Rubber Workers of America (L.G., Jan., 1944, p. 51). The agreement betwen the company and the union is summarized in the article entitled "Recent Collective Agreements," appearing elsewhere in this issue.

Atlantic Sugar Refineries, Limited, Saint John, N.B.—As a result of the mediation of Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., who was authorized as Industrial Disputes Inquiry Commissioner to investigate a dispute between the Atlantic Sugar Refineries, Limited, Saint John, N.B., and its employees, members of Local 20, Sugar Refinery Workers' Union (L.G., Oct., 1943, p. 1358), an agreement was signed by the parties to the dispute. A summary of the agreement will be found in the article entitled "Recent Collective Agreements," appearing elsewhere in this issue. In view of the settlement reached, union representatives agreed to withdraw the application.

Dominion Rubber Company, Limited, St. Jerome, P.Q.—On April 3, Mr. R. Trepanier, Industrial Relations Officer, Montreal, P.Q., forwarded to the Department a copy of an agreement concluded between the Dominion Rubber Company, Limited, St. Jerome, P.Q., and its employees, members of Local 144, St. Jerome Rubber Workers Federal Union (L.G., Feb., 1944, p. 177), terminating a dispute between the parties. The agreement between the company and the union is summarized in the article entitled "Recent Collective Agreements", appearing elsewhere in this issue.

Dominion Glass Company, Limited, Hamilton, Ont.—The chairman of the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Glass Company, Limited, Hamilton, Ont., and its employees, members of Local 3, Canadian Brotherhood of Glass Workers (C.C.L.) (L.G., July, 1943, p. 922), advised the Department on April 15, 1944, that the Board, which had adjourned its hearings pending certification proceedings being taken in the Ontario Labour Court, considered that its work was finished, as the applicant for the Board had been certified as the bargaining agency for the Hamilton plant of the company. In view of the circumstances this is now considered closed.

Sudbury-Copper Cliff Suburban Electric Railway Company, Sudbury, Ont.—On April 18, the Department received copies of an agreement which had been signed between the Sudbury-Copper Cliff Suburban Electric Railway Company, Sudbury, Ont., and its employees, members of Division 269, Canadian Brotherhood of Railway Employees and Other Transport Workers (L.G., April, 1943, p. 479). Mr. Bernard Wilson, Industrial Relations Officer, Ottawa, Ont., who had been appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute, was successful in having the parties reach an amicable settlement of the matters in dispute.

In view of the settlement reached, the representative of the applicant union requested that the application for the establishment of a Board of Conciliation and Investigation be withdrawn. The agreement between the com-

pany and the union is summarized in the article entitled "Recent Collective Agreements," appearing elsewhere in this issue.

Application Held in Abeyance

Canadian Pacific Railway Company, Toronto, Ont.—On April 13, the representative of the applicant union requested the Department to hold in abeyance the application for the establishment of a Board of Conciliation and Investigation to deal with the dispute between the Canadian Pacific Railway Company (Ticket Offices), Toronto, Ont., and its employees, members of Division 267, Canadian Brotherhood of Railway Employees and Other Transport Workers (L.G., Feb., 1944, p. 174). This action was taken in view of the fact that the Union had made application to the Wartime Labour Relations Board (National) for certification as the bargaining agency of the employees concerned. Accordingly, the parties were advised that the application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act would be held in abeyance pending the decision of the Wartime Labour Relations Board (National) on the application for certification.

Report of Board in Dispute between Dominion Rubber Company, Limited, Kitchener, Ont., and its employees

On April 13, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Rubber Company, Limited, Kitchener, Ont., and its employees, members of Local 80, United Rubber Workers of America (L.G., Feb., 1944, p. 174).

The personnel of the Board was as follows: Honourable Mr. Justice J. G. Gillanders, Osgoode Hall, Toronto, Ont., chairman, appointed on the joint recommendation of the other two members of the Board; Messrs. Walter J. McGibbon, Waterloo, Ont., and F. Andrew Brewin, Toronto, Ont., appointed on the nomination of the employer and employees respectively.

The texts of the report of the Board and the minority report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between the Dominion Rubber Company Limited and Local Union No. 80, United Rubber Workers of America.

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation appointed by you in connection with this dispute begs to submit its report as follows:—

The Board held sittings in Toronto and Kitchener, Ontario. At the sittings in Kitchener representatives of the Union and the Company attended before the Board submitting full and complete briefs setting out their submissions, and presented *viva voce* their views on the matters in dispute.

The Union was represented by H. R. Mitchell, Dominion representative of the U.R.W.A.; Carl Fitzgerald, an employee and President of the local Union; and Paul Ernst, an employee and secretary of the local Union.

The Company was represented by J. K. Sims as counsel; Paul Smith, secretary; and Willis Jones, Personnel Manager.

In pursuance of the provisions of s. 42 it should be noted that the Union representatives were good enough to state to the Board that they had no objection to Mr. Sims appearing as counsel for the Company before the Board.

Dispute

In the application for the establishment of this Board various matters were listed as those in dispute between the parties. Several of these had to do with wages, and this Board is without jurisdiction in respect thereof. The items of dispute falling within the jurisdiction of the Board of Conciliation are limited to:—

(*a*) Union shop.
(*b*) Check-off.
(*c*) Provisions respecting job progression.
(*d*) Eligibility of certain employees as members of the Union for collective bargaining purposes.

Facts

The Company owns and operates the Dominion Tire factory at Kitchener, Ontario, which includes three manufacturing divisions, the Tire Division, the Rubber Machinery Shops, and the Metal Products Division. This dispute concerns the three mentioned divisions of the Dominion Tire factory at Kitchener, which, for the purposes of this report, may be called The Company.

The Company employs a total of some 1,386 persons not all of whom are eligible as members of a collective bargaining organization. It is said that the Union has a paid-up membership of approximately 800 out of a total of something over 900 employees eligible for membership.

The Union has been recognized as the bargaining agent for the Company's employees since March 10, 1939, and since that date the parties have been operating under collective bargaining agreements.

In 1943 negotiations began between the parties looking to the execution of a new agreement. In these negotiations the Union pressed for the inclusion of a clause providing for a union shop and for a check-off of union dues. The Company was opposed to both of these demands in principle, and the parties finally found that they were unable to agree on these major matters and several items of lesser importance, which finally led to the request for the establishment of this Board.

It is of importance in passing to note that it is admitted by both parties to the dispute that during the past year or more there is some history of recurring work stoppages and slow downs. The Company mentioned these as indicating lack of control by the Union of its members, and as a reason why no form of closed shop should be recommended under the circumstances. The Union agrees that there have been unjustified work stoppages and slow downs; but say that they have consistently exercised their influence against such practices and ask for some added form of union security so that they may better co-operate in avoiding such disturbances in the future. They tendered to the Board letters and notices in support of their statement that they have been opposed to such stoppages in the past.

It is unnecessary to more than note the fact that there have been stoppages and slow downs. It is no purpose of this Board to inquire into the details for the purpose of assessing any fault therefor, but it is desirable to sufficiently know the facts to make recommendations which might be of assistance in avoiding any recurrence in the future.

The Union agreed with the suggestion that in the case of a work stoppage, slow down, or other dispute, the Union as Collective Bargaining Agent for the employees should not be neutral but take a definite stand and lend its active co-operation toward the adjustment of the trouble.

Discussion of the Dispute

Both parties submitted carefully prepared and detailed written briefs in support of their position on the matters in dispute. The question of closed shop and union shop was discussed at length by both parties, both as a matter of principle and as applied to the circumstances of the particular case. Under the circumstances here, it is not necessary to discuss the elaborate arguments for and against a closed shop voiced before the Board. Expressions of opinion from various sources were cited both for and against this principle. The circumstances at the present time make it undesirable to recommend the institution of any provisions which would or might limit the man-power otherwise available as employees. The Company is fully engaged in the manufacture of tires, tubes, accessories, and other rubber products all for military or essential civilian use. Any provision for a closed shop or union shop which made membership in a Union a condition of employment might tend to limit the available man-power. At this time this is undesirable.

Maintenance of Membership Provision

As an alternative to a union shop provision some form of maintenance of membership is asked. A maintenance of membership provision is not a provision for a closed shop or a union shop. Features of a closed or union shop provision which are usually most severely criticized are absent. It does not give the union a monopoly of employment in the company covered by the agreement, and it does not make membership in any organization a condition of employment. It may take various forms, but it should be an ingredient of all that at the outset a period, possibly 15 to 30 days, is provided in which every employee may exercise individual freedom of choice to be a member or not to be a member of the union for the term of the agreement. Within such period those employees who are members of the union may elect to retire from membership. Employees who are not members may join with full knowledge that, having joined, they are bound, subject to the provisions of the agreement, to remain members in good standing for the term of the agreement. If freedom of choice is so given to each employee in this respect it may not be unreasonable to expect employees who are members of the union at the termination of the period of election to accept the responsibility of remaining as such and supporting the union chosen as their bargaining agent during the term of the contract entered into by the union on behalf of the employees with the company.

It is unnecessary and undesirable with the limited inquiry available here to express any opinion or recommendation based on principle. It may be dealt with in the light of what seems desirable on the facts of this particular situation. It is evident that any steps which would result in strengthening control of stoppages and slow downs would be of assistance. The Company is of opinion that no measure to strengthen union security would be of

assistance to this end. It points out that the Local Union is not separate from, but in fact is made up of, its members, who are employees; that since 80 per cent of the employees are members of the Union the measure of control which the Union is willing or able to exercise is evidenced by past experiences. On the other hand the Union states that any measure tending to strengthen union security will better enable it to control its membership in preventing unnecessary stoppages or slow downs, and in co-operating in more efficient production.

Without expressing any view as to what result might be expected under the circumstances here, the Union should be taken at its word and given an opportunity for a trial period to demonstrate to what extent it can fulfil its objective. This should be for a period of one year. If at the end of that time it appears that such a provision has not materially contributed to the desired end, the Company might then be justified in declining to renew such a provision. In any event, by accepting a maintenance of membership provision for such a limited period it should not at the end of the term be treated as a precedent or an admission by either party in negotiating any new agreement.

In view of abnormal conditions existing at the present time, and, particularly, in view of the shortage of manpower and replacements, any maintenance of membership provision should be subject to several conditions:—

(*a*) Certain existing orders in council affect the right of the Company to engage or discharge, and of employees to accept or leave employment with the Company, without the permission of Selective Service authorities. Any provision in the agreement should, and would, be subject to the provisions of all orders in council regulations or statutes which from time to time might affect the right either of the Company to engage or discharge, or of employees to take employment with or leave the services of the Company;

(*b*) In any case the Company should not be required by reason of any maintenance of membership provision to discharge any employee whose services are irreplaceable. The question as to whether the services of any such employee can be reasonably replaced should primarily be for the Company, but in case of dispute between the parties on this point the matter should, if necessary, be dealt with as a dispute in accordance with the provisions of the agreement between the parties or the law applicable thereto.

As a matter of trial the Board recommends the inclusion of a maintenance of membership provision subject to the conditions mentioned and for the limited time suggested.

Check-off

As to any system of check-off of union dues and assessments annexed to or as complementary to any provision for union security, the Board makes no recommendation. In principle various arguments are advanced pro and con.

At the present time the Company on proper authority makes certain deductions from wages for other purposes. There is no doubt that the deduction of union dues would somewhat add to the Company's clerical work. Divorced entirely from any question of principle, and without relation to the request of the Union, as a Union, but based on the request of individual employees as such, it is recommended as a measure of co-operation that upon individual employees filing with the Company revocable orders or assignments in satisfactory and sufficient form, that the Company give effect to the provisions of such orders or assignments while in the Company's hands unrevoked, in so far as they may relate to union dues but not including any assessments or fines which the Union might under its Constitution, or otherwise, purport to levy on its members.

List of Eligibles

One of the minor points of difference between the parties related to the eligibility of certain employees for membership in the Union as the collective bargaining agency recognized by the Company. These concern (*a*) several guards said to number seven. The facts show that these men are sworn in as constables, and while they do not carry arms these are available in case of necessity, and it is conceivable that occasions might arise where their interest as Union members might be in conflict with their duties.

The Board recommends that persons in this category be not considered eligible for membership.

(*b*) Some five employees in the Product Control Laboratory: It appears that they act mainly as batch testers.

The Board holds the view that there is nothing so confidential in the nature of their employment as to exclude them from union membership, and they should be considered eligible for membership.

Job Progression

The parties do not appear to be far apart on this question. The union recognizes the necessity for qualification, and it is clear that the Company has in mind the desirability of recognizing the faithful service of employees with long seniority so far as is consistent with

efficient operation. It would seem much more important to approach questions of this kind as they arise with a measure of co-operation than to endeavour to lay down in precise terms any rigid rule which should be applied in all circumstances. The Board does not feel it necessary to make any further recommendation in this respect.

The Board desires to express its appreciation to both parties for the careful and complete manner in which they have submitted their views and for the spirit of co-operation shown in seeking a conciliation of their differences of view.

Dated at Toronto this 31st day of March, 1944.

Minority Report

In the Matter of the Industrial Disputes Investigation Act and in the matter of a dispute between the Dominion Rubber Company, Limited, and Local Union No. 80, United Rubber Workers of America.

To:
The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

I have read the report of my fellow members of the Board and I wish to concur in the statements of fact and recommendations contained therein with one exception. I am unable to recommend to you that a maintenance of membership clause be contained in or form part of any bargaining agreement between the Company and the bargaining agent of the Employees Local Union No. 80 of The United Rubber Workers of America.

Many of the arguments against the closed shop apply to the maintenance of membership provision. The evolution of this clause, its workings and the experience of the companies operating with it in force in the U.S.A. are fully set forth in "Maintenance of Union Membership" by Bryce N. Stewart and Walter J. Cooper, published in 1943 by Industrial Relations Counsellors Inc., New York City, and I can do no better than refer you to this work.

The Dominion Rubber Company voluntarily recognized Local 80 of the United Rubber Workers of America in 1939 as bargaining agent on behalf of the employees. This recognition, at a time when it was not compulsory, must have greatly strengthened the union as a force for good and at the present time the union has a membership of approximately 80 per cent of the qualified employees of the company. No doubt the Company expected an improvement in relations on granting recognition to the union. This has not been accomplished and there has been endless trouble since that time with sit-downs, slow-downs and lack of co-operation, and the results have been very disappointing.

The Union now seeks a closed shop or a maintenance of membership clause. The Union's actions do not appear to have contributed towards any improvement in labour relations between the Company and its employees which would justify the Union in asking for this extension and which by its operation has the effect of calling upon the Company to maintain and bolster the ranks of the Union and to recruit and maintain its membership rolls.

The Company would be obliged to see that its employees maintained membership in the Union under penalty of loss of employment. It would be forced to discharge an employee who might at any time during the course of his employment alter his views regarding the value of his membership in this particular Union or disapprove of the actions of those in authority in the Union. Should such employee at any time refuse or neglect or be unable to pay dues to the Union and desire to withdraw therefrom the Company would be obliged to dispense with the services of such person who may be one of its very satisfactory employees. To place such a burden on the Company, particularly with the present existing labour shortage, does seem unfair.

The right of a workman to belong to a union of his own choice implies the right to leave it. He should be under no obligation to explain the reason for his choice to anyone and all of our labour codes and statutes recognize and give effect to this principle. It is well established that compulsory membership in any organization is undesirable.

A maintenance of membership clause would not in my opinion solve the difficulty existing here. It would be, I believe, generally unworkable and would give rise to many problems dealing with strictly union matters in which the Company would be called upon to enforce the provisions of the clause and I therefore cannot recommend at this time and under present conditions that the Company be requested to accept a maintenance of membership clause, thereby recognizing and acknowledging something to which it has declared itself opposed in principle.

Dated at Waterloo, Ontario, this 22nd day of March, 1944.

Report of Board in Dispute between Direct-Winters Transport, Windsor, Ont., and its Employees

On April 15, the Minister of Labour received a unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between Direct-Winters Transport, Windsor, Ont., and its employees, members of Local 880, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (L.G., April, 1944, p. 480).

The personnel of the Board was as follows: Honourable Mr. Justice J. G. Gillanders, Supreme Court of Ontario, Toronto, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board; Messrs. J. L. Cohen, K.C., Toronto, Ont., and Gordon P. Dickson, Windsor, Ont., appointed on the nomination of the employees and employer respectively.

The report of the Board follows:

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a dispute between Direct-Winters Transport (employer), and its employees, members of Local 880, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (employees)

To:

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

The Board of Investigation and Conciliation established by you in this matter in pursuance of s. 65 of the Industrial Disputes Investigation Act begs to report as follows:

Sittings of the Board were held in Windsor and Toronto. At the sittings in Windsor held on the 23rd and 24th instant representatives of the Company and the Union attended before the Board and fully discussed with the Board the matters in dispute.

The Company was represented by Wilfred H Male, General Manager; William T. Chapman, Personnel Manager; Edward G. Keifaber, Windsor, Branch Manager.

The Union was represented by Frank Fitzsimmons, Detroit, International representative of I.B. of T.C.W. and H. of A.; Saul Sniderman, Detroit, representative of Joint Council 43 of the Teamsters Union; Andrew Petrozzi, Windsor, Business Agent of Local 880.

The Dispute

From discussion with the parties it emerged that the main matters in dispute were:

(1) The demand by the Union for a collective bargaining agreement including a union shop clause;
(2) A complaint of nine employees that they should have been paid a Christmas bonus of $25.00 each;
(3) A complaint that seniority was not properly recognized and, in particular, that two employees had been discriminated against by being denied runs which were given to junior employees.

The Facts

The Union has no written collective bargaining agreement with the Company at the present time. In March, 1943, a general work stoppage involving four transport companies occurred in Windsor which lasted for three days. Following negotiations which commenced during the summer of 1942 the Union entered into written collective bargaining agreements dated sometime around April 1, 1943, with three companies engaged in somewhat similar transportation business operating in the same locality as the company here concerned. This Company, and one or more other companies engaged in similar business, did not at that time enter into written collective bargaining agreements.

Prior to December, 1943, there were some desultory negotiations by correspondence between the Union and the Company, and in December the Union advised the management that it was desirous of obtaining an agreement containing a union shop clause. After Christmas the matters in dispute between the Union and the Company were aggravated by the complaint of nine men who claimed they should have received a Christmas bonus.

The Company has in effect a bonus system based on merit by which a Christmas bonus of $25 is paid to employees who, in the opinion of the Company, have met certain standards and requirements. The complaining employees felt that there was some discrimination by reason of their participation in the strike which had taken place in March, 1943. This was denied by the Company.

On January 3, 1944, twenty-eight employees, including drivers and warehousemen, went on strike. This continued for forty-two working days. Of the twenty-eight employees on strike twenty-four were members of Local 880, and it is said that the other four were members of Local 299 in Detroit, Michigan. The employees returned to work on arrangements being made to establish this Board.

After the matter was fully discussed with the parties the Board felt that it was highly desirable to effect conciliation if possible, and that

the attitude of the parties encouraged this approach. The Company representatives on their part stated that they had been and were prepared to recognize the Union as the bargaining agent for its eligible employees in the Windsor area, and were prepared to enter into a written collective bargaining agreement in similar form to that existing between the Union and three transportation companies operating in Windsor who were among the Company's competitors. The Union pointed out that the agreement with these companies having been made about April 1, 1943, would be open for re-negotiation in the near future, and that in addition to some matters of wages it was desired to negotiate with these companies for further provisions respecting (*a*) recognition or security of the Union, and (*b*) seniority.

After some negotiations it was agreed by both parties that the Company would now enter into an agreement similar in form to that existing with the other transportation companies mentioned for a period of one year with a provision that in the event that the Union at any time during the life of this agreement should negotiate a new collective agreement with the three other companies mentioned varying the terms of this agreement either as to (*a*) recognition or security of the Union, (*b*) seniority, the Union would have the right on thirty days' notice in writing to re-open for re-negotiation such clause or clauses in this agreement as might relate to (*a*) or (*b*) above. It was further agreed that in the event of negotiations with any of the other three companies the Union agreed to notify the Company and to consent to the Company, if it desired, participating in the negotiations with the other companies in which case in the event of amendments of the existing agreements respecting (*a*) or (*b*) above, the amended provisions would automatically replace the comparable clause of the existing agreement with the Company. The Union expressed themselves as desirous of arriving at a settlement, but demanded that a final and definite answer be given before adjourning on all matters in dispute. The Company further consented that the complaints (1) respecting the payment of Christmas bonus to nine employees, and (2) the discrimination against two drivers, would be treated as current disputes and dealt with under the grievance procedure set out in the agreement made and to be engrossed and executed.

Clauses covering the contentious matters were drafted, amended and settled with the assistance of Board members, and the whole matter was finally agreed to by both parties. The hour was then rather late, and there being no means immediately available to have the agreement arrived at engrossed and executed, both representatives of the Union and of the Company kindly offered to have it engrossed overnight and meet the Board on the morning of the 24th to have it executed. It was finally left with representatives of the Company to be engrossed and presented for signature the following morning. On the 24th the Company representatives presented to the Board engrossed copies of the agreement executed by the Company. When Union representatives arrived, Mr. Sniderman, speaking for the Union, informed the Board that the Union proposed to "renege" on the agreement arrived at the evening before, and did not propose to execute the engrossed copies then awaiting signature. He stated that on considering the matter overnight the Union felt that it was gaining nothing by signing the agreement, and that the Company was attempting to dominate the trucking industry in the City of Windsor. It appearing useless and undesirable to continue efforts of conciliation, the Board adjourned.

Recommendations

Under the circumstances the Board unanimously recommends that the parties enter into a collective bargaining agreement in the form and containing the provisions to which both parties orally agreed in terms before the Board, a copy of which agreement executed by the Company is attached to this report.

All of which is respectfully submitted.

Dated at Toronto, this 29th day of March, 1944.

Report of Board in Dispute between Dominion Engineering Works, Limited, Longueuil and Lachine, P.Q., and its employees

On April 1, the Minister of Labour received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Dominion Engineering Works, Ltd., Longueuil and Lachine, P.Q., and its employees, members of Lodges 1660 and 1596, International Association of Machinists (L.G. March 1944, p. 288).

The personnel of the Board was as follows: Mr. F. W. Edge, Montreal, P.Q., chairman, appointed on the joint recommendation of the other two members of the Board; Messrs.

Hector M. Sparks, Hampstead, P.Q., and George Smith, Verdun, P.Q., appointed on the nomination of the employees and employer respectively.

Attached to the Board's report was an agreement, entered into between the company and the applicant union, which resulted from the conciliatory efforts of the members of the Board. Among the points at issue in the dispute covered by the agreement were seniority, classification of employees, settlement of disputes, staff reductions and dismissals. The agreement between the company and the union is summarized in the article entitled "Recent Collective Agreements" appearing elsewhere in this issue.

Conciliation Work of the Industrial Relations Branch during April, 1944

IN April Officers of the Industrial Relations Branch were called on to deal with 47 industrial disputes and other controversial situations affecting 64 different establishments and involving 26,160 workpeople. Of these 28 were disputes which originated during April in 33 separate establishments, while 19 were "old" disputes in which settlements had been pending at the end of March.

Statistical analysis showed that the situations handled occurred in the following industries:—

MINING:	
Coal	4
Metals	1
MANUFACTURING:	
Animal foods	2
Metal products	18
Fur and leather, etc.	2
Textile, clothing products, etc.	2
Shipbuilding	1
Non-metallic minerals, chemicals, etc.	1
TRANSPORTATION AND PUBLIC UTILITIES:	
Steam railway	4
Water transportation	4
Electric railways and local bus lines	2
Air transportation	1
Miscellaneous	4
LIGHT, HEAT AND POWER	1
Total	47

Classified as to type of situation, the disputes dealt with by officers of the Industrial Relations Branch were as follows:—

NATURE OF DISPUTE:	
Strikes	8
Threatened strikes	2
Controversies	21
Arbitrations	5
Requests to conduct consent votes	7
Services of Commissioners	4
Total	47
PREDOMINANT CAUSE OR OBJECT:	
Increase in wages	6
Union recognition	15
Increase in wages and union recognition	2
Discharge of workers for union activity	8
Union jurisdiction	3
Other union questions	7
Discharge of workers (other than in connection with union questions)	3
Unclassified	3
Total	47

A tabular analysis of the disposition and settlement of the above cases is given below:

DISPOSITION:	
Strikes terminated by mediation	3
Controversies terminated by mediation	1
Decision rendered in arbitration	3
Consent votes conducted	5
Industrial Disputes Inquiry Commissioner appointed under P.C. 4020	3
Signed agreements	1
Signed agreements and reference to N.W.L.B.	1
Verbal agreements	1
Dispute lapsed or called off	5
Referred to N.W.L.B. or R.W.L.B.	2
Referred to Wartime Labour Relations Board	5
Referred to provincial authorities	2
Other disposition	3
Pending	12
Total	47
SETTLEMENT:	
In favour of employees	4
In favour of employers	7
Compromise or partially successful	4
Indefinite or unterminated	24
Not known	8
Total	47
METHOD OF SETTLEMENT:	
Conciliation or mediation (a)	18
Direct negotiations	1
Arbitration	3
Technical service	5
Administrative action	1
Investigation only	11
Settlement pending	12

(a) Conciliation or mediation took place in a number of disputes which were unterminated at the end of the period.

The 47 situations to which reference is made above were disposed of under the provisions of the Conciliation and Labour Act, separately from those situations referred to elsewhere in this issue which were dealt with under the Industrial Disputes Investigation Act or the Wartime Labour Relations Regulations (P.C. 1003). In those situations where it was possible for conciliation to be successful, mediation succeeded in eleven instances and failed in only four.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver,

Winnipeg, Toronto, Ottawa, Montreal, Fredericton, N.B. and Sydney, N.S. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and North Western Ontario; four officers resident in Toronto confine their activities to Ontario, and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and two officers resident in Fredericton, N.B. and Sydney, N.S. represent the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Summaries appear below of some of the disputes in which mediation or the technical services of Departmental officers were extended during April, and also during March, (the latter were omitted from the April issue of the LABOUR GAZETTE).

Wood Factory Workers, Campbellton, N.B.—On March 1, 1944, the attention of the department was brought to a threatened strike at the plant of J. and D. A. Harquail Company, Limited, Campbellton, N.B., which was engaged in the execution of certain war orders. The situation was created by an alleged violation of the seniority provisions of an Agreement between the Company and Local No. 2539, United Brotherhood of Carpenters and Joiners of America, when the management laid off some 70 employees. Prompt action on the part of Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., averted a stoppage of work and a few days later Mr. Pettigrove arranged separate and joint conferences between the parties. Agreement was reached that 10 of the employees dismissed would be reinstated, and that 10 others having lesser seniority rights would be discharged. At the same time, a supplementary agreement was signed amending the Collective Agreement between the parties in respect of lay-offs and the composition of the Shop Committee of the Union.

Coal Miners, East Coulee, Alberta.—The Western Representative of the Department of Labour, Mr. F. E. Harrison, Vancouver, B.C., learned on March 3, that certain employees of the Atlas Coal Company, Limited, East Coulee, Alberta, were stopping 12 men from operating duckbill loading machines on development work. This action was being taken on "idle" days when the contract miners of the Company were not loading coal. A rotation of the work of the duckbill crews was demanded by the men, but the management of the Company refused this request on the ground that some of the men were not competent to handle the mechanical loading equipment. After appealing without success to officers of the Local Union, No. 7331, and to officers of District No. 18, United Mine Workers of America, Mr. Harrison proceeded to East Coulee on March 7. The following day he secured an Agreement clarifying local conditions under which both contract loaders and mechanical equipment would be used. This Agreement was later signed by both Union and Company officials with effect for the remainder of the year 1944. About 72 man-working days were lost during the course of the dispute which commenced on February 24.

Metal Products Workers, Toronto, Ont.—In mid-March a dispute arose between Addison Industries Limited, Toronto, Ontario, and their employees as represented by Local No. 516, United Electrical, Radio and Machine Workers of America. It was alleged by the Union that three employees had been discriminated against and dismissed because of their union membership and activity. Following a preliminary investigation by Mr. H. Perkins, Industrial Relations Officer, Toronto, it was decided that the circumstances warranted the appointment of an Industrial Disputes Inquiry Commissioner, and the Minister of Labour issued a Commission to His Honour Judge Ian M. Macdonnell of Toronto, under the provisions of Order in Council P.C. 4020. In his report the Commissioner stated that in his opinion the labour situation at the plant fully justified the investigation of the matters in dispute. However, he found that in the case of two of the employees in question there had been a necessity for staff reduction, and that the Company had been guided as far as possible by seniority constitutions in selecting the persons to be laid off. The third employee was found to have been attempting to organize on behalf of the Union in working hours and at her place of employment. She was, therefore, found to have been properly discharged in accordance with Section 6 of Order in Council P.C. 4020.

Coal Miners, Corbin, B.C.—A strike of 92 men employed by Mr. F. O'Sullivan on a coal strip operation at a mine in Corbin, B.C. occurred on March 10, 1944. All employees, who had become members of the United Mine Workers of America, District No. 18, demanded recognition and adjustment of their wage structure. Mr. F. E. Harrison, Western Representative, Department of Labour, Vancouver, held joint conferences in Calgary between the operator and District officials of the Union. The employer agreed to recognize the Union and conclude a contract. The Union officers then instructed the men to resume work, which commenced

on March 16. The parties were advised to submit the wage section of the new Agreement to the National War Labour Board for approval.

Shipyard Employees, Weymouth, N.S.—A group of 161 unorganized workers in the yards of the Leblanc Shipbuilding Company Limited, Weymouth, N.S., went on strike on March 16, 1944, in protest against what they considered an unwarranted delay by the Regional War Labour Board for Nova Scotia in dealing with an application for a wage increase. Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., discussed the situation with officials of the Regional Board and communicated with the management of the Company and spokesmen for the employees. The employees' representative was advised that the finding in their case could not be rendered until after a decision was reached by the National War Labour Board in connection with other shipyards in the Maritimes, but that any adjustments which might be made would be retroactive to the date of the employees' application. Work was resumed by most of the employees on March 17, and the remainder followed suit on the 18th.

Tannery Workers, Kingston, Ont.—On March 24, 1944, the Department of Labour was asked to investigate charges that the President of the Kingston Tannery Workers' Union (A.F. of L.) had been dismissed from the employ of A. Davis and Sons, Limited, Kingston, Ontario, for the reason that he was a member of or working on behalf of a trade union. A preliminary investigation was made by Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, who recommended the appointment of an Industrial Disputes Inquiry Commissioner under the provisions of Order in Council, P.C. 4020. His Honour Judge Ian M. Macdonell of Toronto was appointed as Commissioner by the Minister of Labour, but was unable to find that the employee had been dismissed because of his union activities. It was established in evidence according to the Commissioner's report that the man in question was discharged because he was absent from his work for substantial periods on many occasions, and that he failed to cease this practice after adequate warnings.

Aircraft Workers, Montreal, P.Q.—Early in April, 1944, Mr. Bernard Rose, K.C., was appointed by the Minister of Labour to act as Chairman of Arbitration Committees in connection with disputes between Montreal Aircraft Lodge 712, International Association of Machinists, and Canadian Vickers Limited (Aircraft Division) and Noorduyn Aviation Limited, Cartierville, respectively. Various grievances were dealt with which the parties had been unable to settle under normal grievance procedure. Some cases were withdrawn or dismissed after hearing, and in others decisions were rendered for or against the complainant employees. All decisions were accepted by the interested parties.

Metal Products Workers, Sarnia, Ont.—During the morning of March 27, 1944, about 475 employees of Electric Autolite Limited, Sarnia, Ontario, went on strike. It was reported to the Department that the employees, members of Local No. 456, United Automobile Workers of America, considered that the Company was unnecessarily prolonging negotiations and were not bargaining in good faith with a view to the conclusion of a Collective Agreement. The Union had been certified as bargaining agency by the Labour Court for Ontario during December, 1943, but there had been many postponements, and very little headway had been made on agreement as to some contract provisions. Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, proceeded to the scene of the strike and conferred with the interested parties. The Company agreed to recognize the Local Union as having been certified in accordance with all the provisions of the new Federal Wartime Labour Relations Regulations, on the understanding that the Union would withdraw complaints which it had laid against the Company with the Labour Court for Ontario. It was also agreed by the parties that negotiations for a Collective Agreement would be resumed on April 3, with the Regional Director of the Union participating. The employees then voted to resume work on the morning of March 29.

Metal Products Workers, Montreal, P.Q.—On joint request of the parties the Minister of Labour on April 25, 1944, appointed Mr. Bernard Rose, K.C., of Montreal, to act as Chairman of an Arbitration Committee to deal with a dispute between the Cambridge Machine Tools and Aircraft Supplies, Limited, Montreal, P.Q. and Local No. 528, United Electrical, Radio and Machine Workers of America. The dispute involved a complaint that an employee had been arbitrarily dismissed by a foreman without reasonable or proper cause. After full discussion of the case, the Arbitration Committee ruled that the dismissal had been unjust because the employee was acting at the time of the dismissal in his quality of Chairman of the Grievance Committee established under the Agreement between the parties. A decision that he should be reinstated in his former employment with payment for lost time was accepted by both the Company and the Union.

Union Representation Votes

Dairy Products Workers, Ottawa, Ont.—On March 7, 1944, a Union representation vote was conducted among employees of the Ottawa Dairy Company, in order to ascertain whether the workers desired to be represented in collective bargaining with their employer by the National Union of Dairy Workers, Local No. 2 (C.C.L.). The vote was conducted by joint consent of the parties under the supervision of Messrs. C. W. Rump and F. MacKinnon, Industrial Relations Officers, Ottawa. There were 134 eligible voters, of whom 127 cast their ballots. A total of 97 voted in favour of union representation and 29 against, while one ballot was spoiled.

Salt Plant Employees, Neepawa, Man.—By joint consent of the parties a union representation vote was conducted on March 2, 1944, among certain employees of Neepawa Salt Limited, Neepawa, Manitoba, under the supervision of Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg. A total of 53 out of 55 eligible voters cast their ballots unanimously in favour of representation for collective bargaining purposes by the Neepawa Salt Workers' Federal Union, No. 109 (T.L.C.C.).

Paper Products Workers, Saint Boniface Manitoba.—By joint consent of the parties a representation vote was conducted on March 31, 1944, among employees of Martin Paper Products Limited, Saint Boniface, Manitoba, under the supervision of H. S. Johnstone, Industrial Relations Officer, Winnipeg, as Returning Officer. The ballot was taken to determine whether or not the employees desired to be represented by the Printing Specialty and Paper Products Union, a branch of the International Printing Pressmen and Assistants' Union of North America, No. 87. There weree 58 workers eligible to vote, of whom 32 cast their ballots in favour of the union, while 19 voted against, and one ballot was spoiled.

Packing Plant Employees, Montreal, P.Q.—On March 10, 1944, by joint consent of the parties, Mr. F. LaFortune, Industrial Relations Officer, Ottawa, supervised a union representation vote among the employees of Canada Packers Limited in Montreal, P.Q., to ascertain whether they wished to be represented by a Plant Relations Committee or the Montreal Packing Plant Employees Federal Union, No. 66. There were 686 employees eligible to vote. The Montreal Packing Plant Employees' Federal Union, No. 66, secured 296 votes, as against 253 ballots cast in favour of a Plant Relations Committee, and there were 14 spoiled ballots. The company agreed to recognize as the collective bargaining agency the organization which received more than 50 per cent of the votes poled.

Metal Products Workers, Trenton, Ontario.—On March 24 a vote was conducted under the supervision of Mr. J. P. Nicol, Industrial Relations Officer, Toronto, to determine whether the employees of the Benedict-Procter Manufacturing Company, Limited, Trenton, Ontario, desired to be represented by the Amalgamated Silver Workers' Local No. 44 (A.F.L.) as collective bargaining agency. A total of 101 out of 104 eligible employees cast their ballots, with 91 voting in favour of the union and 8 in opposition. There were 2 spoiled ballots.

Metal Products Workers, Winnipeg, Man.— By joint consent of the parties a union representation vote was conducted on March 17, to determine the wishes of 58 employees of the North Western Brass Limited, Winnipeg, Manitoba, in regard to representation for collective bargaining purposes through the International Moulders and Foundry Workers' Union, Local 174. Out of 54 votes cast, there were 49 in favour of the union, 3 opposed, and two spoiled ballots. Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, supervised the vote.

Foundry Employees, Winnipig, Manitoba.—A Union representation vote was conducted March 17, to ascertain whether or not 104 employees of the Anthes Foundry Limited, Winnipeg, Manitoba, desired to be represented by the United Steelworkers of America, Local 239. Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, acted as Returning Officer. In the balloting 87 employees voted in favour of the union while 9 cast their ballots against union representation and two ballots were spoiled.

Food Products Workers, Saskatoon, Sask.—Voting to determine whether the employees of Canadian Egg Products Limited, Saskatoon, Saskatchewan, desired to be represented for the purpose of collective bargaining by Saskatoon Egg Products Employees' Union (T.L.C.C.), was conducted on April 12, under the supervision of H. S. Johnstone, Industrial Relations Officer, Winnipeg. The vote, which was taken by mutual agreement of the parties, resulted in 144 votes in favour of union representation, with four opposed and two spoiled ballots. There were 181 employees eligible to vote.

Garage Employees, Windsor, Ont.—By joint consent of the interested parties, Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, supervised a union representation vote among the employees of three garages in Windsor, Ontario, on April 27, 1944, to ascer-

tain whether or not the workers desired to be represented by the International Association of Machinists in collective bargaining with their employers. At the plant of G. Tate Easton Limited, there were 15 eligible voters, of whom seven voted in favour of the union, while eight voted against. Out of eight eligible voters in the employ of Abbey Gray Limited, six voted in favour of the union and two against. At Ambassador Motors Limited there were six eligible voters, all of whom voted against collective bargaining through the union.

Storage Plant Employees, Winnipeg, Man.—On April 10, 1944, a union representation vote was conducted under the supervision of Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, to ascertain if the employees of the North Star Cold Storage Company, Limited, Winnipeg, Manitoba, desired to be represented in collective bargaining with their employer by Local No. 235, United Packinghouse Workers of America. There were eleven persons on the voters' list and ten cast their ballots. The results were that five voted in favour of the union and four voted against, while one ballot was spoiled. The vote was conducted by mutual consent of the parties.

Aircraft Maintenance Workers, Portage la Prairie, Man.—A Union representation vote was conducted on April 22, 1944, among employees in the flight and maintenance hangars motor transport section and heating departments of the Portage Air Observer School, Limited, Portage la Prairie, Manitoba, to determine if the employees desired to be represented by a committee of employees affiliated with Lodge 764, International Association of Machinists. The vote was conducted by joint consent of the parties under the supervision of Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, as Chief Returning Officer. Out of 291 employees eligible to vote, 186 voted in favour of union representation, 63 voted in opposition and three ballots were spoiled.

Textile Products Workers, Toronto, Ont.—By joint consent of the parties, Mr. H. Perkins, Industrial Relations Officer, Toronto, supervised a representation vote on April 20, 1944, among employees of Pattons and Baldwins Limited, Toronto, Ontario. A total of 269 employees cast their ballots out of 297 eligible to vote. The results were that 142 voted in favour of the Pattons and Baldwins Workers' Council as against 123 in favour of the United Textile Workers' Union. Four ballots were spoiled.

Dairy Products Workers, Ottawa, Ont.—On April 25, 1944, Mr. D. J. Sutherland, Industrial Relations Officer, Ottawa, conducted a consent vote among certain employees of the Producers' Dairy Company, Limited, Ottawa, to ascertain if the workers desired to be represented in collective bargaining jointly by the National Union of Stationary and Operating Engineers, Local No. 1, and the International Union of Dairy Workers, Local No. 1. There were 95 persons eligible to vote, of whom 79 voted in favour of representation through the two unions and five voted in opposition.

Strikes and Lockouts in Canada During April, 1944

THE number of strikes and lockouts in existence in Canada for the month of April, 1944, showed a decrease of three as compared with the previous month but the number of workers involved and the time loss in man-working days increased sharply. As compared with April, 1943, the number of strikes and the number of workers involved showed a substantial decrease but the time loss in man-working days was greater. Preliminary figures show ten strikes in existence for April, 1944, involving 14,923 workers and causing a time loss of 126,609 man-working days, as compared with 13 strikes in March with 1,680 workers involved and a time loss of 3,080 days. In April, 1943, there were 37 strikes involving 32,496 workers and causing a time loss of 103,936 days.

For the first four months of 1944 preliminary figures show a total of 64 strikes, involving 33,438 workers and causing a time loss of 192,965 man-working days, as compared with 120 strikes, with 71,451 workers involved and a time loss of 325,774 days, for the same period last year.

During the month under review one strike of motor vehicle factory workers at Windsor, Ont., was responsible for nearly all of the workers involved and of the resulting time loss, as the other nine strikes on record involved few workers and caused little time loss.

No strikes were carried over from the previous month. Of the ten strikes commencing during April nine were terminated. Six resulted in favour of the employers, one was a compromise settlement and two were indefinite in result, work being resumed pending final settlement. At the end of the month, therefore, one strike was unterminated, namely, motor vehicle factory workers at Windsor, Ont.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information

has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. One strike of this nature, fur factory workers, Quebec, P.Q., one employer, May 12, 1943, which has been carried in this paragraph for some months, has now been reported by the union as terminated on March 31, 1944.

STRIKES AND LOCKOUTS IN CANADA, JANUARY TO APRIL, 1943-1944

Date	Number of strikes and lockouts		Number of workers involved		Time loss in man-working days
	Commencing during month	In existence	Commencing during month	In existence	
*January, 1944	26†	26	8,140†	8,140	23,408
*February, 1944	17	19	8,740	8,785	39,868
*March, 1944	11	13	1,635	1,680	3,080
*April, 1944	10	10	14,923	14,923	126,609
Cumulative totals	64		33,438		192,965
January, 1943	33†	33	19,860†	19,860	166,715
February, 1943	27	31	2,611	5,239	24,301

Cumulative totals	120		71,451		325,774

* Preliminary.

† Strikes unterminated at the end of the previous year are included in these totals.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is seldom encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such strikes is maintained in the Department and the figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1944

Industry, occupation, and locality	Number involved		Time loss in man-working days	Particulars†
	Establishments	Workers		
Strikes and Lockouts Commencing during April, 1944				
MINING—				
Coal miners, Florence, N.S.	1	50	50	Commenced April 12; against dismissal of three miners for refusal to perform a certain task; terminated April 12; conciliation, federal, and return of workers pending reference to Joint Adjustment Board; indefinite.
MANUFACTURING—				
Rubber and Its Products—				
Tire factory workers, Kitchener, Ont.	1	13	10	Commenced April 18; for increased wages; terminated April 19; return of workers; in favour of employer.
Tire factory workers, Kitchener, Ont.	1	40	15	Commenced April 19; against time standard for certain tires; terminated April 19; negotiations and return of workers pending investigation; in favour of employer.
Textiles, Clothing, etc.—				
Textile factory workers, Milltown, N.B.	1	(a) 36	72	Commenced April 27; against working under overseer transferred from another department; terminated April 29; conciliation, federal; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1944—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man-working days	Particulars†
	Establishments	Workers		
Strikes and Lockouts Commencing during April, 1944—Con.				
MANUFACTURING—*Con.*				
Metal Products—

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March, 1944, issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1943." The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British Ministry of Labour Gazette publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in February was 216, and 16 were still in progress from the previous month, making a total of 232 disputes in progress during the month, in which 102,400 workers were involved. The time loss in February was 272,000 working days. Of the 216 disputes beginning in February, 35 arose out of demands for increased wages, 79 over other wage questions, 2 on questions as to working hours, 30 on questions respecting the employment of particular classes or persons, 62 on other questions of working arrangements, 4 on questions of trade union principle, 4 were sympathetic strikes.

British India

The number of disputes beginning in the year 1942 was 694, the number of workers involved 772,653 and the time loss 5,779,965 working days.

United States

During March, 360 strikes began, in which 115,000 workers were involved. The time loss for all strikes in progress during the month was 415,000 man-days.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods

SAINT JOHN, N.B.—ATLANTIC SUGAR REFINERIES LTD. AND SUGAR REFINERY WORKERS' UNION NO. 20 (TRADES AND LABOUR CONGRESS OF CANADA)

Agreement reached following application for a conciliation board (see p. 620 of this issue). Agreement to be in effect from April 1, 1944, to March 31, 1945, and thereafter subject to notice. The company recognizes the union as the sole bargaining agent for its employees who are union members.

Overtime is payable at time ond one half for work in excess of the normal working day or days and for all work on Sundays and on five holidays. Vacation: one week with pay for those qualified.

Hourly wage rates, including the cost-of-living bonus, for some classes: watchmen 53½ to 59½ cents, coal bunkers 59 and 59½ cents, coal trimmers 55½ and 56½ cents, firemen 60½ and 64½ cents, engine room engineers 79½ cents, moulder 80½ cents, welder 77½ cents; masons, stoker repair man 72½ cents, machinists 77½ and 88½ cents, millwright 76½ cents, monorails operators 55½ cents; technicians, tube blower, 58½ cents, melt samplers 55½ cents, pump man 54½ to 58½ cents, filter operators 59½ to 65½ cents, clarifiers 59½ to 62½ cents, many other classes 53½ to 59½ cents, female workers 41½ to 59 cents. Grievance procedure is provided for.

Manufacturing: Rubber Products

ST. JEROME, QUEBEC.—DOMINION RUBBER COMPANY LIMITED, AND RUBBER WORKERS FEDERAL UNION, LOCAL 144.

Agreement reached following report of a board of conciliation (p. 620 of this issue). Agreement to be in effect from March 6, 1944, to March 5, 1945, and thereafter subject to two months' notice. The company recognizes the union as the sole collective bargaining agency for all hourly paid employees with certain exceptions. Checkoff: the company will deduct from wages and pay over to the union the union dues of any employee so authorizing them.

Hours: 9 per day, 5 on Saturday, a 50-hour week; for firemen, 8 per shift, a 48-hour week. Time worked in excess of these hours is considered as overtime. Work on Sundays (or a weekly day of rest assigned employees required to work on Sundays) and seven holidays is payable at time and one half. Jobs to be classified by the company as well as the determination of time standards. Any disputed standards are to be negotiated. Provision is made for seniority rights and for grievance procedure.

TORONTO, ONTARIO.—THE GOODYEAR TIRE AND RUBBER COMPANY OF CANADA LIMITED AND THE UNITED RUBBER WORKERS OF AMERICA, LOCAL 232.

Agreement reached following a board of conciliation and investigation and further negotiations. Agreement to be in effect from April 4, 1944, to April 3, 1945, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency. No discrimination or coercion to be used by the company or the union against any employee because of his union membership or non-membership. Checkoff: the company will deduct from wages and pay over to the union, union dues for those employees so authorizing them.

Hours: the standard weekly schedule is based on a 5-day week. Overtime is payable at time and one half including all work on Saturday afternoon and Sundays. Holidays: the company to continue payment for six or seven legal holidays. If required to work on such holidays, they will be paid at the regular rate in addition to the pay for the full day's holiday. A vacation with pay plan is in effect but details are not given in the agreement.

Wages: wage rates are as approved by the Regional War Labour Board on March 11, 1943, revised to include the cost of living bonus. These include minimum hourly rates of 55 cents for janitor service and similar unskilled jobs, 62 cents for all other male labour except mechanical classifications and 41 cents for female labour. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Metal Products

LACHINE, QUEBEC.—DOMINION ENGINEERING WORKS LIMITED AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 1660.

Agreement reached following the report of a conciliation board (p. 626 of this issue). Agreement to be in effect from March 27, 1944, to March 26, 1945, and for another year if the

prescribed notice is not given in 1945. The agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1943, p. 807, with certain changes:

Hourly wages: for trainees and improvers the rates are from 6 to 8½ cents higher, for engineers, 7½ to 8½ cents higher, for other classes 9 cents per hour higher than in the previous agreement; additional classees include toolmakers at 89 to $1.04, toolroom improvers at 64 to 84 cents; journeymen machinists, fitters, blacksmiths, electricians and millwrights at 89 cents pipefitters at 84 cents; specialists at 79 and 89 cents; inspectors at 64 to 94 cents; labourers at 53½ cents. Vacation: for employees with one or more year's service, one week with pay; for employees with five or more years' service, two weeks.

LONGUEUIL, QUEBEC.—DOMINION ENGINEERING WORKS LIMITED AND INDUSTRIAL ASSOCIATION OF MACHINISTS, LODGE 1660.

Agreement reached following the report of a conciliation board (p. 626 of this issue). This agreement replaces the one previously in effect and summarized in the LABOUR GAZETTE, December, 1942, p. 1480. The new agreement is to be in effect from March 27, 1944, to March 26, 1945, or 1946 if no notice given. It is similar to the one noted above for the Lachine plant of this same company, with certain exceptions:

Rest period: two ten-minute rest periods are allowed each day. No schedule regarding vacations is attached to this agreeement. The rates for trainees and for toolmakers, etc. are similar to those of the Lachine plant. The list of occupations is different in the two plants but comparable occupations in the Longueuil plant appear to have similar rates to those of the Lachine plant.

Manufacturing: Non-Metallic Minerals, Chemicals, etc.

NIAGARA FALLS, ONTARIO.—WELLAND CHEMICAL WORKS LIMITED AND UNITED GAS, COKE AND CHEMICAL WORKERS OF AMERICA, LOCAL 165.

Agreement to be in effect from November 4, 1943, to November 3, 1944, and thereafter from year to year, subject to notice. The company recognizes the union as the sole bargaining agency for the employees, and the union executives are to be employees of the company.

Hours: 8 per day, 48 per week; shift workers to be allowed 30 minutes with pay for lunch during their shift, but "in most cases it can be readily understood that the operators will necessarily continue the performance of their duties while eating meals." Overtime is payable at time and one half; all work on weekly day of rest and on six specified holidays is payable at time and one half. Vacation: one week with pay to employees with one year's service. The wage schedule forms part of the agreement but a copy was not received in the department. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Shipbuilding

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LIMITED AND THE BOILERMAKERS' AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL NO. 1.

Agreement reached following the report of a conciliation board (see p. 620 of this issue). Agreement to be in effect from March 23, 1944, to March 22, 1945, and thereafter subject to two months' notice. Employees who are or who later become union members must maintain their membership.

Hours: 8 per day on first shift, 7½ on second shift and 7 hours on third shift. Time and one quarter allowed on dirty work and certain other specified work. Overtime is payable at time and one half for first four hours and double time thereafter; double time for work on Sundays and holidays. Vacation: employees to be entitled to such annual vacations with pay as shall be prescribed by the National War Labour Board.

Hourly wage rates: loftsman $1.10, rivet tester leading hand $1.13, slab mechanic $1.10; plater, bumper operator mechanic, press operator mechanic, rolls operator mechanic, boilermaker, caulker, driller, rivetter, linerman $1; slab mechanic helper 80 and 90 cents; improvers in plater slab mechanic, boilermaker, caulker, rivetter and packer trades 77 cents for one month, 90 cents for next three months; punch and shear man, bolting-up machine operator, holder-on 86 cents; steel erector specialist 85 cents; reamer, countersinkers, rivet heater 80 cents; bolter-up, helpers to plater, punch and shear men, boilermakers, caulkers, drillers and reamers trades 77 cents, passer-boys 53 cents and 60 cents, loft boy and marker boy 53 cents. Journeymen leading hands 10 cents over journeymen's rate, journeyman chargehand 10 to 20 cents over journeyman's rate. An incentive bonus piece rate to be paid on a basis mutually agreeable to the parties and subject to government regulations. Second shift employees to receive 9 hours' pay for 7½ hours' work; graveyard shift employees, 9 hours' pay for 7 hours' work.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LIMITED, AND AMALGAMATED ELECTRICAL WORKERS, LOCAL 3, AMALGAMATED BUILDING WORKERS OF CANADA.

Agreement reached following the report of a conciliation board (see p. 620 of this issue). Agreement to be in effect from March 27, 1944 to March 26, 1945, and thereafter subject to two months' notice. This agreement is similar to the agreement covering boilermakers employed by this company, as summarized above, with the exception of the hourly wage rates which are: electricians $1.10, improver (during one year improvership) 90 cents, bridge crane operator 85 cents, specialist 77 cents for first month and 85 cents thereafter, helpers 60 to 77 cents. Journeymen leading hand $1.20, journeyman chargehand $1.20 to $1.25, apprentices in accordance with B.C. provincial government regulations.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LIMITED AND THE DOCK AND SHIPYARD WORKERS UNION OF VANCOUVER AND DISTRICT, LOCAL NO. 2.

Agreement reached following the report of a conciliation board (see p. 620 of this issue). Agreement to be in effect from March 24, 1944 to March 23, 1945, and thereafter subject to two months' notice. This agreement is similar to the agreement summarized above for boilermakers employed by this company, with the exception of the hourly wage rates, which are: shiprigger $1, boiler scaler 90 cents; tackle rigger, steel checker, docking crew, plastic

armour specialist, locomotive crane assistant, non-swinging boom truck operator, 85 cents; stager 80 cents; rigger helper or yard rigger, cement layer, steel racker and hooker-on, winchman, hawser crane signalman, truck operators, tractor operators and jitney operators, 77 cents; shipwrights and joiners helpers 60 to 77 cents; chipper, truck attendant, handyman, 70 cents, labourer 60 cents; journeyman leading hand 10 cents over journeyman's rate, journeyman chargehand 10 to 20 cents over journeyman's rate.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LIMITED, AND AMALGAMATED BUILDING WORKERS OF CANADA, LOCAL. NO. 1 (PAINTERS SECTION).

Agreement reached following the report of a conciliation board (p. 620 of this issue). Agreement to be in effect from March 27, 1944, to March 26, 1945, and thereafter subject to two months' notice. This agreement is similar to the agreement summarized above for boilermakers employed by this company, with the exception of the hourly wage rates, which are: brush painter 90 cents, brush (finish) painter $1, spray painter $1.05, spray and brush painters' helper 60 to 77 cents, journeyman leading hand 10 cents, journeyman chargehand 10 to 20 cents.

Construction: Buildings and Structures

HAMILTON, ONTARIO—HAMILTON CONSTRUCTION ASSOCIATION AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 18.

Agreement to be in effect from May 1, 1944, to April 30, 1945, and thereafter from year to year, subject to notice. Only union members to be employed, if available.

Hours: 8 per day, Monday to Friday, a 40-hour week. Where there is shift work, 8 hours' pay for 7 hours' work on the second and third shifts. Overtime is payable at time and one half; double time for work on Sundays and eight specified holidays. Hourly wage rate for carpenters and joiners: $1.01½. Provision is made for the settlement of grievances.

Transportation and Public Utilities: Electric Railways

SUDBURY, ONTARIO. — SUDBURY - COPPER CLIFF SUBURBAN ELECTRIC RAILWAY COMPANY AND CANADIAN BROTHERHOOD OF RAILWAY EMPLOYEES AND OTHER TRANSPORT WORKERS, DIVISION 269.

Agreement reached following the report of a conciliation board (see p. 620 of this issue). Agreement to be in effect from February 1, 1944, to January 31, 1945, and thereafter from year to year, subject to notice. Check-off: the Company will deduct from earnings of each employee and pay over to the union a specified amount for union dues, and the union agrees to supply to the Company, on its request, the authorization from each member for such check-off.

Hours: for armature winders, inspector, machinist, repairman, night sweeper and car cleaner, track foreman and lead hand, 10 hours; track extra and carpenter, 9 hours; motormen 10 hours except day shift on Refinery line 10½ hours, spares 10½ to 14 hours. The practice of paying motormen a minimum of 10 hours' pay for their assigned hours to be continued. Work on four specified holidays, at time and one half. Vacation: one week with pay for employees with one year's service; ten days annual vacation after three years' service.

Wage rates: armature winders $205.60 per month, inspectors $39.20 per week, machinist and carpenters 71 cents, repairmen 66 cents, operators and inspectors 61 cents, outside repairmen 56 cents, night sweeper and car cleaner 53½ cents, track foreman 66 cents, track lead hand 56 cents, trackmen (regular) 51 cents, motormen from 46 cents during first month to 66 cents after three years. Seniority rights and grievance procedure are provided for.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable to the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, page 86. Proceedings under this act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the act include the extension of two new agreements and the amendment of others, all of which are noted below. Requests for the amendment of the agreements covering the fine glove manufacturing industry throughout the province, building trades at Montreal and at Val d'Or and Amos and retail stores at Coaticook were published in the *Quebec Official Gazette* of April 1, building trades at Joliette in the issue of April 8; the manufacture of work gloves throughout the province and fine gloves also throughout the province and building trades at St. John and Iberville, garage and service station employees at Montreal, in the issue of April 22; barbers and hairdressers at Chicoutimi and at Valleyfield, in the issue of April 29

In addition, Orders in Council were published in the *Quebec Official Gazette* during April approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Vegetable Foods

BAKERS, MONTREAL

An Order in Council, dated April 5, and gazetted April 15, extends the term of this agreement (LABOUR GAZETTE, January, 1944, p. 70 and previous issues) to April 30, 1944.

Manufacturing: Fur Products

FUR MANUFACTURING INDUSTRY, QUEBEC CITY

An Order in Council, dated April 22, and gazetted April 29, amends the previous Orders in Council for this industry (L.G., November, 1940, p. 1201; Sept., 1938, p. 1042; Oct., 1939, p. 1065; Dec., 1941, p. 1572; May, 1942, p. 630; Sept., 1943, p. 1253) by providing for a vacation of one week with pay to employees with at least one year's service, and by providing that the cost-of-living bonus of 3.8 points be added to the basic wages or to the actual rates being paid individual employees if higher than the basic rate.

FUR MANUFACTURING INDUSTRY (WHOLESALE), MONTREAL

An Order in Council, dated April 20, and gazetted April 29, extends the term of this agreement (L.G., Jan., 1943, p. 87, Sept., 1940, p. 970) to July 1, 1944.

Manufacturing: Textiles and Clothing

CLOAK AND SUIT MANUFACTURING, PROVINCE OF QUEBEC

An Order in Council, dated April 5, and gazetted April 15, amends the previous Orders in Council for this industry (L.G., July, 1943, p. 989, and previous issues) by specifically including the cost-of-living bonus with wage rates. Apprenticeship is limited to two years for some trades and to three years for other trades.

Manufacturing: Printing and Publishing

PRINTING TRADES, MONTREAL

An Order in Council, dated March 28, and gazetted April 1, extends the term of this agreement (L.G., January, p. 70, and previous issues) to June 30, 1944.

Manufacturing: Metal Products

SHEET METAL PRODUCTS MANUFACTURING, MONTREAL

An Order in Council, dated March 28, and gazetted April 1, extends the term of this agreement (L.G., March, 1943, p. 340, Oct., p. 1381; Jan., p. 70, and April p. 496) to April 30, 1944. Another Order in Council, dated April 20, and gazetted April 29, extends the agreement further to July 31, 1944.

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL

An Order in Council, dated April 5, and gazetted April 15, extended the term of this agreement (L.G., Nov., 1941, p. 1424; June, 1942, p. 738, Nov., p. 1348; Jan., 1944, p. 70, March, p. 359, April, p. 496) to April 30, 1944.

Another Order in Council, dated April 20, and gazetted April 29, makes obligatory the terms of a new agreement between Canadian Welding Works Ltd., A. & S. Architectural Iron, Montreal Metalworked Products, Montreal Architectural Iron Works Ltd., Forgeweld Iron Works and United Steel Workers of America, Local 2366. The agreement to be in effect from April 29, 1944, to April 28, 1945, and applies to the manufacture of industrial and/or building ironwork and architectural iron and bronze and all other metals used architecturally or for ornamentation and also includes the erection of these products except structural steel. The agreement applies to the Island of Montreal, Ile Bizard, the Counties of l'Assomption, Terrebonne, Laval, Deux-Montagnes, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Chateauguay, Laprairie, Chambly, St-Jean and Iberville.

Hours: 44 per week. Overtime is payable at time and one-half; all work on Sundays and seven holidays, double time. Employees working on night shift to be paid 10 per cent extra. Minimum hourly wage rates including the cost-of-living bonus: mechanics 90 cents, fitters 80 cents, helpers (shop or field) 70 cents, erectors 90 cents. Vacation: one week with pay to employees with one year's service. Apprenticeship regulations are included.

Service: Public Administration

POLICE AND FIREFIGHTERS, SHERBROOKE

An Order in Council, dated April 5, and gazetted April 15, makes obligatory the terms of an agreement between the City of Sherbrooke and l'Association des Policiers-Pompiers de Sherbrooke, Inc. The agreement is to be in effect from April 15, 1944, to January 1, 1945, and thereafter from year to year, subject to notice.

Hours for police-firemen: day to be divided into two shifts, the day shift from 7 a.m. to 6 p.m., the night shift from 6 p.m. to 7 a.m., shifts to rotate every two weeks; one weekly day of rest. Overtime is payable at 60 cents per hour. Minimum weekly wage rates: lieutenant $34, sergeant $33, corporal $32.50, constable-fireman $26 to $31, painter $34, chief mechanic $33, hydrant inspector $31, fire prevention inspector $32.50, labourer-fireman $26, motorcycle driver $32. Telephone and radio employees work an eight-hour day with $27 per week for chief operator and $26 for operator. Vacation: One week with pay to employees with one year's service. Sick leave: one week with pay each year, which may be accumulated from year to year. Uniforms are supplied.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, THREE RIVERS

An Order in Council, dated March 28, and gazetted April 1, amends the previous Orders in Council for these trades (L.G., March, 1942, p. 353, Sept., p. 1098; Apr., 1943, p. 490, August, p. 1131) but does not affect the summaries already given.

BARBERS, MONTREAL

An Order in Council, dated March 28, and gazetted April 1, amends the previous Orders in Council (L.G., Oct., 1941, p. 1315, Dec., p. 1573; July, 1942, p. 857; Nov., 1943, p. 1530, but does not affect the summaries already given.

War Emergency Training

Progress in Enrolment—Industrial Training—Training for Armed Forces—Rehabilitation Training—Apprenticeship Training—Change in Name—Cumulative Enrolment

THE War Emergency Training Program provides the following types of training:—

(1) Pre-employment classes in vocational schools for men and women about to enter war industry;
(2) Part-time classes, principally for the upgrading of persons already employed;
(3) Training in plant schools;
(4) Special classes for foremen and supervisors;
(5) Training of enlisted men as tradesmen for the Army, Navy and R.C.A.F.;
(6) Rehabilitation training for persons discharged from the Armed Forces in the present war and referred for training by the Department of Pensions and National Health;
(7) Assistance to certain categories of university students whose services are needed in connection with the war effort.

War Emergency Training is carried on under agreements made by the Dominion Government with each province. The administration is decentralized with a Regional Director in each province. Training is given in technical schools, special training centres and in industrial plants. The provinces and municipalities supply the shop facilities of the technical schools to the Program free of charge. Provincial Governments also pay certain administrative costs and share with the Dominion in the cost of machinery and equipment purchased. All other costs are paid by the Dominion with funds from the War Appropriation.

On March 31, 1944, the War Emergency Training completed the fourth year of its operation. From its inception up to March 31, 1944, the gross enrolment in all types of projects has been as follows:

Training in Industry	213,118
Army Tradesmen	40,295
Navy	7,429
R.C.A.F. Tradesmen	64,184
Rehabilitation (discharged persons from the forces)	3,059
Students	5,373
Total	333,458

Industrial Training

During the month there was a further reduction in the enrolment in all types of industrial training, full-time pre-employment, part-time classes, and plant schools. By the end of March a further number of pre-employment centres had been closed and the number of plant schools still in operation was 30. Negotiations which had been under way for over a year with the coal mine operators in Nova Scotia and with the United Mine Workers Union reached a successful conclusion with the opening of a plant school in Colliery I, B, at Glace Bay, the first plant school to be started in a coal mine. It is supervised by a committee representing the mine operators, the United Mine Workers Union, the Provincial Department of Mines, and War Emergency Training Programme. The course of training consists of four months followed by two additional months at production work under the supervision of experienced miners. The instructors in the school were selected by the committee from skilled miners who before commencing their duties were given some units of the program's streamlined courses for foremen and supervisors. One half day per week is spent in related technical instruction. The initial enrolment was 16 trainees.

Training for the Armed Forces

There was practically no change in the nature and extent of the classes conducted for the Navy. There was, however, a further reduction in the number of standard army tradesmen enrolled, but this reduction was made up by an increase in the number of young soldiers referred for training. In the R.C.A.F. classes there was a substantial reduction in the enrolment both for the technical ground trades and for the pre-aircrew schools. This reduction will be still further accentuated in the next few months. So far as the technical ground trades are concerned, the training for

(1) Includes those graduates who, though actually placed prior to March 31, 1944, were not so reported until after March 1, 1944.

this type would entirely cease about the end of June.

Rehabilitation Training

The number of men and women discharged from the armed forces, applying for vocational training continues to show an increase and reached a peak total of 818 on March 31. A great majority of these are being trained in schools, many of them are taking business and commercial courses in private business colleges. Additional field representatives were appointed in several of the provinces to supervise this type of training. These representatives are charged with the particular responsibility for the training that will be given in industrial and commercial establishments. By contacts with employers in their local areas, they will ascertain training opportunities that are immediately available and in co-operation with the District Rehabilitation Board of the Department of Pensions and National Health, they will refer suitable applicants to these employers for training. Two classes to train prospective teachers and instructors for rehabilitation training, were completed in April—one at Hamilton for Ontario instructors and one in Calgary for instructors from the four Western Provinces. Additional classes of this type will be held, and as the need arises for opening rehabilitation training courses, the graduates from these teachers training classes will be put in charge.

Apprenticeship Training

Communications were sent to all provinces with regard to the terms of P.C. 8993 which gives authority for Dominion financial assistance to industrial Apprenticeship plans carried on under provincial supervision and jurisdiction, and which conform to the basic principles of Apprenticeship as outlined in the Order in Council. The response from the provincial governments indicates that agreements will be sought by many of the provinces with the Dominion Department of Labour to promote and extend Apprentice training. Apprenticeship Acts have been passed at the last session in Alberta, Saskatchewan, Manitoba, and New Brunswick.

Change in Name

By authority of Order in Council the name of the Training Program has been changed from Dominion-Provincial War Emergency Training to Canadian Vocational Training. This change was recommended by the Vocational Training Advisory Council to emphasize the national aspect of the Training Program and its gradual transition from its purely war emergency aspect to a somewhat more permanent and broader aspect in the post-war period.

Cumulative Enrolment for the Year

The cumulative total of those enrolled for all types of training in the fiscal year 1943-44, was 132,585 as compared with the cumulative enrolment of 134,206 in the preceding fiscal year. It is to be noted that the enrolment in the full-time pre-employment classes decreased from 36,742 to 17,523; in the part-time classes from 19,916 to 14,926. The enrolment in the plant schools increased from 10,686 to 19,893; foremanship classes increased from 20,752 to 26,088. The enrolment in the Army and Navy classes was practically unchanged, while the enrolment in the R.C.A.F. classes rose from 25,329 to 32,150. The number enrolled for rehabilitation training also increased from 1,196 to 2,056.

British Measures Aim at Stabilizing Coal Mining Industry and Preventing Outlaw Strikes

Coal Miners' Wages.—A government plan to stabilize coal miners' wages marked the termination of the protracted strikes that seriously cut into British coal production in recent months. The plan guarantees miners a minimum wage of $20 a week for four years and pay increases for pier workers and skilled men, conceded on condition that coal output be stepped up.

Outlaw strikes prohibited.—The government has put into effect a new emergency defence regulation to curb strikes under which anyone who foments a strike in an essential war industry will be subject to five years penal servitude or a fine of $2,000 or both. The right of trade union members to urge strike action at properly constituted meetings is not affected, but any action inciting to strike outside a regular union meeting is culpable. This measure was deemed necessary to prevent unauthorized interruption of work on the eve of the invasion.

Unemployment Insurance

Effect of Additional Amendments to Unemployment Insurance Act

IN an article appearing in the May, 1943, issue of the LABOUR GAZETTE (p. 640) a summary was given of the historical background of unemployment insurance legislation in Canada, and an outline of the administration of the Unemployment Insurance Act, 1940, from the date it became effective until March 31, 1943.

During the twelve months that have intervened there have been important amendments to the legislation and some notable developments in administrative techniques. An outline of those of particular interest is given below.

Scope of Act

One of the provisions of a bill to amend the Unemployment Insurance Act, 1940, passed by Parliament in July, 1943, and effective from September 1 of that year, broadened the scope of the Act by raising the "wage ceiling" from $2,000 a year (or slightly higher if increased earnings were due to the war) to $2,400, with the important proviso that where the contractual rate of remuneration is an hourly rate, a daily rate, a weekly rate, or a piece rate (including a mileage rate) such employment shall be insured, notwithstanding the amount of the remuneration.

Result of Raising Ceiling

The practical result of this amendment is that persons paid a monthly salary, for example, are insured if annual earnings are $2,400 or less, whereas for persons paid on an hourly rate, daily rate, weekly rate or piece rate there is no ceiling whatsoever. While it is not possible to estimate with any degree of accuracy the number of persons who are now covered by unemployment insurance legislation as a result of this amendment, it is known that many additional thousands of persons are now afforded this protection.

Extension of Coverage

Prior to September 1, 1943, employment by a public utility operated in connection with a municipality was subject to exception when certified to the satisfaction of the Commission to be permanent in character, whereas employment by a public utility operated as a private company was insured. This difference in treatment between public owned utilities and privately owned utilities gave rise to serious anomalies, and remedial action was taken when an amendment was passed restricting the exception in question. The effect of this amendment is that from September 1, 1943, employment in connection with a public utility, whether or not municipally owned and operated, is insurable regardless of the permanent nature of the employment. Thus, a public utility operated in connection with a municipality is placed in the same position as a public utility operated as a private company.

It is anticipated that after due study has been given to the problems involved, the scope of the Act will be extended to a number of employments presently excepted. In fact, considerable progress has been made already insofar as these studies are concerned.

In order to make possible the insuring of persons in these excepted employments as soon as the particular difficulties involved have been overcome, the Governor in Council has been empowered by an amendment to the Act, on the recommendation of the Unemployment Insurance Commission and the Unemployment Insurance Advisory Committee to provide, by regulation, for the inclusion of employments presently excepted from the provisions of the Act, without the necessity of waiting for an enactment by Parliament. This will be an important factor in making coverage under the Act keep pace with the solving of administrative problems and the perfecting of techniques necessary for the inclusion of employments at present outside the scope of the Act.

Several recommendations regarding extended coverage are now before the Unemployment Insurance Advisory Committee. These include a formula for insuring employment in lumbering and logging, a proposal to insure all government and municipal employment (temporary employees only are presently covered), and a proposal to require contributions for employment in certain phases of agriculture, and employment in horticulture.

Payment of Insurance Benefit in Cash

During the first two years benefit was payable under the Unemployment Insurance Act, payment was made by means of cheques issued from nine offices across the country. As a result of this procedure, a claimant received his first benefit cheque on his third reporting day, that is the twenty-second day of unemployment. This cheque was for three days' benefit (a waiting period of nine days being required prior to the registration of the first compensable days). Thereafter a claimant received a cheque each week, if he continued unemployed and entitled to benefit, but there remained this "lag" of one week between the last day for which unemployment was proved on a reporting day and the day on which he received a benefit cheque for that period.

Making Trial of Cash Method

It was considered highly desirable by the Unemployment Insurance Commission that some method of paying benefit be evolved which would eliminate this delay of one week.

Trial was given in one local office in February, 1944, to a system of payment of benefit in cash, which would permit a claimant to receive payment on his reporting day for days of unemployment proved on that day. In this way a claimant is paid up-to-date each week.

The trial proved entirely satisfactory and the system of paying benefit in cash is being extended as rapidly as possible to offices across the country. At present the local offices in Quebec, Montreal, Ottawa, Winnipeg and Vancouver are making payments in cash.

Briefly, the system requires that the claimant's ledger account be maintained in the local office. This account which is set up at the beginning of each benefit year, shows the number of days' benefit to which the claimant is entitled during the year, the rate of benefit and the number of days' benefit paid each period and the number of days remaining. Each reporting day the claimant's record of unemployment for the week is entered on the unemployed register. When the claimant is entitled to benefit a combined form of requisition for payment and receipt of benefit is completed by the interviewing officer, and the claimant signs the form as a receipt for payment. On presentation of this form and the unemployed register to the cashier, he (the cashier) verifies the information shown on the form of requisition and receipt for payment, and checks the signature of the claimant. If satisfied as to the correctness of the requisition, the cashier pays the amount shown as due.

As an internal check at the local office, the total of the copies of the requisitions retained by the interviewing officers is verified with the total of the requisitions paid, as listed by the cashier. At the end of each day, the original copies of the requisitions and the total amount paid are forwarded to one of nine offices across the country where the necessary auditing is undertaken.

The institution of payment of benefit in cash is regarded as an important step forward in perfecting the administration of the Act, and one which is particularly acceptable to benefit claimants.

Insurance Fund.—Contributions commenced July 1, 1941, and insurance benefit first became payable late in January, 1942.

As at March 31, 1944, the Insurance Fund showed the following position:—

Employer and employee contributions	$155,585,027 60	Benefit payments	$ 2,465,043 93
Government contribution	31,117,005 52		
Interest (not including adjustment for accrued interest and amortization)	5,339,463 76	Balance	189,576,452 95
	192,041,496 88		192,041,496 88

Activities of the Unemployment Insurance Commission

Statistical Report on the Operation of the Unemployment Insurance Act for March, 1944*—Effect of Additional Amendments of Unemployment Insurance Act—The Fund

THE number of claims for unemployment insurance benefit declined slightly in March compared with February, but remained well above the number recorded for March last year. A total of 10,667 claims were filed in local offices throughout Canada during March, as against 12,284 in February and 5,046 in March, 1943.

The effect of this small decrease was not felt immediately in the Insurance offices, since there is a lag of something more than a week between the receipt of a claim in a local office and its despatch to an Insurance office. Thus, 11,187 applications were forwarded to insurance offices during the month, where 11,069 claimants were considered entitled to benefit. Some of these were claims pending at the end of February. (See Tables 3, 4, and 5.)

Since all claimants and beneficiaries must sign the "live" unemployment register each week and many who signed had lodged their claims in previous months, the number of persons signing the unemployment register increased slightly, from 16,121 during the last week of February to 16,406 during the last week in March.

Table 1 Omitted

Registration of employers and insured employees which is tabulated each month in the LABOUR GAZETTE as "Table 1" under the section on the Activities of the Unemployment Insurance Commission, has been omitted in this issue. This tabular information is subjected to an annual adjustment in April, following the renewal of insurance books at the close of the fiscal year. The adjustment is based upon reports covering insurance book renewals. The reports from local offices are far from complete as this issue goes to press. It is expected that the revisions will be concluded in time for inclusion in the June issue of the GAZETTE.

* Introductory comment, also the base for Tables 3, 4, and 5 were supplied by Dominion Bureau of Statistics.

The Column "Interest on Investments and Profit on Sale of Securities" represents:—
(a) Interest received on due dates of the various Government bonds, with proper adjustments being made at the end of each year for interest accrued and amortization charges.
(b) Profit on sales of securities taken into account at the end of each year only.

The "Miscellaneous" column includes the following:

Penalties	$ 1,961 78
Contributions in respect of services in the armed forces	78,125 38
Miscellaneous	1,535 72
	$ 81,622 88

Applicants in Receipt of Unemployment Insurance Benefits to Comply with National Selective Service Mobilization Regulations

In future male applicants for unemployment insurance benefit will be required to present proof that they have complied with National Selective Service Mobilization Regulations, Hon. Humphrey Mitchell, Minister of Labour, announced early in April.

By an Order in Council passed on March 30, every male applicant will have to produce satisfactory evidence, such as a birth or marriage certificate that he is not a "designated man" under the Military Call-up—or, if he be a designated man, he must present the necessary documents to show that he has complied with Mobilization Regulations.

The provisions of the Order are an extension of the present nationwide check-up on all civilian men of military age who are subject to the regulations. Employers are at present checking the standing of men on their payrolls.

Similar proof of compliance has for some time been required of men seeking employment through an office of National Selective Service.

Procedure in Loss of Unemployment Insurance Books

The Unemployment Insurance Commission has announced that new instructions have been sent to local Employment and Selective Service Offices, advising of the procedure to be followed when an insurable worker loses his unemployment insurance book.

As the worker's book shows the number of contributions made during the current fiscal year by his employer and himself, the Commission has to take steps to secure reliable information on what contributions were recorded in any lost book, before deciding whether a person may be allowed credit in spite of the loss of the book. The insured worker must first file a "declaration of loss" and this must be supported by certified statements from each employer with whom the employee has been engaged since the preceding April 1. Where necessary the Commission's inspectors then verify the accuracy of the statements submitted.

Where for any reason the employer is not able to verify the employee's statement—as where records have been lost through fire—the case is referred to head office at Ottawa, and decision is made as to what allowance in regard to contributions may be made to the employee.

L. J. Trottier, Chairman of the Unemployment Insurance Commission, in commenting upon the revised procedure, stated: "While the Commission will deal as favourably as the law will permit where unemployment insurance books have been lost in order to avoid hardship for the insured worker, we cannot stress too strongly the importance of both employer and employee considering these books to be precious, and to be preserved in safety at all times. Contributors under unemployment insurance who lose their books cannot rely in all cases upon proving the standing of the book at the time it was lost, so that in consequence they may suffer if a book is lost through carelessness."

Employment and Unemployment

Summary

INFORMATION in this section regarding the employment situation in Canada is based upon reports from the following sources:

The employment situation at the beginning of March, as reported by employers.—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the *trend* of employment in Canada over a period of years.

There was a further contraction in industrial employment at March 1, according to returns received from 14,383 co-operating establishments with staffs aggregating 1,831,310 men and women, as compared with 1,844,190[1] reported on February 1.

The index number of employment (based on the 1926 average as 100) was 181·9 as compared with 183·2 in the preceding month and was ·4 per cent higher than at March 1, 1943.

Information is also embodied in this article concerning payrolls, which is furnished each month by the co-operating firms. The per capita average weekly wage of $32.23 showed an increase from that of $31.76[1] at the beginning of February, while at March 1, 1943, the figure was $30.74.

Report on employment conditions for April.—A summary of employment conditions for the month of April has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service Offices across Canada. These reports describe employment conditions in the Maritime, Quebec, Ontario, Prairie and Pacific Regions.

Applications for employment; vacancies, and placements, March, 1944.—From the Employment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

[1] Revised.

Reports of the Employment and Selective Service Offices during the four week period March 3 to March 30, 1944, showed practically no change in the average daily placements as compared with those of the four weeks ending March 2, 1944, and a negligible decrease in comparison with the five-week period February 26 to April 1, 1943. Though no outstanding changes were recorded, advances in placements over the four weeks ending March 2, 1944, were noted in trade, services, public utilities, construction and agriculture and decreases in forestry and logging, and manufacturing. When a comparison is made with the five weeks February 26 to April 1, 1943, the only noteworthy gain in placements was shown in forestry and logging although minor increases were recorded in trade, public utilities and agriculture. Marked reductions were in manufacturing, construction and services, the most pronounced being in manufacturing. Vacancies during the four-week period numbered 192,875. There were 172,461 applications for employment and 119,518 placements were effected in regular and casual employment.

Unemployment in trade unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

The statistical article summing up the information contained in these reports formerly run monthly in the LABOUR GAZETTE, will in future appear quarterly. The last monthly article was published in the February issue.

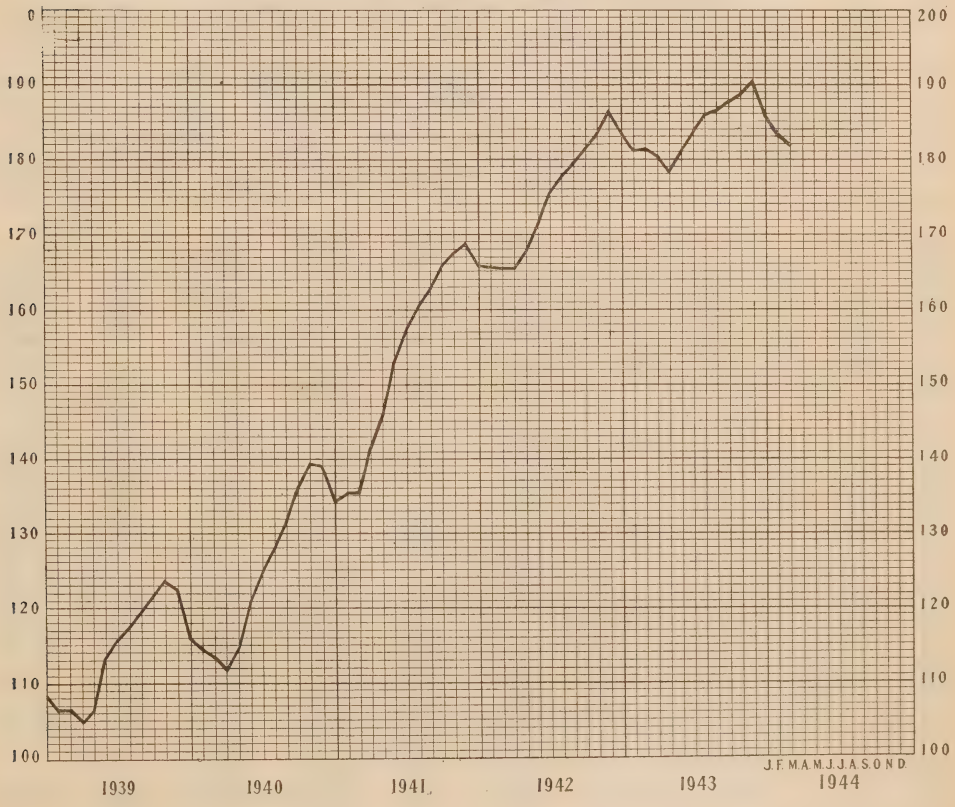
At the beginning of April the percentage of unemployment among trade unions was ·9 as compared with percentages of ·8 in January and 1·3 in April, a year ago. The April figure was based on returns received from 2,318 labour organizations with a total membership of 457,144 persons.

Unemployment as reported by the Unemployment Insurance Commission.—In the article *Activities of the Unemployment Insurance Commission* appears each month a statement showing the number of claims made each month for unemployment insurance benefit.

During March, 1944, 10,667 persons made claim for benefit, as compared with 12,284 in February, 1944, and 5,046 in March, 1943.

The Employment Situation at the Beginning of March, 1944 as Reported by Employers

EMPLOYMENT in the Dominion as a whole showed a further contraction at March 1, in a movement which was seasonal in character but was above-normal in extent, according to the experience of the period, 1921-1943. The 14,383 establishments co-operating in the Dominion Bureau of Statistics' latest survey of employment and payrolls reported a combined working force of 1,831,310 men and women. As compared with 1,844,190 at February 1, there was a reduction of 12,880 persons, or 0.7 per cent. On the other hand, the weekly salaries and wages paid at the date under review showed an advance, standing at $59,028,861, as compared with the aggregate of $58,569,775 disbursed by the same firms at the beginning of February.



The per capita weekly earnings of the persons in recorded employment rose from $31.76 paid in the preceding period of observation, to $32.23 at March 1, as compared with $30.72 at the same date in 1943. In the last 12 months, the index of employment has fractionally gained, and that of aggregate payrolls has increased by 4.3 per cent.

The general recession in industrial activity lowered the index of employment, on the 1926 base, from 183.2 at February 1 to 181.9 at the date under review, as compared with 181.5 at March 1 of last year. Since the loss rather exceeded the average at the beginning of March in earlier years, the seasonally-corrected figure also declined, falling from 190.3 at February 1 to 189.6 at March 1.

In a movement which is without parallel in the years since 1920, employment in manufacturing at March 1 showed a reduction. The loss was not on a large scale, but is par-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

ticularly interesting for the reason that it took place to a considerable extent among plants producing durable manufactured goods. In this class, some 4,000 men and women were laid-off by the co-operating establishments, while the decrease in the light manufactured goods industries approximated 300. Among the non-manufacturing classes, logging, mining, communications, construction and maintenance and retail trade reported curtailment, mainly of a seasonal character. The largest losses were in construction, from which some 7,000 workers were released. These declines and those in trade were greater than usual at the beginning of March in the record of 24 years. The decreases in the other industries mentioned, however, were below-normal in extent. On the other hand, services showed a moderate increase, and there was considerable improvement in transportation.

Payrolls

As already stated, the weekly payrolls reported at March 1 by the firms furnishing statistics aggregated $59,028,861, as compared with $58,569,775 distributed on or about February 1. The gain amounted to $459,086, or 0·8 per cent. The average earnings of the typical individual in recorded employment reached a new high, standing at $32.23, as compared with $31.76 at February 1, previously the maximum. The March 1, 1943, figure had been $30.72, and that in 1942, $27.92.

The latest survey shows that, when the statistics for financial institutions are included, the total number of persons in recorded employment was 1,896,259, as compared with 1,909,066 at February 1. The salaries and wages paid in weekly payrolls to these employees were given as $61,102,135, as compared with $60,637,979 disbursed at February 1. The per capita average for the nine main industries, including finance, was $32.22, as compared with $31.76 at the beginning of February, and $30.74 at March 1, 1943.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the eight leading industrial cities,

and gives comparisons as at February 1, 1944, and March 1, 1943.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. The report indicates that during the period of observation, there has been a general increase of 19 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these workers have risen by 49·1 per cent; including finance, the gain in employment from June 1, 1941, to March 1, 1944, amounted to 18·5 per cent, and that in payrolls, to 47·9 per cent.

From March 1, 1943, to March 1, 1944, there was a fractional increase in employment in the eight industries, accompanied by that of 4·3 per cent in the weekly payrolls. The explanation previously given for the greater rise in the latter than in employment may again be stated: (1) the concentration of workers in

TABLE II—EMPLOYMENT AND EARNINGS

Number of Persons Employed at March 1, 1944, by the Co-operating Establishments and Aggregate and Per Capita Weekly Earnings of such Employees, together with Index Numbers of Employment and Payrolls as at March 1, 1944, February 1, 1944, and March 1, 1943, Based on June 1, 1941 as 100 p.c.

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

the heavy manufacturing industries, where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work, (2) the extension of the system of paying cost-of-living bonuses to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their absorption into the basic wage rates as from February 15, 1944, (3) the progressive up-grading of employees as they gain experience in their work, and (4) the payment of higher wage-rates in a number of cases. It is interesting to note that almost for the first time in this record, the percentage gain in the per capita figure exceeds that shown in the aggregate payrolls in the 12 months' comparison; at March 1, 1944, the increase in the former was 5·4 per cent, and that in the latter, 4·3 per cent as compered with March 1, 1943.

Chiefly as a result of wartime demand for manufactured commodities, the growth in employment and payrolls in factories in the period of observation has been much greater than that in the non-manufacturing industries; where the index of employment in the former has risen by 34·8 per cent from June 1, 1941, that of payrolls has advanced by 72·2 per cent. The weekly earnings of the typical individual engaged in factory work have increased by practically 30 per cent, while the all-industries' average has risen by 27·6 per cent. The factors given above as influencing the all-industries' trends operate with greater force in the case of manufacturing.

The general expansion in employment and payrolls in the production of durable goods has been particularly noteworthy in the months for which data are available; in this class, the index of employment shows a gain of 55·4 per cent, accompanied by an increase of 102·1 per cent in the salaries and wages distributed between June 1, 1941, and March 1, 1944. Although there has more recently been some contraction in certain non-durable goods, the index number of employment in this group at March 1 was higher by 16·3 per cent than that indicated at June 1, 1941, since when there has been an increase of 41·3 per cent in the payrolls disbursed by the co-operating establishments.

In regard to the marked variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

lower than among those of greater experience. The matter of short-time or over-time will also considerably influence the reported aggregates and averages, which also reflect variations in the extent to which casual labour is used. The degree of skill generally required of workers in the industry is obviously also an extremely important factor.

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

[1]The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

Report on Employment Conditions for April, 1944

The following summary of employment conditions for the month of April has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service Offices across Canada.

THE manufacturing industry's steadily mounting manpower requirements have marked the past month. While a considerable volume of this demand may be attributed to the seasonal needs of packing plants and flour mills, as well as the stepping up of production of agricultural implements, the recent placing of large shell contracts by the Department of Munitions and Supply has been a significant factor.

Maritime Region

Agriculture—Unseasonable Spring weather has retarded agricultural work in most parts of the Maritime region. In Prince Edward Island there will be little activity for several weeks yet, and some farmers were granted extensions of their temporary permits to May 1. Nova Scotia, when the season is slightly more advanced, anticipates comparatively early planting and sowing, and at Truro temporary permits were cancelled as of April 20. In all parts, there is a heavy influx of farm workers returning from the bush.

Logging—With logging operations almost concluded, preparations for the Spring drive are receiving primary consideration. Many companies still have orders on file for choppers, but these are not heavy and are expected to dwindle shortly. In lower New Brunswick, where stream driving is now in full swing, the local supply of experienced drivers is being quickly absorbed, and the manpower deficiency is being met through the assistance of other offices in the northern part of the province, where driving will begin later.

Sawmills—As the cutting season terminates, the sawmills are commencing operations, and the return of agricultural workers to the land is making it extremely difficult to obtain the skilled men needed for this industry. An overall shortage is reported, and will tend to become more pronounced as the season advances.

Coal Mining.—The return of additional exminers from the armed forces and from other industry has resulted in a slight increase of production in the coal mines. However, while all mines are operating full time, experienced operators are continuingly in demand. New Glasgow is calling for another 71 certified miners and 41 labourers, and Amherst and Sydney also require skilled workers.

Labour shortage in the limestone quarries is threatening the supply of this stone required for agricultural purposes within the next few months.

Fishing.—All signs point to a successful fishing season. Heavy catches are reported, with prices high. Fishing gear, boats and factories are being put into order for the lobster season, opening May 1. Charlottetown reports that a large number of farmers in that vicinity are entering the lobster industry because of the high wages prevailing.

Fish Processing.—The fish processing plants now opening are filling the greater part of their labour requirements from the surrounding districts. There is the customary shortage of skilled fish cutters and handlers, but the labour situation is being watched carefully to prevent the development of any emergency. The lack of housing is the greatest problem in meeting the demand for helpers.

At Summerside the fish processing plants are calling for some 50 men and women, who will probably be supplied locally, and the Guysboro County plants in New Glasgow area which opened April 25, are also employing helpers from the vicinity. At Liverpool and Lockeport a shortage of experienced fish cutters exists and the present limited staff will not suffice in good fishing weather.

Manufacturing.—The lay-off of some 600 male and female workers from an Amherst aircraft plant was an outstanding incident in the manufacturing industry during April. A large number of those affected returned to agricultural pursuits and others experienced in aircraft work went to similar factories in Toronto and Fort William. There was no delay in transfers throughout the lay-off. A smaller decrease in staff took place at the shell shop of a New Glasgow plant. Of the 40 released there, the firm was endeavouring to place 20 in other work in the plant, and the balance will be placed elsewhere without difficulty.

The needs of the shipbuilding yards of the region continue to make heavy demands on the manpower market. Requirements of the Halifax Shipyards, for the most part in clearance, approximate 100 workers of all skills, and tradesmen's helpers are also in demand. Quite a number have been brought in from outside, and many others supplied through the activity of the local office, which is also giving every attention to the similar requirements of H.M.C. Dockyard. At Weymouth, the ship building company has received authority from the Regional War Labour Board to increase the wages of its employees, and an 8-hour day

is also in force. At Fredericton a barge-building project has started production with some 140 men, and it is expected that this number will be raised to 200 when final arrangements are concluded.

Farther north, Saint John reports that its manufacturing plants are in improved position insofar as general help is concerned. Some orders are anticipated following the mobilization survey, but the prospect is not particularly disturbing to the industries affected, and should be handled gradually. In all parts of the region there is a continuing request for female workers in textile and kindred industries, and heavy labour, as well as skilled, is in great demand.

Construction.—On the whole, the supply of construction labour is equal to the demand at this time, and the most immediate requirements are for projects nearing completion. In Halifax, unskilled and a few skilled workers are needed immediately to carry out a contract for repair and new construction for a local oil company. It will be impossible to secure this labour locally and the company's needs have been placed in clearance. At Minto the initial construction of a power generating plant is almost completed, and the men engaged at this work will be diverted to provide the labour for erecting another plant necessitated by expanding power demands. In the St. Stephen area, of the large number of workers released from airport construction the majority have returned to farming or fishing.

Transportation.—As the season advances transportation makes heavier demands. The situation on the Halifax waterfront seems fairly satisfactory at present, but the Longshoremen's Reserve Labour Pool is still calling for some 100 additional workers. At Sydney the opening of navigation has resulted in an appreciable falling off in freight by rail, and some 200 shippers and trimmers, seasonally employed at the coal piers, are now returning to this work from their winter in high priority industry. At Saint John preparations are being made for the opening of river navigation, and it is anticipated that the heavy import and export trade movements will call for the employment of some 2,000 workers. Some hundreds of track maintenance workers will also be needed by the railways, and these orders are being cleared through the Maritime provinces and Quebec.

Quebec Region

Agriculture—With slight modifying of cold weather during the past two weeks, there has been little advance in agricultural work, even in the southern part of the province. The maple syrup season has concluded, without any complaint of lack of workers, and while returned farm workers are busy with preliminary work it is not expected that any real activity will commence for another fortnight, while in many areas seeding will not begin before the latter part of May. The extension of temporary permits to agricultural workers varies according to the district, and in the farthest north these are being prolonged as late as May 31.

Logging—A temporary lull has occurred in logging operations as farmers and lumberjacks left the bush. In the majority of districts the log drives have been held up by the late Spring break-up, and are being planned for the period from the end of April into mid-May. Chicoutimi reports that there are still some 1,300 men in the bush in that vicinity, the majority engaged in pulpwood cutting and the balance on drive improvements. Only one operator in the Dolbeau area is asking for cutters, but there is a strong demand for men to work on preparations for the drive.

Throughout the lumbering districts the present pressing problem is to satisfy the demand for drivers, and a considerable shortage of skilled men is anticipated as the season advances. Campbell's Bay reports a heavy demand and Hull has orders for 100 men, of whom 20 have already been referred. In the Mont Laurier vicinity at least 300 will be needed, and Quebec has very few applicants available to meet the combined needs of local companies, totalling some 462 men.

In the Shawinigan Falls area loggers are returning for the drive, and at Rouyn the larger companies are beginning to hire a few of the 3,000 required. At Roberval, too, the Consolidated Paper has begun to assemble drivers, of whom they will require 1,200 and the Gagnon and St. Raymond Paper companies, as well as others in the neighbourhood, have similar needs.

Sawmills—Benefiting by the return of the woodsmen, most of the sawmills of the region are expanding their operations. Sufficient manpower for this industry is reported by Lachute and Rimouski, and Baie St. Paul also is well supplied for the time being. Mont Laurier will require some 75 to 100 men during May, and at Matane, where the sawmills will open about May 15, orders are also being placed. Many permits have been issued at Joliette, where a large number of mills will soon be in operation, and Rouyn operators have begun to hire a few of the 1,200 men needed for the industry there.

Mining—Little change is to be noted in the labour situation of the Mining industry, with the northern gold mines still short of men, and

eager to procure some hundreds for prospecting and development work. The exodus of farmers has led to an increased demand for underground workers in the lead and zinc mines at Campbell's Bay, and the fluorspar mine starting operations in that district will also require quite a few men.

Manufacturing—The general trend in the manufacturing industry throughout the region is toward increased labour demand, occasioned to an appreciable extent by the return of agriculturalists to their Summer duties. In Montreal the supply of labour to the packing plants is steady. A shortage in one fertilizing plant has been remedied by the part-time work of farmers from the outskirts of the city, and active recruiting for packing plants in Montreal and Toronto has been carried on in other parts of the region. The inability of one rubber company to obtain suitable help at its St. Jerome plant has led to the transfer of certain operations to Montreal, and this move has involved the hiring of 200 extra girls. The renewed operations of another plant has also created a demand for 150 men and the same number of women. The return of longshoremen to their regular work on the docks has created a serious shortage at a local ordnance works and full replacement has not yet been furnished.

At Chicoutimi the steady demand for local potmen continues. Two additional potrooms have been shut down indefinitely and the 150 men involved have been transferred to other rooms. Joliette reports a constant demand for steel workers, and at Levis a similar call persists for skilled men for the shipbuilding yards, which lost about 60 agricultural workers on April 29. The rubber works at St. Jerome are still calling for general factory labour, reporting a shortage of 463, of which 386 are females.

For the first time in months, the aircraft industry in Montreal is experiencing a decrease in employment. Certain changes in production are making necessary for one plant to lay off 2,000 workers almost immediately, the lay-off to be conducted over a 5-week period. After a lapse of about two months, a corresponding number will be hired. Another lay-off of some proportions is taking place at Quebec, where the shipyards are reducing their staff by some 470. Some 350 separation notices, on one week's notice, have been issued, but a new contract for three merchant ships will keep the remaining workers busy for an indefinite period.

Construction.—The anticipated Spring pick-up in construction has not as yet materialized, although in some sections there are signs of renewed activity. The building of two factories at Drummondville to begin shortly, will give work to labourers in that area, and the construction of a large warehouse at Riviere du Loup will engage the services of carpenters and labourers of that vicinity for several months. Chandler has referred between 50 and 60 labourers to National Defence projects during the month and Chicoutimi has despatched 100 unemployed on clearance to Maritime shipyards and Ontario industries.

Transportation. — Transportation's labour demands continue to increase as the season advances. Navigation on the St. Lawrence opened officially on April 25, with the arrival of three ocean liners. Three Rivers reports that 550 stevedores have obtained permits for loading jobs, and further workers for these duties will have to be recruited outside. The railways are preparing to recruit hundreds of maintenance men, and drivers are in demand for highway trucking and bus services.

Ontario Region

Agriculture.—In Ontario, as elsewhere throughout the Dominion, the backward Spring is delaying the opening up of the agricultural season. While the majority of local offices report a steady return of farmers from industry, the varying climatic conditions have resulted in agriculturalists from the dry areas of the province being released, and others from wet areas where operations are further delayed being retained in industry for the time being. Everything possible is being done to transfer men from their Winter employment to Summer activity without loss of valuable time in either field.

Logging.—Logging's demands on the labour market show a further sharp decrease during the period. Up the Ottawa valley the chief call is for skilled men for the Spring drive. Arnprior, Renfrew and Pembroke are still asking for experienced workers. Farther north, the "Sault" is also in need of drivers, while the exodus of farmer bushmen from Kapuskasing (where deep snow hampered operations temporarily) has been offset by a heavy influx of labourers from the province of Quebec.

Sawmills.—Repairs are the order of the day in the region's sawmills, where a shortage of labour is anticipated when production begins. The Arnprior mills alone are calling for 275 workers, of whom one-half are in view or placed, and the demand at Pembroke is similarly heavy. In the North Bay area steady streams of men are being fed to the 40 odd plants preparatory to opening up operations, and at Timmins, where mill repair work is under way, a considerable shortage of workers is predicted. In the vicinity of Belleville the operators propose to utilize the services of farmers whose work on the land will not begin until the middle of May.

Mining.—Dearth of labour in the mining field shows no abatement. At Sudbury, the manpower situation in the base metal mines is again serious, with no replacements in view for the departing agricultural workers, and others. Timmins is likewise handicapped by a lack of experienced miners, and employers are again taking on inexperienced workers.

Manufacturing.—A notable development in the manufacturing field was the marked tightening of labour supply during the past fortnight. As new contracts for war orders have been released and plants already working to capacity have geared themselves for all-out effort, it has become increasingly apparent that some plants will have to accept almost any kind of men available for training, and cosnequently there is a ready market open to intelligent labourers who wish to learn a trade. The recently announced placing of extensive shell orders is responsible for a considerable part of this mounting labour demand, but the greatest need at the moment is that of plants manufacturing agricultural equipment and parts, and the over-all shortage of heavy foundry labour noted has assumed serious proportions.

In addition to pressing demands for labour for vital war contracts, (which include the recent large shell orders placed with various manufacturers throughout Ontario and have created a need for some thousands of skilled and semi-skilled men and women) there is a general shortage of workers in all the manufacturing centres throughout the region. The pulp and paper mills share in this urgent need, with the Temiskaming mill reporting 150 vacancies and Hawkesbury 200, in their respective barking plants. The textile manufacturers are exigent in their call for workers, and shipbuilding and aircraft production maintain the same high level of orders as for some time past Lay-offs occurring during the period are so small as to offer practically no amelioration of the labour shortage.

Construction.—Increased activity in construction is for the most part confined to residential building, and the consequent demand for labour is gradually absorbing the surplus of carpenters and construction labourers, and even bringing about a shortage of painters, paperers and other building trades. For the time being, there is little prospect of projects of any magnitude getting under way in the province.

Transportation.—The call for transportation labour is steadily increasing. The needs of the lake boats have been well satisfied, but the railways are in immediate need of train and maintenance crews and general construction labour. Some hundreds are required in all parts of Ontario, and there is apparently no likelihood of procuring the requisite type inside the region.

Prairie Region

Agriculture.—With seeding under way in most sections of the prairies, the orders for agricultural labour are on the increase. Some local offices report that they have been able to balance orders with referrals, but others find this impossible, and the shortage predicted earlier is gradually materializing. Some alleviation of the man-power lack may be expected, however, with the return of farm workers from the packing plants at the end of the extension granted to holders of temporary permits.

Logging.—A shortage of men for logging operations persists throughout the prairie provinces. Apart from actual cutting, river driving and pulp peeling are still ahead, though these operations cannot be undertaken until the rivers open and bush conditions improve. In the Port Arthur area, Spring thaws have put an end to pulpwood cutting, and hundreds of men are holidaying in the Twin Cities prior to the river driving, for which, with other woods industries, 2,122 loggers are presently in demand.

Sawmills.—As a result of the lack of labour, the region's sawmills, now in operation, are running on one shift only, but it is hoped that two shifts will be feasible later, as logging crews supplement the present staffs. Some 50 or 75 men are needed for the mill at The Pas, and from 75 to 100 men are required for Fort Frances operations.

Coal Mining.—Coal mining has been somewhat retarded during the period on account of the loss of labour to agricultural work. Sufficient men remain for the operation of the mines at a production level which will take care of Summer fuel demands, but there is no surplus of labour in any area. In the neighbourhood of Edmonton a number of collieries have resumed operations recently, and it is probable that most of the surrounding mines will be reopened soon. About 200 miners have returned to agricultural pursuits, but there should be a sufficient staff available for the Summer months.

Mines in the Lethbridge and Red Deer areas continue to operate on short time, with some miners returning to agriculture, and others averse to the short week being referred to other employment. In the vicinity of Edson, too, the 4- or 5-day week prevails, but full crew is required to maintain the necessary production.

Base Metal Mining.—Shortage of skilled and unskilled workers for the base metal

mines is on the increase. Port Arthur reports that the labour turnover has resulted in a temporary abandonment of development plans and as a result the known ore reserves are being exhausted. The chief immediate need in that vicinity is for 216 muckers. Flin Flon's requirements are as urgent as ever, and Fort Frances is calling for additional heavy labour for the Steep Rock iron mines.

Manufacturing.—The most immediate manpower demand in the manuacturing industry of the prairies is for men equal to the heavy work of the packing plants and flour mills, and very few of the necessary physique are available. The Winnipeg offices report that for the past fortnight packing and cold storage plants have been receiving first attention: the press of work has necessitated the operation of two shifts in some plants, and there is an unprecedented demand for women workers. At Kenora the flour mill is operating 24 hours a day, seven days a week, with husky shippers hard to obtain, and in Moose Jaw there is a similar shortage. Prince Albert is also shorthanded, with its butchers working at night in an effort to catch up with the supply of meat on hand.

Edmonton's packing plants are in serious situation following the lifting of the ban on road transport, with the consequent flood of delayed shipments. To meet the emergency, all able-bodied men available are being referred to this industry. In Calgary, too, heavy shipments from country points have created a temporary rush during the past two weeks.

Other branches of manufacturing have not been so insistent in their calls on the manpower market. At Fort William, the aircraft plant's requirements remain stationary at 500. Fort William shares in the recent award of shell contracts, and approximately 450 workers (mostly semi-skilled) are being asked for by the shell plant. At Port Arthur, all departments of the shipbuilding yards are seeking replacements for departing agricultural workers: some 45 vacancies exist at present and marine electricians are also needed to step up production.

The region's textile trades, while still able to absorb workers, do not seem to be suffering from any great lack of labour. At Edmonton, an aircraft repair plant has received a subcontract for aero-parts, and can re-absorb quite a number of those laid off recently, as well as employing any available skilled engineers, machinists, mechanics, etc., of whom there is a continuing shortage.

Two lay-offs of minor proportions took place during the fortnight. At Moose Jaw 112 men and 113 women were released by the aircraft plant, the lay-off proceeding in an orderly manner, in small groups. Some 100 employees of one Regina industry were separated on April 22, and these should relieve the local labour situation, especially insofar as the demand for garage mechanics is concerned, as a number are former garage workers.

Construction.—Little general activity is evident in construction. Local projects are fairly well supplied with labour, and the boom in private building is absorbing any existing surplus. In the Port Arthur area, however, three large projects which will soon be under way will call for an estimated total of 1,800 construction workers, of whom the majority will have to be brought in from other regions.

Transportation.—As in all parts of the Dominion, transportation is stepping up its labour demands as Summer approaches. Many orders are being received from railway companies for the supply of maintenance-of-way labourers, but few are available at this time. There is a general shortage for the running trades as well, though this is being overcome to some extent by readjustment of schedules. Traction companies are experiencing difficulty in procuring men of the required physique and medical requirements. In general it has been possible to fill orders for water navigation and the greatest difficulty is the securing of stevedores and men to unload grain at the terminal elevators.

Pacific Region

Agriculture.—The agricultural labour situation in British Columbia presents no serious problems as yet. The transition from essential industries to the farms is being completed rapidly, and while there are light, scattered demands for farm helpers no emergency is foreseen at present. Vancouver and New Westminster report fairly heavy calls for experienced workers in the immediate vicinity, as well as for the more distant Fraser Valley districts, and Kelowna is looking for trained orchard helpers, who are not available.

Logging.—In the logging industry a definite shortage of labourers, chokermen and riggers still persists, with demands increasing and applicants decreasing as the season advances. In the southern interior, Cranbrook, Kelowna and Trail are suffering from the exodus of agricultural workers returning to the prairies. Kamloops is in similar plight, but Nelson reports that its operators are able to fill their demands locally for the first time in many months. On Vancouver Island the demand for unskilled and semi-skilled woodsmen shows little sign of abatement.

Sawmills.—As the season advances the sawmills of the region become more insistent in their call for labour reinforcements. The earlier shortages at Kamloops and Kelowna

have been accentuated as production increases, and at New Westminster, where the previous serious dearth of logs has been relieved, manufacturing is impeded by the lack of heavy labourers and certain skilled workers. Little use is being made of women, except in the veneer plants and planer mills of the district. On the Island, too, there is a rising demand for workmen for the mills, and no prospect of relieving the tight labour situation is in view.

Coal Mining.—The coal mining industry on the whole is well supplied with labour although a few orders for miners are as yet unfilled. The Princeton Tulameen Collieries ceased operations on April 30, with separation notices signed by company and men on April 22. Another colliery in the vicinity preparing to increase production, is ready to take over 30 of the retiring company's employees.

Base Metal Mining.—With the continuing exodus of agricultural workers from the base metal mines the demands of the industry have steadily increased. No improvement is reported in the labour supply situation in the smelting plant at Trail, and at Nelson base metal operations are continuingly shorthanded. One mine at Sandon has suspended operations on account of the burning down of the company's mill, and consequently about 25 men are available for employment elsewhere, but very few of these are miners or muckers, as the shortage of water power occasioned a lay-off some time ago.

Mines in the Princeton area are very short of underground workers, and the number supplied on clearance has been practically nil. Another 29 men have recently been released from the mercury plant at Pinchi Lake, and 12 of the company's old employees have been transferred to Kimberley. The Princeton office has been able to refer a few miners and muckers to the gold mines at Wells, but the quota has not yet been filled.

Manufacturing.—British Columbia's demand for workers for the manufacturing industry does not reach the proportions found in other parts of Canada, although a steady call for skilled and unskilled labour is constantly recorded. In Vancouver there has been slight change in man power requirements during the month, with the exception of a temporary increase in orders from the steel shipbuilding yards, where welders, sheet metal workers and ships' joiners are in demand, and from the wooden shipbuilding yards, which report a considerable shortage of experienced shipwrights. The Prince Rupert yards, too, are making continual calls for semi-skilled and unskilled men to replace agricultural workers, but have been able to retain the services of a number of fishermen.

Labour for the region's packing plants is scarce and New Westminster is calling for skilled mechanics and electricians. In Victoria the aircraft plants are making slight demand, and there has been a temporary slacking off in the call for women workers. Lay-offs from the Island's shipyards have been practically nil during the month, with the exception of some rivetting crews affected by a work shortage due to change-over in plan. The net result of previous lay-offs has not materially increased the number of unplaced applicants on file, as the majority, exclusive to those going to the Armed Forces, have been placed in other employment. A lay-off of women workers, mostly welders, is continuing at the local yards, and most of those involved have made initial claims for U.I.C. benefit.

Construction.—Construction continues active in the coastal region, with a perpetual demand for carpenters and labourers. An extensive program of private building, which is going forward in most districts of the region, is utilizing the services of building tradesmen of all types and creating a further need which is never fully satisfied. The only project of any magnitude presently under way, the dam being constructed at Brilliant, is almost completed.

Applications for Employment; Vacancies and Placements; March, 1944

REPORTS of the Employment and Selective Service offices during the four weeks March 3 to March 30, 1944, showed practically no change in the average daily placements as compared with the previous four weeks February 4 to March 2, 1944, and a negligible decrease in comparison with the five weeks February 26 to April 1, 1943. Advances in placements over the preceding four weeks in trade, services, public utilities, construction and agriculture were offset by declines in forestry and logging, manufacturing and mining, though the decrease in mining was slight. When a comparison is made with the five weeks ending April 1, 1943, reductions are noted in manufacturing, construction and services, the most substantial being in manufacturing, and increases in forestry and logging, trade and public utilities.

The accompanying chart shows the trend of employment since January, 1942, as represented by the ratios of vacancies notified and

of placements effected for each 100 applications for work registered at Employment and Selective Service Officers throughout Canada. It will be seen from the graph that the curves of vacancies and placements in relation to applications followed upward courses. The ratio of vacancies to each 100 applications being 111·8 during the four-week period ending March 30, 1944, in contrast to 103·7 during the previous four weeks ending March 2, and 108·9 during the five weeks February 26 to April 1, 1943. The ratio of placements to each 100 applications during the period under review was 69·3 compared with 67·6 for the preceding four weeks and 70·2 during the five weeks ending April 1, a year ago.

The average number of vacancies reported daily by employers to the Employment and Selective Service offices throughout Canada during the four weeks March 3 to March 30, 1944, was 8,036 as compared with 7,645 during the preceding four weeks and with 9,155 during the five-week period February 26 to April 1, last year. The average number of applications for employment received daily by the offices during the period under review was 7,186 in comparison with 7,369 during the previous period and with 8,402 during the five weeks February 26 to April 1, 1943. The average number of placements made daily by the offices during the four weeks ending March 30, 1944, was 4,980, of which 4,830 were in regular employment and 150 in work of one week's duration or less, as compared with a total daily average of 4,982 during the preceding four weeks. Placements during the five weeks ending April 1, 1943, averaged 5,904 daily, consisting of 5,716 in regular and 187 in casual employment.

During the period March 3 to March 30, 1944, the offices referred 167,258 persons to vacancies and effected a total of 119,518 placements. Of these, the placements in regular employment were 115,928, of which 73,422 were of males and 42,506 of females, while placements in casual work totalled 3,590. The number of vacancies reported by employers was 123,213 for males and 69,662 for females, a total of 192,875, while applications for work numbered 172,461, of which 109,375 were from males and 63,086 from females. Reports for the four weeks February 4 to March 2, 1944, showed 183,484 positions available, 176,857 applications made and 119,563 placements effected, while from February 26 to April 1, 1943, there were recorded 274,651 vacancies, 252,039 applications for work and 177,114 placements in regular and casual employment.

The following table gives the placements effected by the offices, each year from January, 1934, to date:—

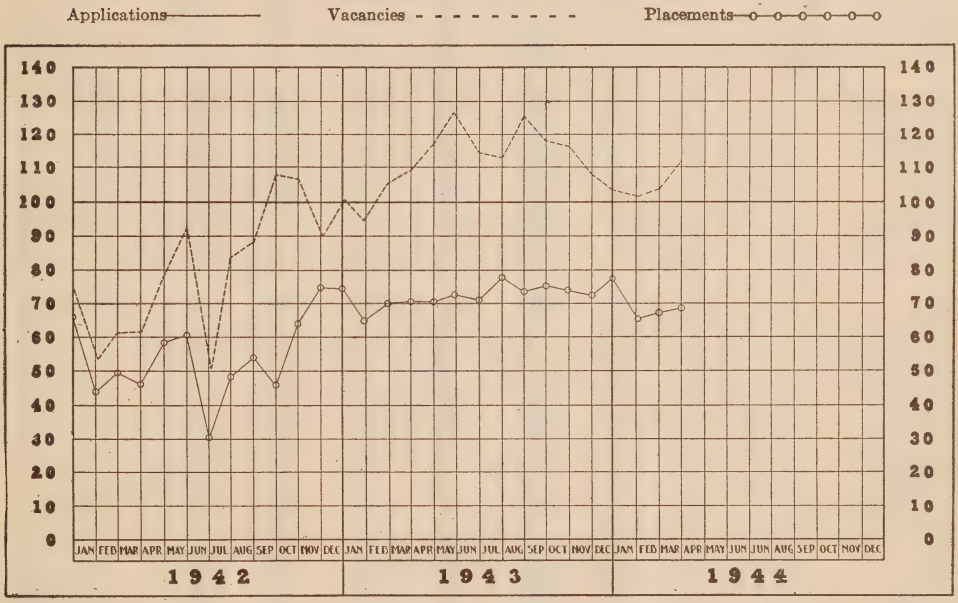
Year	Placements		
	Regular	Casual	Totals
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942	809,983	85,638	895,621
1943	1,890,408	53,618	1,944,026
1944 (13 weeks)	386,501	12,861	399,362

Prince Edward Island and Nova Scotia

Employment opportunities, as indicated by orders received at Employment and Selective Service offices in Nova Scotia and Prince Edward Island during the four weeks ending March 30, 1944, showed a daily average of 282, in comparison with 280 in the preceding period and 359 during the five weeks ending April 1, 1943. The average number of placements effected daily was 204 during the period under review, compared with 188 in the previous four weeks and 245 during the five weeks ending April 1, last year. A fairly large decrease in construction and a moderate loss in services accounted for the reduction in placements when compared with the period ending April 1, 1943. Improvement of moderate proportions was noted in public utilities operation, trade and manufacturing, while changes in all other groups were unimportant. Placements by industrial divisions included manufacturing 1,946; services 945; public utilities operation 710; trade 709; construction 362, and mining 127. There were 3,231 men and 1,579 women placed in regular employment.

New Brunswick

Orders listed at Employment Offices in New Brunswick during the period ending March 30 called for a daily average of 229 workers, compared with 204 in the previous four weeks and 265 during the period ending April 1, last year. There was a daily average of 152 placements compared with 140 during the four weeks ending March 2, and 171 in the five weeks ending April 1, 1943. The decline in placements from the period ending April 1, last year, was greatest in construction with a smaller decrease shown in services. The only increases of importance were moderate gains in logging, public utilities operation and trade. Industrial groups in which most of the placements were effected were: manufacturing 1,026; logging 643; services 611; trade 532; public utilities operation 506, and construction 217. Placements in regular employment numbered 2,520 of men and 1,100 of women.



Quebec

There was a decrease in the average number of positions available daily at Employment Offices in the province of Quebec during the four weeks under review, there being 2,322 compared with 2,473 in the preceding period and 2,956 during the five weeks ending April 1, 1943. Placements showed a daily average of 1,487, in comparison with 1,553 in the previous four weeks and 1,484 during the period ending April 1, last year. The most important change in placements from the period ending April 1, 1943, by industrial groups, was a substantial gain in logging, while improvement of more moderate proportions was recorded in trade, services, agriculture, finance and insurance, and public utilities operation. The increases were almost entirely offset by large losses in manufacturing and construction. Placements by industrial divisions included: manufacturing 16,710; logging 5,588; services 5,008; trade 2,917; construction 2,330, and public utilities operation 1,957. Regular placements numbered 24,742 of men and 10,828 of women.

Ontario

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Ontario during the four weeks ending March 30, was 3,366, as compared with 3,061 during the previous period and 3,411 in the five weeks ending April 1, last year. Under both comparisons placements showed a decrease, the daily average being 1,912, as compared with 1,925 in the preceding four weeks and 2,439 during the period ending April 1, 1943. The large reduction in the daily average of placements from the five weeks ending April 1, last year, was mainly due to a marked decrease in manufacturing, although large losses occurred in construction and services. Moderate declines in trade and agriculture were partly offset by gains in public utilities operation and mining. Industrial divisions in which the majority of placements were effected included: manufacturing 22,158; services 8,574; trade 5,411; public utilities operation 4,203; construction 1,804; logging 1,680 and mining 899. There were 26,317 men and 18,505 women placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Manitoba

Positions offered through Employment Offices in Manitoba during the period ending March 30, averaged 397 daily, in contrast with 311 in the previous four weeks and 384 during the period ending April 1, last year. There was a daily average of 255 placements compared with 225 in the preceding period and 307 in the five weeks ending April 1, 1943. Placements were less numerous than those of the period ending April 1, last year, the

greatest decreases being shown in manufacturing, construction, services and logging. The only advancement of importance was in trade. Industries in which employment was found for more than 100 workers included: manufacturing 1,776; trade 1,684; services 1,563; public utilities operation 561; construction 176 and agriculture 128. Regular placements numbered 2,422 of men and 2,717 of women.

Saskatchewan

Orders received at Employment Offices in Saskatchewan during the four weeks ending March 30, called for an average of 197 workers daily, compared with 180 during the period ending March 2, and with 196 in the five weeks ending April 1, last year. Placements showed a daily average of 127, in comparison with 122 in the preceding period and 150 during the five weeks ending April 1, 1943. The moderate decreases in services and construction were the only changes of importance in placements from the period ending April 1, last year. Placements by industrial groups numbered: services 1,075; trade 846; manufacturing 552; public utilities operation 282 and agriculture 108. There were 1,382 men and 1,374 women placed in regular employment.

Alberta

Employment opportunities, as indicated by orders received at Offices in Alberta during the period ending March 30, showed a daily average of 408, compared with 331 in the previous four weeks and 431 during the five weeks ending April 1, 1943. During the period under review, the average number of placements effected daily was 242, in contrast with 226 in the preceding four weeks and 321 during the period ending April 1, last year. With the exception of a small gain in logging and a nominal increase in fishing and hunting, all industrial groups recorded declines in the daily average of placements from the five weeks ending April 1, 1943. The largest reductions were reported in services, construction, trade, public utilities operation and manufacturing. Placements by industries included. services 1,745; manufacturing 1,053; trade 998; construction 810 and public utilities operation 556. Placements in regular employment numbered 3,181 of men and 2,148 of women.

British Columbia

During the four weeks ending March 30, 1944, the daily average of positions offered through Employment Offices in British Columbia was 836, compared with 806 in the preceding period and 1,153 during the five weeks ending April 1, 1943. The average number of placements registered daily was 600, during the period under review, compared with 602 in the previous four weeks and 788 during the period ending April 1, last year. Placements in manufacturing and construction, on a daily average, were considerably fewer than during the five weeks ending April 1, 1943, and accounted for the decrease for the province as a whole under this comparison. The changes in all other groups were of minor importance. Industrial divisions in which most of the placements were effected were: manufacturing 3,955; services 3,358; logging 2,142; trade 1,671; construction 1,476 and public utilities operation 1,150. Regular placements numbered 9,627 of men and 4,255 of women.

Quarterly Report of Employment and Selective Service Offices, December 31, 1943, to March 30, 1944

BUSINESS transacted by the Employment and Selective Service Offices of Canada during the first quarter in 1944, showed a slight decrease when compared with the first quarter of last year. Gains in vacancies were noted in forestry and logging, trade, mining, public utilities and agriculture, the highest being in forestry and logging but were offset by heavy losses in construction and manufacturing and smaller declines in services, finance and insurance, and fishing, hunting and trapping. Marked reductions in placements were registered in manufacturing and construction, although services, public utilities, and fishing, hunting and trapping also showed declines and advances were shown in forestry and logging, trade, mining and agriculture, the largest being in forestry and logging. All provinces except Ontario, Prince Edward Island and Saskatchewan reported fewer vacancies notified and only the Province of Quebec made more placements.

The accompanying table gives the vacancies and placements of the Employment and Selective Service Offices by industrial groups in the various provinces during the period December 31, 1943, to March 30, 1944.

From the chart appearing elsewhere in this issue, which accompanies the article on the work of the Employment and Selective Service Offices for the four-week period March 3 to March 30, it will be noted that the curves of

vacancies and placements in relation to applications showed upward trends during the quarter under review.

During the period December 31, 1943, to March 30, 1944, there were ratios of 105·2 vacancies and 68·4 placements for each 100 applications for employment, as compared with 102·9 vacancies and 68·4 placements during the first quarter of 1943.

The average number of positions offered daily during the first quarter in 1944, was 8,125, of applications registered 7,724, and of placements effected 5,186, in contrast with a daily average of 8,837 vacancies, 8,581 applications and 5,875 placements in regular and casual employment during the first quarter of 1943.

During the thirteen weeks December 31, 1943, to March 30, 1944, the offices reported that they had referred 568,548 persons to positions and effected a total of 399,362 placements, of which 386,501 were in regular employ-

ment and 12,861 in casual work. Of the placements in regular employment 250,508 were of males and 135,993 of females, while casual work was found for 3,869 males and 8,992 females. During the first quarter of 1943, there were 452,307 placements, of which 434,926 were in regular employment and 17,381 in casual work. Applications for employment during the period under review were received from 378,382 males and 216,423 females, a total of 594,805, in contrast with a registration of 660,718 during the first quarter of 1943. Employers notified the offices of 625,670 vacancies, of which 400,486 were for males and 225,184 for females, as compared with 680,378 opportunities for work during the first thirteen weeks of 1943.

Elsewhere in this issue will be found a report in detail of transactions of the Employment and Selective Service Offices for the four-week period March 3 to March 30, 1944.

Unemployment in Trade Unions at the Close of the Quarter Ending March 31, 1944

UNEMPLOYMENT in the following report has reference to involuntary idleness due to economic causes. Persons who are without work on account of sickness, a strike or a lockout, or who are engaged at work outside their own trades are not considered as unemployed. As returns from unions making reports vary from quarter to quarter, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference, only, to the organizations reporting.

At the end of March returns were tabulated from 2,318 labour organizations having a total membership of 457,144 persons, of whom 3,954, or a percentage of ·9 were listed as unemployed, in comparison with percentages of ·8 in December, 1943 and 1·3 in March, a year ago. Union members who are reported as without work in these times are to a large extent temporarily laid off. The very minor employment contraction from December was due almost wholly to the usual seasonal dullness which prevailed for those in the building and construction trades; employment among these workers reflected an appreciable reduction, while contractions of lesser degree were manifested also, among those in the mining, fishing and lumbering occupations. These recessions in available work were in a large measure offset by the slightly higher employment levels indicated for union members in the manufacturing and transportation industries.

The percentage of unemployment in each province is shown in table 1. As indicated therein, this ranged from ·4 in Nova Scotia to 1·4 in Alberta. In comparison with December appreciable betterment was in evidence in Nova Scotia, while in Saskatchewan there was a very minor increase in work. On the other hand, slight employment recessions were apparent in Quebec, Ontario, Manitoba and British Columbia; in New Brunswick and Alberta there were more moderate contractions. In comparison with the situation in March a year ago, employment for those in Quebec unions was moderately higher, while minor improvements only, were apparent in Nova Scotia, Ontario, Manitoba and Saskatchewan. In contrast with these changes, slight recessions were in evidence for union members in New Brunswick, Alberta and British Columbia.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province, with the

exception of Prince Edward Island. At the close of March, these percentages ranged from ·3 in Saint John to 2·6 in Edmonton. In comparison with the December returns, conditions in Halifax and Vancouver were slightly better, while the situation in Montreal remained unchanged. Minor recessions in work were observed in Saint John, Toronto, Winnipeg and Regina, while in Edmonton there was a noteworthy decline. In comparison with the situation in March, 1943, union members in Montreal were much better employed, while advances in lesser degree were apparent in Toronto and Saint John. In Regina and Vancouver there were minor betterments, only. The situation in Winnipeg remained unchanged, while in Halifax there was a slight employment contraction; in Edmonton there was a noteworthy decline in activity.

The accompanying chart illustrates the trend of unemployment from January, 1939, to date. The level of the curve in March was slightly higher than in December, 1943, thus reflecting a very minor recession in available work. In comparison with that of March, a year ago, the point of the curve rested at a slightly lower level, which was indicative of somewhat improved conditions.

For the manufacturing industries returns were tabulated from 858 labour organizations, having a total membership of 262,482 persons, of whom, 703, or a percentage of ·3 were listed as without work, in comparison with a percentage of ·6 in December, 1943. The March figure was identical with that recorded in the corresponding month, a year ago. As compared with the December situation, the employment level for those in the iron and steel industry was appreciably higher. Among papermakers, union members in the printing trades, in the vegetable products group, cigar and tobacco workers and bakers and confectioners and in the animal products group, in which is included butchers, meat and fish packers, leather and fur workers, employment levels were slightly higher. Among unclassified manufacturing workers there was an appreciable employment increase, but as the membership in that group is comparatively small not very many were affected. Among electric current employees, etc., a very minor advance only, was necessary to reach full employment. For textile and carpet, hat, cap and glove, rubber, clay, glass and stone and chemical products workers, no unemployment was in evidence at either date, while the situation among garment workers, in which group is included men's and women's clothing workers, remained unchanged. For members in the mineral products division there was a minor decrease in activity. Among those in the non-ferrous metals section, in which is included reports from metal polishers, etc., aluminum, jewellery, and mine, mill and smelter workers, as well as among woodworkers, employment levels were slightly lower. In comparison with that of March, a year ago, a considerably higher employment level prevailed for union members in the animinal products groups, while for those in the printing trades an employment increase was apparent, although it was not quite as pronounced. A minor improvement was reflected in reports tabulated for union members in the vegetable products section and also, for those in the garment trades. On the other hand, reduced activity on a rather small scale was in evidence among wood and non-ferrous metal workers, while the employment level for those in the large iron and steel group was slightly lower, also.

Reports were listed from 56 unions of coal miners, having a total membership of 21,780 persons. Of these, 72, or a percentage of ·3, were unemployed, in comparison with percentages of ·1 in both the months of December and March, 1943. In comparison with the situation in December a slight employment

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

		84·2	.8	.7	.3																															

recession was in evidence in Alberta, while in Nova Scotia and New Brunswick no unemployment was apparent at either date; in British Columbia, there was a very minor employment contraction. As compared with conditions in March, a year ago, Alberta and British Columbia unions reported slight recessions. As in the previous comparison, no unemployment was indicated in New Brunswick at either date, while a very minor improvement was in evidence in Nova Scotia.

In the metallic ores and non-metallic minerals divisions of the mining group, returns were tabulated covering 388 and 3,806 union members, respectively. Among the former, there was a slight increase in available work as compared with December, while in the non-metallic minerals section, there was a minor decline in activity. In comparison with conditions in March, 1943, a moderate employment recession was apparent among those in non-metallic minerals group.

Returns were tabulated from 205 unions in the building and construction trades. These had a total membership of 34,858 persons, of whom 2,259, or a percentage of 6·5 were listed as without work, in comparison with percentages of 3·1 in December and 9·0 in March, a year ago. Among painters, decorators and paperhangers conditions improved slightly over December, while for wood, wire and metal lathers, no unemployment was in evidence at either date. On the other hand, bridge and structural iron and electrical workers manifested minor employment recessions, while for granite and stonecutters and hod carriers and unclassified building workers, the contractions in work afforded were more moderate. Plumbers and steamfitters indicated an appreciable reduction in activity, while employment levels for bricklayers, masons and plasterers and carpenters and joiners were substantially lower. The percentage of unemployment among steam shovel men was up considerably, but as the membership in this group is very small, not many were involved in the change. As compared with the situation in March, 1943, carpenters and joiners were much better employed, while for the smaller group of bricklayers, masons and plasterers the increase in available work was quite noteworthy also. Among painters, decorators and paperhangers and hod carriers and unclassified building workers conditions improved slightly. On the other hand, plumbers and steamfitters indicated a moderate employment reduction, while, as in the previous comparison, a substantially higher percentage of the small group of steam shovel men was reported as unemployed.

Returns were tabulated in the transportation industries from 864 unions with a total membership of 87,020 persons, of whom 314, or a percentage of ·4 were unemployed, in comparison with percentages of ·7 in December and 1·1 in March, a year ago. In the steam railway division is included nearly 80 per cent of the entire group membership. As compared with December, the employment level for these workers was slightly higher, while among navigation workers, whose membership is comparatively small, there was a moderate increase in activity. The very slight percentage of unemployment observed among street and electric railway employees remained unchanged while teamsters and chauffeurs did not report any unemployment at either date. In comparison with the situation in March, 1943, navigation workers were much better employed while the level of work afforded to union members in the steam railway division was moderately higher. The unemployment percentage for those in the street and electric railway division, as in the previous comparison, remained unchanged, while for teamsters and chauffeurs a slight advance only was necessary to attain full employment.

As in March and December, 1943, union members in the retail and wholesale trades were reported as fully engaged. In the service group, in which is included returns from civic as well as hotel and restaurant and theatre and stage employees, barbers, stationary engineers and firemen and unclassified workers, the situation remained identical with that of December, but the employment level was moderately higher than in March, a year ago. For the service group reports were tabulated covering over 25,000 members.

Reports were included covering 269 and 7,815 members respectively, in the fishing and lumbering groups. As compared with conditions in both December, 1943, and March, a year ago, lumber workers and loggers unions indicated a slight recession in activity, while the unemployment percentage among fishermen was up substantially.

Table 1 shows by provinces the average percentage of union members who were unemployed each year from 1933 to 1943, inclusive, and also the percentage of unemployment for March of each year from 1932 to 1942, for each month of 1943 and for the quarter ending with March, 1944. Table 11 summarizes the returns in the various groups of industries for the months included in Table 1.

Labour Law

Recent Regulations Under Dominion and Provincial Legislation

RATES of pay for seamen in manning pools have been changed and both a War Service bonus and a special payment for illness instituted. The rules governing masters' examinations have been relaxed. Greater latitude is allowed to children of mothers working in other than war industries to attend day nurseries in Ontario. The Vocational Training program may be extended to cover industries producing essential civilian goods. Free space is to be provided for the concession stands of blind veterans in Dominion buildings.

A new Quebec Minimum Wage Order for glass factories has been made, the Order for stationary enginemen has been amended, and several other Orders renewed. In Saskatchewan, certain regulations regarding electrical workers have been revised, regulations regarding hours of labour in gaols have been issued, and action by a pension authority to recover from the property of an old age pensioner restricted.

Dominion

Seamen

Rates of Pay.—By an Order in Council gazetted April 17, the regulations governing the rates of pay and allowances to seamen in Canadian Manning Pools have been changed. For each class of worker the rate is now to be the basic rate of pay of Park Steamship Company vessels of 4,700 dead weight tons as approved by the National War Labour Board with the addition of the agreed cost-of-living bonus, instead of calculated on the minimum rates of pay laid down by the British National Maritime Board scales, as formerly.

Masters' Exams.—An Order in Council gazetted April 17 relaxes the regulations regarding examinations under the Canada Shipping Act. Due to a shortage of certificated seamen, applicants may now try the examinations for Masters' or Mates' Certificates of Competency in the Home Trade, Inland or Minor Waters without the twelve months of qualifying service within the five years preceding the examination which was previously required, provided that they pass the letter and lantern sight tests.

War Service Bonus.—By Order in Council (P.C. 149/2705) of April 18, provision has been made for the payment of a war service bonus to seamen of 10 per cent of their annual earnings including both the basic pay and the war risk bonus. A seaman eligible for the bonus must have signed an agreement to join a manning pool and to serve at sea on foreign-going ships of Canadian registry for two years or for the duration of the war, whichever is shorter. The bonus is payable through the office of the Director of Merchant Seamen at the end of 12 months' continuous service at sea, including time spent in manning pools. The owner may pay it to any seaman who is permanently employed by him, and be reimbursed by the Minister. Calculation of the service is to begin from the date of signing an agreement except in the case of those who are already serving under Articles of Agreement on a foreign-going ship of Canadian registry and who sign another agreement under this order following completion of the Articles of Agreement. In these cases the bonus is to be calculated from April 1, 1944.

Those trainees entering the Marine Engineering School at Prescott or St. Margaret's Sea Training School or any similar school subsequently established who sign an agreement according to this order to take effect at the end of training period, are eligible for the bonus from the date of entering the school.

Seamen who are discharged for misconduct or incompetence, apart from medical or other reasons accepted by the Director of Merchant Seamen, and those who do not report for reentry to a manning pool immediately after having completed Articles of Agreement, are not to be paid the bonus.

The Minister may extend the Order by means of regulations to cover seamen serving on ships engaged in home-trade voyages or partly in home trade and partly in foreign trade, and he may authorize the payment of the bonus to any seaman who does not come within the Order when special circumstances warrant such extension.

Special Payment Order.—Order in Council (P.C. 152/2705) gazetted April 24 provides for a special payment not exceeding 12 weeks' basic pay for sickness and injury.

Those eligible for the payment are seamen engaged on foreign-going ships of Canadian registry or Canadian Seamen on foreign-going ships of Allied registry, if they have signed a Canadian Manning Pool Agreement to serve at sea for two years or the duration of the war, whichever is the shorter period, or if they have joined a foreign-going ship of Allied registry at a Canadian port under authorization of the Director of Merchant Seamen, or are permanently employed and continuously serving at sea on a foreign-going ship of Canadian registry.

They become eligible for the payment if they are discharged from their ship and placed in hospital at any port outside of Canada, if they have been left abroad because of sickness or injury and been repatriated to Canada as Canadian seamen for treatment, if they are landed at a Canadian port and receive treatment under the provisions of the Canada Shipping Act relating to sick mariners, or if, being on the strength of a manning pool, they are admitted to hospital as Canadian seamen.

No payment will be made where the seaman is entitled to receive a pension or compensation, or to receive his regular wages during the period of treatment, or, except in cases of venereal disease, where the illness is due to the seaman's own wilful act or behaviour.

The owner of the ship is to make the payment and is then entitled to be reimbursed to the extent of 50 per cent of the amount by the Minister. If the owner fails to do this, the Minister will pay the seaman on his return to a Canadian port and make the amount thus paid a debt due to the Crown recoverable from the owner or the Master of the ship. In the case of seamen discharged outside Canada, the Master must notify an appropriate officer so that the eligibility of the seaman may be determined. All seamen entitled to receive the payment must report for duty immediately upon being certified fit for service. In cases where an allotment from his wages is being made by the seaman, the allotment payments shall be continued out of the special payment.

The Minister is given the same power to extend the application of this Order and make regulations to carry out its provisions as he is given by the War Service Bonus Order above.

Other Orders

By an Order gazetted April 17 children whose mothers are working in other than war industries may be admitted to day nurseries in Ontario set up by agreement between the Dominion and the Provincial Governments over and above the previous restriction of 25 per cent of a project's capacity. Children of mothers in war industries will have priority in admission. If the number of children of mothers not in war industries exceeds 25 per cent of the capacity of any project, the Dominion Minister of Labour must give his consent before the Dominion will contribute to the maintenance of the excess number.

The facilities of the Canadian Vocational Training Program have been extended to include industries producing essential civilian goods where designated by the Director of Training. The Order providing for this was gazetted on May 1.

By an Order gazetted May 1, the Minister of Public Works is authorized to enter into agreements with the Canadian National Institute for the Blind granting free space in Canadian Government Buildings for blinded and disabled veterans to operate concession stands. The agreements may make provisions concerning the commodities to be sold, prices, hours of sale, equipment used and other matters.

The following recent Orders in Council are summarized elsewhere in the LABOUR GAZETTE: P.C. 3277 of May 4 amending the Wartime Wages Control Order regarding railway employees; P.C. 2626 and P.C. 2675 of April 13 amending the National Selective Service Civilian Regulations; P.C. 2627 of April 13 making appointments to Regional Selective Service Advisory Boards; P.C. 3062 of April 27 regarding the administration in B.C. and P.C. 2911 governing the administration in Ontario of the Wartime Labour Relations Regulations.

Provincial

Quebec Minimum Wage Act

Glass Factories.—A new Order 45 gazetted April 22 and effective until January 1, 1946, covers undertakings for the setting, working or fashioning of window or plate-glass, glass bricks or sheets, or other vitreous material; mirror manufacture; and framing establishments where any of these materials are cut, processed or fashioned, except where these operations are only incidental to the main undertaking. Different rates are fixed for two zones; Montreal and within a five-mile radius, and certain specified cities and towns.

Employees are divided into 11 categories covering the various glass trades and labourers,

apprentices, watchmen, stationary enginemen, firemen, office and executive employees. Maximum and minimum wages are laid down for each category. For plate cutters and setters the minimum hourly rates are 47 and 50 cents in the two zones respectively, and the maximum in both is 85 cents. For other glass workers, divided into three categories, the minima are 42 and 45 cents, 38 and 40 cents and 36 and 38 cents. The maximum rates are 75, 60 and 55 cents. Minimum rates for labourers are 28 and 30 cents with a maximum of 50 cents; for apprentices 19 and 20 cents with no fixed maximum.

The regular hours of work to which the rates apply are nine from Monday to Friday and four on Saturday for all except watchmen, stationary enginemen and firemen for whom the work-week is 60 hours, and office employees for whom it is 49 hours. Work in excess of these hours, or before 7 a.m. or after 7 p.m., or on Saturday afternoons or on Sundays and holidays is to be paid at the rate of one and one-half times the minimum wage, except in the case of watchmen and office employees for whom "overtime" means any time over the specified work-week. No regular hours are specified for executives. Employees are entitled to the minimum weekly wage if they work every working day, regardless of whether the hours of the establishment are less than the work-week fixed in the Order. Stationary enginemen and firemen are subject to the wage rates of this Order only if they work outside the Montreal district which is governed by Order 6 relating specifically to stationary enginemen and firemen (L.G. 1943 p. 1034). Overtime in both cases is regulated by Order 6. The Order lays down the maximum proportion of workers who may be classified as apprentices in each of the trade classifications. Provisions of General Order 4 which are not inconsistent with this Order apply to glass factories.

Order 6 amended (L.G. 1943, p. 1034). By an Order gazetted April 22, the wage rates of first-class chief stationary enginemen in the district of Montreal have been changed from $220 per month to $51 per week.

Renewals Order 16 governing butter and cheese wholesalers and exporters, and Order 42 relating to peat-bog exploitations have been renewed until May 1, 1945 by Orders gazetted April 15. By Orders gazetted April 22, Order 13 governing the match industry, Order 19 pertaining to full-fashioned hosiery mills, and Order 17 governing laundries and dry-cleaning establishments in Montreal have been renewed until June 1, 1945.

Saskatchewan Gaols Act

On October 7, 1943, regulations governing gaols were gazetted cancelling all previous regulations. It is specified that the daily hours of compulsory labour for prisoners sentenced to hard labour are not to be more than 10 nor less than 7, and no prisoner is to be required to perform any unnecessary labour on the Sabbath, Christmas Day and Good Friday other than keeping the gaol clean. The nature of the compulsory labour, other than ordinary gaol work, will be determined by the Warden or Matron.

Extra-mural labour, performed by ordinary prisoners who are physically capable, consists of farm labour, breaking stones, cutting wood, digging drains and sewers, repairing and keeping public highways, cultivating and improving public grounds or any other work approved by the Warden and the Minister. From November to March inclusive, the length of the working day is 8 hours during daylight with one hour off for dinner, and from April to October, 10 hours with one hour off for dinner.

Saskatchewan Old Age and Blind Persons' Pensions Act

A change in the regulations under this Act gazetted May 1 provides that no claim may be made by the pension authority for the recovery of any part of the pension paid, where the net value of the estate of a deceased pensioner does not exceed $2,000. Also where the applicant for an old age pension shows that the equity of his property is less than $2,000, no caveat will be filed against such property.

Saskatchewan Power Commission Act

Regulations under this Act for safeguarding life and property from hazards arising out of certain electrical works and undertakings, and regulations for securing the safety of workers engaged in operating or maintaining electrical generating stations, substations, and transmission and distribution systems were issued in revised form with only slight changes in the GAZETTE of March 23.

Recent Legal Decisions Affecting Labour

Alberta Court has no Jurisdiction in Case of Dismissal in British Columbia

ON February 5 the Alberta District Court quashed a conviction involving the dismissal of an employee north of Dawson Creek in British Columbia. An Edmonton magistrate held that the man in question had been dismissed contrary to the Masters and Servants Act, which requires the payment of wages if the court finds evidence of improper dismissal. The case was appealed by the company on the ground that the magistrate did not have jurisdiction over the complaint.

Mr. Justice Matheson held that it was immaterial where the employment contract had been signed and unnecessary to decide whether National Selective Service Regulations regarding proper notice of dismissal supersede the Masters and Servants Act. He concluded that the place of the complainant's dismissal determined the jurisdiction, and allowed the appeal. Reference was made to an Ontario case: "That the judicial jurisdiction of a magistrate is limited to matters arising within the limits of the municipality over which his commission extends and goes no farther is well-settled." *Rex ex rel Bowyer* v. *R. Melville Smith Co. Ltd.* (1944) 1 Western Weekly Reports 606.

Ontario Supreme Court Denies Motion for Injunction Restraining Labour Court Registrar from Taking Vote

After a vote had been ordered among its employees by the Ontario Labour Court, the Canadian Westinghouse Company applied to the Supreme Court for an interim injunction restraining the Labour Court Registrar from taking the vote until the final disposition of an action by the Company to have the Collective Bargaining Act declared *ultra vires*. The application was dismissed with costs by Mr. Justice Mackay on April 5. His reasons were the same as those he gave in the Ontario Labour Court in the *Steel Company of Canada* case (see p. 682), where the matters raised were identical.

The circumstances under which the application arose are as follows. The United Electrical Radio and Machine Workers of America applied to the Labour Court to be certified as the collective bargaining agency for the employees of the company and the Employees' Independent Union of the Canadian Westinghouse Company intervened. The company immediately started proceedings in the Supreme Court to have the Collective Bargaining Act declared *ultra vires*.

Before the pleadings in this action were complete the application to the Labour Court came on for trial and on March 10 Mr. Justice Hope ordered a vote to be taken. Before the vote could be taken, however, the Wartime Labour Relations Regulations were issued by the Dominion Government. The company thereupon discontinued its original proceedings in the Supreme Court and started a new action asking first, for a declaration that the Collective Bargaining was *ultra vires* of the Ontario legislature, or, alternatively, that it did not apply to Canadian Westinghouse since this company was under the Wartime Labour Relations Regulations, second, for an order setting aside the direction of Mr. Justice Hope, third, for a further order staying the proceedings in the Labour Court and finally for an order to restrain the taking of a vote by the Registrar of the Labour Court. *Canadian Westinghouse Company Ltd.* v. *Attorney-General for Ontario et al.*, Supreme Court of Ontario, April 5, 1944.

Quebec Court Rules Unemployment Insurance Deductions May Not Be Made After Workers Has Left Employer's Service

When an employer has failed to make deductions from an employee's wages under the Unemployment Insurance Act, he may not recover these deductions when the employee is no longer working for him, the Quebec Court of the King's Bench decided on February 11.

Through an audit it was discovered that $36.96 should have been paid into the Unemployment Insurance Fund, $16.08 on behalf of the employer, and $20.86 as the employee's contribution. The employer brought action to recover this amount after the workman had left his employ.

The employer's counsel pointed out that sec. 19, paras. 2, 3 and 4 and secs. 20 and 21 of the Act provide for cases of recovery other than by the usual wage-deduction method, as, for example, when the employee receives his remuneration from someone other than his employer. The plaintiff also contended that sec. 68 stipulating that an employer convicted of failing or neglecting to pay a contribution under the Act may not recover the employee's contribution from the employee, implies that the employer retains the right of recovery after the employee has left his service. Otherwise the section would be meaningless.

The defence argued that sec. 19, para. 1 clearly limited the methods of recovering the employee's contribution to the period of his employment. The section provides that contributions may be recovered.

> "by means of deductions from the wages of that person or from any other pecuniary remuneration due from or payable by the employer to the person and not otherwise."

The Court held that sec. 68 merely affirmed the responsibility of the employer to pay into the fund by depriving him, when penalized for an offence, of his right to recover from the employed person's wages, when that person is still in his employ.

Sec. 18 of the Act provides that

> "the employer shall in the first instance be liable to pay both the contribution payable by himself, and also, on behalf of, and to the exclusion of, the employed person, the contribution payable by that person."

The Court held that this section, taken in conjunction with the others, shows the intention of the Act to be to exclude the unemployed

person from any responsibility for payment to the fund beyond the time fixed by law for the recovery of it from his wages.

> "To admit the argument that the statute does not limit the time for recovery by the employer from the employed person when that person has left his employment, would in effect so extend the Act as to include liabilities other than those designated or fairly within its terms."

Thus the Court dismissed the action, *Finestone* v. *Vegiard* 1944, Rapports Judiciaires de Quebec, Cour Supérieure, 92.

Woman Teacher's Marriage Does Not Entitle Quebec School Authorities to Cancel Contract

The Quebec Court of the King's Bench held on January 11 that the fact that a teacher marries does not necessarily affect her ability as a teacher and that fear of a possible breach of contract is not sufficient ground for annulling her contract with the school authorities. Also the remuneration received by a married woman forms part of her reserved property and includes not only wages but such indirect returns as damages resulting from a broken contract. Thus, a married woman can claim compensation without her husband's authorization. Accordingly the appeal was upheld and the Superior Court judgment refusing damages quashed. Damages amounting to a year's salary were awarded.

At the end of June, 1942, the appellant was engaged to teach for the school year 1942-43 at $400 a year. She was married on August 17 and ten days later the school authorities terminated the contract because her marriage "might bring all sorts of complications". On the day of the opening of classes, the appellant, stating she was ready to fulfill her contract, protested their action. She then brought an action for damages in her own name for illegal dismissal. The Superior Court held that if the action had been to recover salary, she could have sued in her own name, but that since damages for breach of contract were part of the property owned jointly by a couple, only the husband as head of the household could institute such action. The teacher appealed the case.

Mr. Justice Prévost cited Art. 1425a of the Civil Code of Quebec which reserves to the wife the administration of "the proceeds of her personal work," and Art. 1425g which permits her without her husband's authorization, to make claim in the courts regarding her reserved property. He stated that French jurisprudence, in defining what is meant by "the products of work," has interpreted it to include indemnities for breach of contract. Thus the contention of the defendants that the damages were not the appellant's reserved property was not well founded.

The Court held that the defendants had no right to terminate the contract simply because the teacher had married. In the words of Mr. Justice Prévost.

> "They became agitated too soon; they should have waited until these difficulties and formidable vexations occurred, so that if they had occurred, they could have taken appropriate action at the opportune time."

The Court concluded that the appellant had been illegally dismissed, and her appeal was allowed with costs. *Cote* v. *Commissaires d'Ecoles de la Municipalité de St. Fulgence,* 1944. Rapports Judiciares de Quebec, Cour du Banc du Roi, 165.

Joint Committee in Quebec Awarded Damages on Claim for Wages

An action before the Superior Court of Quebec on August 6 was brought under the Collective Agreement Act by the Joint Committee of Construction Materials against a company to recover the wages of two of its employees. Two receipts dated January 17, 1942, were produced by the defendant to prove that the wages had been paid. However, the evidence advanced by the plaintiff clearly proved that the date was wrong and that the sums had actually been paid on February 6 and February 9, or after the action had been started.

The defence objected to the evidence, invoking Art. 1223 of the Civil Code of Quebec:—

> If the party against whom a private writing is set up do not formally deny his writing or signature in the manner provided in the Code of Civil Procedure, it is held to be acknowledged.

and also Art. 208 of the Code of Civil Procedure:—

> The denial of a signature or of a material part of a bill of exchange, promissory note, or any other private writing or document, upon which any action is founded, or of the fulfilment of the formalities required by law to render the document valid, must be accompanied with an affidavit establishing the facts alleged.

The Court decided that the Joint Committee was in reality a third party between the employers and the workmen and these two Articles did not apply to it. In any case the action was not founded on the documents as Art. 208 requires. Thus the plaintiff had only to deny the written receipts without having to support his denial with an affidavit, in order to force the defendant to verify the date on the receipts. Since the plaintiff established that the date was false, the Court awarded liquidated damages of $17.15 with interest and costs to the plaintiff. *Comité Conjoint des Matériaux de Construction* v. L'Ecuyer 1944, Rapports Judiciaires de Quebec, Cour Superieure, 72.

Montreal Express Company to Pay Damages for Injuries to Employee of Another

Damages amounting to $5,264.75 were awarded by the Montreal Superior Court on February 28, to a chipper employed by Dominion Engineering Works for injuries suffered when he was run over by a truck of the J. B. Baillargeon Express Limited. The Court held both the truck driver and his employer responsible for the accident and ordered the company to pay the damages with interest from the date of the judgment and costs. An action in warranty by the J. B. Baillargeon Express against the Dominion Engineering Works was dismissed on the ground that no negligence had been proved against the latter.

The accident occurred October 30, 1942, when the defendant company's truck was backing along a passageway marked by yellow lines leading from the shipping department of Domin-

ion Engineering Works. The chipper was on his knees working beneath a casting placed about five feet from one of the yellow lines. A wheel of the truck passing about two feet beyond the line, ran over the chipper's leg, causing a fracture. He was unable to work for about 14 months and when he returned was placed on lighter work at an hourly rate of 50 cents, five cents below his former rate.

Since the employer was not responsible for the accident but a third party, the worker could, under the Quebec Workmen's Compensation Act, either claim compensation or bring action. If he elected the former, his right of action would be subrogated to the Workmen's Compensation Commission or to his employer if the employer under the Act was individually liable to pay compensation for any accident to his workmen. The worker chose to bring action himself.

In giving judgment, the Court stated that the driver should have kept within the clearly defined lines marking the passageway, and his employer, knowing the circumstances in which he would have to drive at this plant, should have provided him with an assistant to guide him as he could not see anything on the right side of the truck. The damages awarded covered medical and hospital expenses, convalescent care, a year's wages, loss of clothing, pain and suffering and included $2,000 for a 10 per cent partial permanent incapacity. *Stefan Baczenski* v. *J. B. Baillargeon Express Ltd.* and *J. B. Baillargeon Express Ltd. et al* v. *Dominion Engineering Works Ltd.*, Montreal Superior Court, February 28, 1944.

Quebec Court Holds that Union Members may Sue for Wages Determined by Collective Agreement

On November 10, 1943, the Montreal Superior Court dismissed an inscription in law brought by the defendant in the case of *Yvette Latendresse et al* v. *Charles Rothman*. Costs were reserved. The case concerns 76 members of the International Ladies' Garment Workers' Union who are suing their employer for $122,360 in wages which they claim should have ben paid under the terms of collective agreements signed by the Union and the Montreal Dress Manufacturers' Guild, of which their employer is a member. The agreements have been made legally binding on all employers in the industry by an Order in Council under the Quebec Collective Labour Agreements Act now replaced by the Collective Agreement Act of 1940. Action for the wages was first brought by the Union and its locals against the Guild but the Courts held that the Union had no right to sue (L.G., 1939, p. 544; 1940, p. 991; 1941, p. 724).

The defendant employer claimed that because the unions signing the agreements "do not possess a civil personality, and are not legal entities recognized by law" they are "incapable of entering into a legally valid and enforceable agreement" either on their own behalf or on behalf of the individual plaintiffs. The agreement did not, therefore, "create any legally enforceable contractual relationship and/or obligations between plaintiffs and the defendant."

The Court declared, however, that the only incapacity of the unions "consists in their inability to be, collectively, plaintiffs in a law suit; but that they may be sued collectively, and secure advantages to their members by contracting in their interest." It also pointed out that "the present tendency is to enlarge the scope of *stipulations pour autrui* and to apply same to collective agreements." That is, the provision in Article 1029 of the Civil Code that a party may make stipulations for the benefit of a third person is being applied to collective agreements between employers and unions in which the union members are the third parties benefited by certain stipulations.

Observing that the preamble of the Collective Agreement Act states that "social justice requires the regulating of labour whenever the economic situation involves unjust conditions for the employee," the Court was of the opinion that "the Legislature enforces collective agreements whenever they establish a fair wage or satisfy justice." It held, therefore, that the agreement in question "may or may not be binding upon the defendant according to whether or not it stipulates a fair wage or satisfies justice." It added that "it is for the defendant to prove that the wages claimed by plaintiff are not fair and that the agreement does not further the ends of justice." *Yvette Latendresse et al* v. *Charles Rothman*, Montreal Superior Court, November 10, 1943.

U.S. Supreme Court Holds Decline in Membership after Union Recognized as Bargaining Agent not Proper Ground for Employer's Refusal to Bargain

Two Cases Under National Labour Relations Act

Two decisions of the U.S. Supreme Court on April 10 interpreting the National Labour Relations Act concerned unions each of which lost the support of the majority of the employees after it had been recognized as the bargaining representative. In each case the Court held that the fact of losing majority support did not release the employer from his duty to negotiate with the union. In other respects, the cases differed but in both cases the Supreme Court affirmed a judgment of a Circuit Court of Appeals directing enforcement of an order of the National Labour Relations Board requiring an employer to bargain with a certain union as representing his employees.

In the case which came up for argument first the Medo Photo Supply Corporation had recognized a local of the American Federation of Photo Employees Union as the exclusive bargaining agent of its employees in one department of the store and agreed to meet the union representatives on June 9, 1941, to begin negotiations over a union proposal for an increase in wages.

On June 7, 12 of the union members told the company's manager that they and 6 other members had no desire to belong to the union if by their own efforts they could obtain certain wage increases. The company, on June 9, agreed to grant these increases and the committee of the employees informed the manager and, later, the union representative that they no longer desired the union to represent them. The company thereupon refused to negotiate with the union on the ground that it did not represent a majority of the employees.

The National Labour Relations Board found that the employees had not revoked their desig-

nation of the union as bargaining agent before the wage increases were promised by the company, that the increases were induced by negotiations by certain members of the union before they repudiated the union that the company's decision to increase wages was "occasioned solely by the employees' offer to withdraw from the union if the rates were granted", and that the employees' defection from the union was induced by the company's conduct in dealing directly with the employees.

The Supreme Court by a seven-to-two majority, held that the negotiation by the company with any one other than the union, the designated representative of the employees, constitutes the unfair labour practice described in the Act as interference with the right of employees to bargain collectively through representatives of their own choosing. The obligation imposed by the Act is exclusive and implies "the negative duty to treat with no other":—

> Bargaining carried on by the employer directly with the employees, whether a minority or majority, who have not revoked their designation of a bargaining agent, would be subversive of the mode of collective bargaining which the statute has ordained... Orderly collective bargaining requires that the employer be not permitted to go behind the designated representatives, in order to bargain with the employees themselves,

prior to a revocation of the union as bargaining representative.

It was held, as it had been in earlier cases, to be likewise an unfair labour practice for the company, in response to the offer of its employees, to induce them, by the grant of wage increases, to leave the union.

That the employees asked the company to disregard the obligations of the Act and that the union lost the support of a majority of the employees as a result of the employer's unfair labour practices did not relieve the employer from his duty to bargain with the union:—

> The statute was enacted in the public interest for the protection of the employees' right to collective bargaining and it may not be ignored by the employer, even though the employees consent...[The employer] cannot thus by its own action disestablish the Union as the bargaining representative of the employees, previously designated as such of their own free will. *Medo Photo Supply Corp.* v. *National Labour Relations Board,* U. S. S. C. Adv. Ops. Oct. Term, 1943, 749.

In the second case, 45 of the 80 production and maintenance employees in a clothing factory designated the Amalgamated Clothing Workers as their bargaining representative in June, 1941. On the employer's refusal to bargain, the union sought certification as the representative and a consent election was arranged for July 25. Before the election the Company "conducted an aggressive campaign against the union, even to the extent of threatening to close its factory if the union won the election". The union, thereupon, filed charges with the National Labour Relations Board alleging unfair labour practices. Unsuccessful in bringing the parties together, the Board, on March 2, 1942, issued a complaint against the Company. After lengthy hearings the Board found against the company and in October, 1942, entered an order directing the company to negotiate with the union.

During the seven-month interval between the filing of the charges and the issuance of the complaint, 13 of the union's members were replaced in the normal course of business by new employees, thus reducing the union members to a minority. The Board, as in many previous decisions, concluded that

> the only means by which a refusal to bargain can be remedied is an affirmative order requiring the employer to bargain with the union which represented a majority at the time the unfair labour practice was committed.

The Supreme Court, unanimously, Chief Justice Stone not participating, affirmed the lower Court's decision directing enforcement of the Board's Order. Said the Court:—

> Out of its wide experience, the Board many times has expressed the view that the unlawful refusal of an employer to bargain collectively with its employees' chosen representatives disrupts the employees' morale, deters their organizational activities, and discourages their membership in unions. The Board's study of this problem has led it to conclude that, for these reasons, a requirement that union membership be kept intact during delays incident to hearings would result in permitting employers to profit from their own wrongful refusal to bargain...One of the chief responsibilities of the Board is to direct such action as will dissipate the unwholesome effects of violations of the Act ...The Board might well think that were it not to adopt this type of remedy, but instead order elections upon every claim that a shift in union membership had occurred during proceedings occasioned by an employer's wrongful refusal to bargain, recalcitrant employers might be able by continued opposition to union membership indefinitely to postpone performance of their statutory obligation.

As to the argument that the Board's order was unjust to those employees who wished to substitute another bargaining agent, the Court held that a bargaining relationship rightfully established must be permitted to function for a reasonable period in which it can be given a fair chance to succeed. After such a period, however, the Board may, in a proper proceeding take steps to recognize a changed situation. *Franks Bros. Co.* v. *National Labour Relations Board.* U. S. S. Court Adv. Ops. October Term, 1943, 773.

Decisions of the Labour Court of Ontario

Agreement Held to Bar Certification of New Collective Bargaining Agency

An agreement between Moffats' Limited and the Employees' Council of Moffats' Limited, signed on August 1, 1943, was held by Mr. Justice Kelly to bar the employees of the company for a reasonable time from attempting to negotiate a new agreement through another agency. The Court considered on the basis of the evidence that it was reasonable for the company to conclude, at the time the agreement was executed, that the Council represented a majority of the employees in the plant.

An application by a local of the United Steelworkers of America for certification was therefore dismissed. At the same time, the Court did not consider that the evidence

justified certification of the Employees' Council, which had intervened. The application was dismissed without prejudice to any further application by the applicant or intervener after October 1, 1944. Judgment was delivered on April 11.

The Court found that of the 521 employees, the applicant had, at the time, 218 members in good standing and 33 other employees who desired it to represent them.

In June, 1943, certain employees circulated a petition with a view to forming an association for the purpose of bargaining with the management. On presentation of the petition, bearing 383 signatures, to the management on June 14, the latter indicated its willingness to deal with the proposed association if it was properly constituted. An election of a shop council was then held, at which 422 employees voted, and the shop council drew up a constitution which was posted and circulated in booklet form. Negotiations were started with the company and an agreement signed on August 1.

The evidence showed that when the petition was circulated, the applicant was also carrying on organizing activity and there was considerable discussion in the plant of the respective merits of the organizations. The Court was convinced, therefore, that the employees who signed the petition—about two-thirds of the payroll at the time—were well aware that they were sanctioning the formation of an association to negotiate on their behalf. Moreover, the constitution provided a method of dissolving the association and a petition for its dissolution had actually been circulated in December, 1943, without apparent success.

It was alleged by the applicant that the management had assisted in the circulation of the petition by permitting it to be circulated in working hours and by allowing it to be typed in the company office without a charge. Some witnesses claimed that certain foremen had urged employees to vote. It was admitted, however, that the balloting was secret and no effort was made to influence the way in which tny employee voted. The Court concluded that:

> While the evidence might indicate that the management showed a preference to the organization of the Intervener, rather than the Applicant, I think it falls far short of showing that the Intervener was coerced, restrained or influenced by the management.

Local 3129, United Steelworkers of America v. Moffats' Limited et al., April 11, 1944.

Mine, Mill and Smelter Workers' Union Certified at Lakeshore Mines

On April 8, Mr. Justice Roach ordered certification of a local of the International Union of Mine, Mill and Smelter Workers as the collective bargaining agency of the employees of Lakeshore Mines Limited. The order for the vote to be held was given on March 3 and at that time the Court gave a somewhat different direction regarding organizing and electioneering than in previous cases. Circulation of factual statements approved by the Registrar was permitted, but meetings of the members of either of the competing organizations was prohibited. At the hearings on both March 3 and April 8, the company took objection to certain material circulated by the union but the Court considered it not to be in violation of the orders prohibiting electioneering. (A direction similar to that mentioned above was given in another case dealt with by Mr. Justice Roach on the same day.)

Counsel for the company argued that, while there were "some substantive rights," nevertheless, "in the field of collective bargaining, no right has been conferred, because no one was constituted who was competent to receive that right to exercise or enforce it." In the view of the Court, this argument ignored the fact that the Provincial Legislature, by virtue of its power in relation to property and civil rights, had the power to confer juristic personality on an entity which did not otherwise possess it and that the Collective Bargaining Act had done this by giving a collective bargaining agency the right under certain circumstances to apply to the Court.

To the claim that the Act conflicted with existing legislation of the Parliament of Canada, the Court replied that the purpose of the Dominion Industrial Disputes Investigation Act was not to provide protection for workers in the exercise of their right to organize and bargain with their employers but to establish machinery for the settlement of disputes. Order in Council P.C. 3495 as amended did not alter the situation because it merely extended the coverage of the Act. The only doubt which could arise would be over Sec. 5 of Order in Council P.C. 4020 as amended, which gave the Dominion Minister of Labour power to direct an investigation into an allegation that a person had been discriminated against for trade union activity or coerced into joining a trade union, and to issue remedial orders on the basis of the investigation. Sec. 7 of the Collective Bargaining Act prohibited discrimination against employees for trade union activity, but even if this section conflicted with Sec. 5 of P.C. 4020, the validity of the Act as a whole would not be affected. There was, however, no real conflict even at this point because Sec. 7 of the Act was merely one of several sections which were ancillary to the main purpost of the Act. No difficulty arose out of the recent Wartime Labour Relations Regulations, because Order in Council P.C. 2301 provided that the regulations would not affect the jurisdiction of the Labour Court in regard to proceedings pending on March 30.

Certain other points also arose in connection with the application. It was suggested by the company that because of the hostility between the applicant union and the intervener, the former could not properly represent the adherents of the latter and the Court should therefore direct the bargaining representatives to be chosen by a vote of all the employees. The Court held that it had no authority to require such a vote since the Act leaves the choice of bargaining representatives to the certified agency. The intervener requested that the applicant should be required, as a condition of certification, to refrain from soliciting members from among employees who were not at the time members. The Court could find no warrant for imposing such a restriction.

By agreement between the parties, brickmasons were not included in the bargaining unit. Some disputes arose over the inclusion of 21 employees of the General Smelting Company,

but the Court ordered them included since it found that the General Smelting Company conducted reclaiming operations at the Steel Company plant and that the employees engaged in these operations were hired, supervised and discharged through the Steel Company. *Local 1005, United Steelworkers of America* v. *Steel Company of Canada limited et al*, April 5, 1944.

The case first came before the Court in October, 1943, when the Lakeshore Workmen's Council applied for certification and the union intervened. The Court at that time ordered a vote, but the number of votes cast for neither agency, was sufficient to prevent either from obtaining a majority. On November 23, therefore, the Court ordered another vote, with only two alternatives appearing on the ballot. On November 27, the order calling for a second vote was rescinded because the union had in the meantime circulated a pamphlet which the Court felt would have a disturbing effect and would thus vitiate the results of the vote. The Court ruled that no vote could be held before February 1, 1944. (L.G., 1943, p. 1753.)

In March, 1944, the case again came up. Counsel for the company alleged that further inflammatory material had been circulated, but the Court did not agree. It found that every reasonable effort had been made to call in the pamphlet which had given rise to the original trouble and that though certain further material had been circulated which "might well have been modified in tone", it did not justify a further postponement.

> Having regard to the enthusiasm of the organizers for the intervener and the enthusiasm of those who favour the applicant, the longer a vote is delayed the greater is the danger of the enthusiasm of those persons breaking out to a point where they do or say something that should not be done or said in view of a pending vote.

The Court therefore ordered a vote and gave the direction already mentioned with regard to electioneering.

Of the 472 eligible employees, 444 voted. Three ballots were spoiled and of the remainder 235 were marked for the Union and 206 for the Workmen's Council. The Mine, Mill and Smelter Workers were therefore two votes short of receiving a majority of the votes of all the eligible employees. The Court, however, followed the principle which was first laid down in the *Glass Bottle Blowers* case (L.G., 1943, p. 1751) that when the majority of the eligible employees vote, an agency which receives a majority of the votes cast can be considered to represent a majority of all the employees unless there is evidence to the contrary.

Counsel for the company objected to a circular issued by the union while the vote was pending. The circular as distributed contained the following sentence which the Registrar had struck out of the draft submitted to him: "Make your answer by voting for Local 240." The Court found no objection to this sentence, whether it had been inserted purposely or by oversight, because it merely stated "specifically everything that is contained in" was that a copy of the circular was found on a company bulletin board with a picture of Mr. Stalin pasted on it. The Court, however, could find no evidence that this was anything but ferentially" in the pamphlet. Another objection an isolated copy and it believed that it was the work of some over-enthusiastic person who might be in sympathy or not in sympathy with the union.

The question of the relationship of the Collective Bargaining Act to the Wartime Labour Regulations was also raised. Counsel for the company argued that though the jurisdiction of the Labour Court was reserved to it by Order in Council P.C. 2301, yet effect should be given to the definition of "employee" contained in the Regulations rather than that in the Act. The Court pointed out that P.C. 2301 provided that where the Labour Court had certified a bargaining agency, the agency would be deemed to have certified under the Wartime Relations Regulations. *Lakeshore Workmen's Council v. Lakeshore Mines Ltd.*, April 8, 1944.

Validity of Ontario Collective Bargaining Act Upheld

In certifying a local of the United Steelworkers as the collective bargaining agency for the hourly and production employees of Steel Company of Canada, Mr. Justice Mackay had to deal with the respondent company's argument that the Collective Bargaining Act was not valid. It was argued that the act was *ultra vires* of the Ontario Legislature, or, alternatively, that it did not apply to the Steel Company of Canada, since this company was covered by the Dominion Industrial Disputes Investigation Act as extended by Orders in Council under the War Measures Act. The Court took the view that the act fell within the legislative powers in relation to property and civil rights bestowed on the provinces by the British North America Act and that it did not conflict with any of the provisions of the Industrial Disputes Investigation Act or of the wartime Orders in Council in force at the time.

On January 10 the Court directed a vote to determine if the employees wished to be represented by the United Steelworkers, by an intervening organization called the Independent Steel Workers' Association, or by neither agency (L.G., Feb., 1944, p. 240). The Registrar reported that of 4,463 employees eligible to vote, 3,781 voted, 2,461 ballots being marked in favour of the applicant, 889 for the intervener and 393 for neither, with 38 being rejected. No objection was taken to the Registrar's report but after the vote was taken the company was granted leave to amend its reply to the applicant's statement of facts in order to raise the constitutional issue.

On this point the Court stated that the purpose of the act was to "give legal protection to what have commonly been acknowledged to be the rights of labour, namely the right to organize freely and the right to bargain collectively."

> Legislation of this character falls within the exclusive authority of the province to enact legislation in relation to property and civil rights in the province and it is clear from the case of *Toronto Electric Commissioners* v. *Snider et al* (1925) A.C. 396, that such legislation, save where it is confined to industries within the exclusive jurisdiction of the Dominion, is not within any of the enumerated powers of the Dominion Parliament set out in s.91 of the British North America Act.

Prices

Prices, Retail and Wholesale, in Canada, April, 1944

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index registered a further small increase of 0·1 points to 119·1 in April (1935-39=100). (*See* Table I.) Higher food prices were mainly responsible for the advance, a gain of 0·4 to 131·5 for this series reflecting higher quotations for vegetables and oranges. Eggs, lard and meats were lower. The clothing series moved up 0·1 to 121·4 during the month while the remaining groups were unchanged at index levels of 111·9 for rentals; 113·0 for fuel and lighting; 118·4 for home-furnishings and services and 109·0 for miscellaneous items.

On the base August, 1939=100, cost-of-living index movements for eight regional cities generally were higher between February 1 and April 1, 1944. (*See* Table II.) Vancouver recorded a gain of 0·5 to 117·2, due to an increase of 1·8 for foods. City indexes for Halifax at 118·2 and Winnipeg at 115·7 were each 0·3 points higher, while Toronto at 117·2 and Montreal at 121·2 were up 0·2 points. Saint John at 118·7 and Saskatoon at 119·4 were up 0·1 while the Edmonton index remained unchanged at 115·7. City index advances were largely supported by strength in foods.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

(b) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(c) Rents marked (c) are for apartments or flats. Other rent figures are for single houses. Apartment and flat rents have been shown where this type of dwelling is more common than single houses.

store prices were not warranted although chain store prices are used in the calculations of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a $4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between $600 and $2,800 in 1938. The average expenditure was $1,413.90, divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home-furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last-named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index brought the total family living expenditure to $1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home-furnishings, etc., with their weights, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE under the title, *Price Control in Canada.*

Wholesale Prices, April, 1944

A decline of 0·1 to 102·9 (1926=100) between March and April marked the first reduction in the general wholesale price index since August, 1942. (*See* Table V.) Four of the eight major groups were lower while four were unchanged. Vegetable products receded 0·3 to 95·4 as lower quotations for potatoes, corn, resin and oranges outweighed increases for rye, hay, onions and bananas. The chemical products group also declined 0·3 to 99·9, with certain tanning material prices, shellac, industrial gases and calcium carbide all reported lower. Animal products were down 0·1 to 107·6 with decreases for furs, live stock, butter and eggs more than offsetting strength for fresh meat, fresh milk and lard. A decrease for domestic bituminous coal was reflected in a decline of 0·1 to 102·8 for non-metallic minerals.

The composite index for Canadian farm products fell 0·5 to 104·0. Field products moved 0·6 points lower to 92·4 with weakness in potatoes and grains of greater consequence than higher prices for hay and onions. Easier live stock and egg prices overbalanced strength in fresh milk in the animal products series to lower the section index 0·3 to 123·4.

Old Age and Blind Pensioners in Canada

Financial and Statistical Summary as at December 31, 1943

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act as amended, and under the various provincial concurrent acts, as at December 31, 1943. (The text of the Old Age Pensions Act was given in the LABOUR GAZETTE for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $300* yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $65* a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (L.G., May, 1937, p. 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $300* per annum. If, however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to $150*. If a pensioner is unmarried the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $140* a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $340*. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $140.*

Under agreements negotiated between the Dominion and the Provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

---

* Amended by Order in Council P.C. 6367, August 10, 1943, passed under the authority of the War Measures Act (L.G., Aug., 1943, p. 1068).

PENSIONS FOR BLIND PERSONS

FINANCIAL AND STATISTICAL SUMMARY OF PENSIONS FOR BLIND PERSONS IN CANADA AS AT DECEMBER 31, 1943

	Alberta Act effective Mar. 7, 1938	British Columbia Act effective Dec. 1, 1937	Manitoba Act effective Sept. 1, 1937	New Brunswick Act effective Sept. 1, 1937	Nova Scotia Act effective Oct. 1, 1937

Fatal Industrial Accidents in Canada During the First Quarter of 1944

DURING the first quarter of 1944 there were 227 fatal industrial accidents, including deaths from industrial diseases, reported by workmen's compensation boards, etc. This compares with 293 fatal accidents in the first quarter of 1943. Of the 227 fatalities in the period under review, 86 occurred in January, 71 in February and 70 in March Fatal accidents during each year are recorded by quarterly periods in the issues of the LABOUR GAZETTE for May, August and November of that year, and in February of the following year.

The supplementary list of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contain 41 fatalities for 1943.

In this series of reports, it is customary to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners, certain other official sources, as well as from the correspondents of the LABOUR GAZETTE and newspaper reports.

Classified by groups of industries, the fatalities occurring during the first quarter of 1944 were as follows: agriculture, 10; logging, 39; fishing and trapping, 3; mining, non-ferrous smelting and quarrying, 31; manufacturing, 53; construction, 14; central electric stations, 2; transportation and public utilities, 53; trade, 14; service, 8.

Of the mining accidents, 20 were in "metalliferous mining", 10 in "coal mining", and one in "structural materials".

Of the accidents in manufacturing, four were in "vegetable foods, drink and tobacco", one in "animal foods", one in "textiles and clothing", one in "leather, fur and products", nine in "saw and planing mill products", four in "wood products", two in "pulp, paper and paper products", 13 in "iron, steel and products", four in "non-ferrous metal products", seven in "non-metallic mineral products", four in "shipbuilding", and three in "miscellaneous products".

In construction there were seven fatalities in "building and structures", one in "railway", five in "highway and bridge", and one in "miscellaneous".

In transportation and public utilities, there were 36 fatalities in "steam railways", two in "street and electric railways", four in "water transportation", three in "air transportation", seven in "local and highway transportation", and one in "storage".

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1944, BY GROUPS OF INDUSTRIES AND CAUSES

In trade there were four fatalities in "wholesale", and 10 in "retail" trade.

Of the fatalities in service three were in "public administration", four in "personal, domestic and business", and one in "professional".

There was no serious disaster resulting in the loss of a large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

Two aluminum plant workers lost their lives as a result of an explosion in a powder plant, at Arvida, Quebec, on February 8.

Two highway construction labourers were killed in a dynamite explosion in a rock quarry, near Prince Rupert, B.C., on January 3.

A fireman and a brakeman died from a fall from a railway tender at Binscarth, Manitoba, on January 15. When two coaches of a train were derailed, near Dalhousie Junction, New Brunswick, two brakemen were killed on January 18. When a train struck an express truck in which they were riding, at Chippawa, Ontario, on March 22, a motorman and two electricians were killed.

Supplementary List of Accidents

A supplementary list of accidents occurring in 1943 has been made. This includes 41 fatalities of which three were in logging, six in mining, non-ferrous smelting and quarrying, 10 in manufacturing, five in construction, 14 in transportation and public utilities, and three in service. Two of these accidents occurred in July, three in August, three in September, 13 in November and 20 in December.

Annual Report of Department of Labour, Manitoba

THE annual report of the Department of Labour of Manitoba for the fiscal year ending April 30, 1943, gives details concerning the administration of various Acts coming within the jurisdiction of the Department.

Inspections.—During the fiscal period May 1, 1942, to April 30, 1943, the Manitoba Department of Labour made 31,279 inspections under Acts administered by the Department and 12,934 orders were issued. In Winnipeg and district 3,377 inspections were made under the Manitoba Factories Acts which resulted in 1,502 orders for the improvement of safety conditions and 112 for the improvement of health and sanitation. In areas outside the city of Winnipeg and district 617 inspections were made under the same Act and these resulted in 581 orders for the improvement of safety conditions and 28 for health and sanitation.

Minimum Wages.—The number of wage claims adjusted in Winnipeg and district was 518 and outside of Winnipeg 166. The amounts collected in Winnipeg and district was $5,169.21 and outside of Winnipeg $4,346.79. The amounts collected on behalf of employees for back cost-of-living bonus in Winnipeg and district was $9,905.80 and outside of Winnipeg $406.62. Information was laid against one employer on behalf of three employees, but the case was eventually settled out of Court, by the employer agreeing to make substantial instalment payment until the amount in dispute was liquidated.

There were 4,836 day inspections and 3 night inspections made in Winnipeg and environs and 810 day inspections and 3 night inspections outside of Winnipeg in connection with the employment of females. Corresponding figures for males were: 3,066 day inspections and 1 night inspection in the Winnipeg district and 878 day inspections elsewhere in the province.

Overtime Permits—Owing to the scarcity of labour and the increase in production, it was found necessary to grant overtime permits to a greater extent than the Department had ever before experienced. This was mainly due to war contracts awarded in the garment and various other industries, where the Department of Munitions and Supply had entered into contracts with the several firms. During ing the year there were 410 permits to work overtime and 20 permits for legal holidays issued covering work in 28 lines of industry.

A total of 4,605 inspections were made under the Steam Boiler and Pressure Plant Act. As a result of these inspections 2,165 repairs were ordered. A special feature of the year's work was the making of progress and final tests of pressure vessels constructed in Manitoba plants for the Synthetic Rubber plant at Sarnia, Ontario. This work was undertaken at the request of the province of Ontario.

Steam Engineers.—A total of 1,312 Steam engineers' certificates were issued during the year. Of these, 1,147 were renewals and 165 were granted following the quarterly examinations set by the Provincial Board of Examiners, under the Steam Boiler and Pressure Plant Act.

Strikes and Lockouts.—Two applications for Boards of Conciliation were filed with the Registrar under the Strikes and Lockouts Prevention Act. A third case was referred to the Regional War Labour Board. Two other disputes were settled by arbitration, without applications having been made for Boards. In addition, four other disputes were investigated for the Federal government under the Industrial Disputes Investigation Act. In the latter cases, 3 were settled to the satisfaction of both the employers and employees, and the other was withdrawn at the request of the employees.

Notes of Current Interest

Recommendations for protecting welders in Ontario

Health Hazards in Welding is the title of a pamphlet prepared by the Division of Industrial Hygiene of the Ontario Department of Health for distribution by the Ontario Industrial Accident Prevention Associations. Welding hazards are divided into three classes: illness caused by inhaling toxic gases and dusts from fluxes, coated rods or the ingredients of the metal; eye injuries from harmful light rays or flying particles of hot metal; and skin burns from contact with hot metal or from ultra-violet rays.

Hazards of the first type can be controlled by proper ventilation. The place and value of both local exhaust and general ventilation are discussed in the pamphlet and a table indicating the number of cubic feet of air per minute required for different types of welding operations is reproduced from the Special Bulletin of the United States Department of Labor entitled *Control of Welding Hazards in Defence Industries.* Where ventilation is inadequate, as in confined spaces, the use of respirators is recommended.

Eye injuries can be prevented by the use of helmets, shields, goggles and screens to protect nearby workers from "side-flash." A table of recommended shades of lenses for different operations is given. The wearing of protective clothing such as gauntlets, arm guards, etc., is necessary to avoid skin burns. It is the responsibility of supervisors to see that workers use protective devices and wear safety clothing.

Quebec Health Insurance Commission reports on child protection

A report concerning day nurseries and the protection of children which was made by the Quebec Health Insurance Commission has been presented to the Government. The Health Insurance Commission was established pursuant to a statute of 1943 to work out a plan of health insurance. The Commission heard witnesses representing more than 110 organizations and inspected institutions, both public and private. The report includes general observations on the principles and problems of child protection, recommendations of an administrative nature, a draft Children's Protection Act, and a survey of present conditions in day nurseries and in other establishments where children are kept.

The Commission considered that the question of protection involves, first, the fundamental principle of reconstituting the family, and, if this is possible, then deciding whether the child's welfare would be best served by placing it in a foster-home or an institution. Each case must be treated on its particular merits.

As regards administration, the Commission was of the opinion that a Department of Social Welfare should be created to administer all statutes concerning the placing of children and social assistance except hospitalization: the Old Age Pension Act, the Needy Mothers' Assistance Act, the Children's Protection Act when adopted, the Blind Persons' Aid Act, the

Child Protection Tuberculosis Act, and the Quebec Public Charities Act with respect to institutions other than hospitals. As a result of this recommendation, a Bill to this effect has been introduced in the Quebec Legislature.

The draft Bill recommended by the Commission was divided by the Government, with slight changes, into two Bills, the Children's Protection Act and the Child Protection Schools Act. They provide for the setting up of a provincial bureau for the protection of children, the Child Protection Superior Council, and the creation of societies having rights of tutorship over neglected or abandoned children and charged with the responsibility of placing a child in a foster-home, in a child protection school or other institution, under apprenticeship or in domestic service. The Children's Protection Act repeals the Industrial Schools Act.

The Commission examined the adequacy of public day nurseries, private nurseries, children's boarding homes, lying-in hospitals and public charitable institutions, and the laws applying to each. The Dominion-Provincial day-nurseries were considered to be meeting a real need, but the Commission thought that private boarding-homes should be compelled to comply with stringent licensing conditions. Also, the children in these nurseries should be periodically weighed.

Agreements on care of children of working mothers in Quebec and Ontario

The Minister of Labour announces that an Order in Council (P.C. 3733) was passed on May 18, amending the agreement between the Dominion and the Province of Quebec on the care of children whose mothers are working in industry. A similar Order (P.C. 2503) was passed on April 6 amending the agreement between the Dominion and the Province of Ontario.

Previously it had been provided that not more than 25 per cent of the children cared for in any approved project would be accepted from mothers working in other than war industry. Under the amendments now made in the agreements, while priority in accepting children will be given to those of mothers in war plants, the Dominion Minister of Labour may agree to share expenses with the province where more than 25 per cent of the children taken care of by any project are the children of mothers in non-war plants.

The projects for taking care of children include day nurseries, for children below school age, and noon-day lunch and before- and after-school supervision for children attending school.

Increases in allowances under Post Discharge Re-establishment Order

Increases in the maintenance allowances which may be paid to ex-service personnel of the present war under the Post Discharge Re-establishment Order have recently been authorized by Order in Council (P.C. 4/3655, May 15).

The allowances now payable to discharged members of the Forces, continuing their education or taking vocational training, will be at the rate of $60 monthly for a single man and $80 monthly for a man and his wife. Rates for those awaiting returns from private enterprise, such as a small business or a farm, for those fit and available for work, but for whom no suitable employment can be found, and for persons temporarily incapacitated, will be $50 monthly for a single man and $70 monthly for a man and his wife. In addition, in all cases, allowances will be paid for dependent children and certain dependents on approximately the same basis as paid by the Dependents' Allowance Board during the period in service.

Rates in all categories were previously $44.50 monthly for a single man and $62.40 monthly for a man and his wife.

It was explained that the increase in the training grants is larger because a man taking training, or continuing his education, has certain expenses which are directly due to his training. Moreover the desire is to encourage all ex-service personnel who need training and will benefit by it to take advantage of the training provisions of the rehabilitation program.

Post-war preparation in British Columbia

The Post-War Rehabilitation Council of British Columbia, under the chairmanship of Hon. H. G. T. Perry, Minister of Education, has recently issued a comprehensive supplementary report covering its activities subsequent to the publication of its interim report in January, 1943. In addition, it has issued a concise summary of the recommendations contained in both reports.

The Council was established under Section 8 of the Post-War Rehabilitation Act of February, 1942, and of Order in Council No. 354 of March 23, 1942. It is made up of ten members of the provincial legislature who receive no additional compensation other than travelling expenses and living allowances while attending meetings of the Council. It has carried out extensive surveys of possible fields for employment after the war, on the assumption that special forethought is essential if the province is to avoid "the grave repercussions of post-war readjustment which can be reason-

ably expected to arise out of the dislocations of the present war."

In the introduction to the summary it is pointed out that, "the Dominion Government has already assumed leadership in this field, establishing advisory committees and preparing legislation on a wide variety of post-war topics. But as the largest custodians of natural resources and the constitutionally responsible authorities for considerable economic and social policies the Provincial governments will be implicated voluntarily or involuntarily in these Federal post-war measures." Again, "the exploratory studies and decisions made now, in the light of existing information, can be revised as circumstances dictate, but if the matter is left completely untouched, the opportunity to reach a *considered* decision will have been forever removed and last-minute, improvised methods will have to be employed."

It is urged that, "the post-war problems of British Columbia, as elsewhere, will be so complex they cannot be solved by the government alone. They require the fullest co-ordination between the three governments, Federal, Provincial and Municipal," as well as "the intelligent co-operation of workers, farmers, industrialists and all citizens."

With this postulate in mind, the Council has taken stock of the assets of the province and has compiled a considerable volume of current information with respect to such factors as the following: Agriculture and land settlement, including legislative requirements pertaining thereto; fisheries; forests and parks; mining and prospecting; water-power; new industries; apprenticeship and vocational training; co-operatives; public works; transportation; regional and town planning; housing and social security. Numerous recommendations concerning these, which, although necessarily tentative, may prove of great value in formulating lines of action immediately following the end of the war.

Post-war planning in Alberta

The Alberta Post-War Reconstruction Committee set up under an Act of 1943, has presented an interim report to the Legislature containing 180 recommendations dealing with agriculture, finance, natural resources, trade and industry, public works, social welfare, education and vocational training.

In the field of labour and industry, the Committee considers that union agreements and agreements under the Industrial Standards Act should be extended, that minimum wage rates should be adjusted to meet changing conditions, that hours of work should be progressively reduced, and that the principle of equal pay for men and women should be accepted. An apprenticeship Act ensuring high standard of instruction is desirable. The Committee urged that the status of skilled domestic workers be raised.

Under the heading of social welfare the Committee made recommendations concerning housing, medical services, nutrition, decentralization of industry, recreation services, parental education and child guidance, veterans' re-establishment, old age pensions and training of social workers. The resolution is put forward that "full provision be made now to ensure that all families may have the guarantee of adequate economic security with freedom."

As regards agriculture, the Committee recommended the expansion of wool production and linseed oil extraction, soil surveys, chemurgic research, and studies of farm management and rural electrification; the collection of data concerning crop insurance and the distribution of information regarding co-operative associations and credit unions. It considered that the government should retain control over potential water-power sites. The regular employment and equitable treatment of farm labour requires stabilization of "farm price relationships."

The Committee feels that the public should be enlightened about the unsatisfactory conditions in the teaching profession. Salaries, training, legal status, pension provisions and rural living conditions must all be improved. One-room schools should be replaced by graded rural schools. The number of exclusively vocational schools should not be increased until it is seen how well community schools in conjunction with an apprenticeship system will serve the purpose.

Cost of living advances fractionally

The Dominion Bureau of Statistics cost-of-living index increased from 119·1 on April 1 to 119·2 on May 1, 1944. Fractional advances in the food, clothing, and home-furnishings group indexes outweighed a moderate decline in the fuel and lighting section. The food index rose from 131·5 for April to 131·7 for May, as cabbage, carrots and oranges increased in price while small declines occurred for potatoes, eggs, and some cuts of meats. Lower coal prices in western centres and removal of the provincial sales tax on coal in Quebec combined to reduce the fuel and lighting series from 113·0 to 112·5. The clothing index changed from 121·4 to 121·5, while home-furnishings and services also moved up 0·1 to 118·5. Rents remained at 111·9 and miscellaneous items at 109·0. After adjustment to the base August, 1939, as 100 the index was 118·3 at May 1.

Employment and industrial statistics

The table below shows the latest statistics available reflecting industrial conditions in Canada. Continued contraction in industrial employment was revealed at April 1 by the figures published by the Dominion Bureau of Statistics. Although conforming with the seasonal movement since 1921, the decline in April was less than average. The index was 180·5 at April 1 and 181·7 at March 1 as compared with 180·6 at April 1, 1943, and 104·9 at April 1, 1939. The 14,447 establishments reporting to the Bureau showed a total working force of 1,817,600 at April 1 which was 0·7 per cent smaller than at the

* Many of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

† Week ended May 25, 1944.

(1) Base, 1926=100. (2) Figures are for the end of the preceding month. (3) Base, June, 1941=100. (4) Base, 1935-1939=100. (5) Adjusted, where necessary, for seasonal variation. (6) Notes in the hands of the public. (7) Figure for four weeks ended May 27, 1944, and corresponding previous periods. (8) MacLean's Building Review.

beginning of March. The total weekly wages and salaries paid to these employees amounted to $58,766,821, a decrease of 0·5 per cent from the previous month. Per capita weekly earnings advanced to a new high level of $32.33 at April 1, from $32.27 at March 1.

Employment declined at April 1 in the manufacture of both durable and non-durable goods while increased activity was noted in transportation, trade, communication and services. Other industries to show decline at April 1 were logging and construction. Employment in the mining industry remained fairly stable.

The index of the physical volume of business recorded a decline to 239·5 in April from 247·8 in the preceding month. This compares with 236·9 for April, 1943. In the industrial group, lower volume was indicated for mineral production, manufacturing, construction and output of electric power while the distribution group was higher.

The trend of economic conditions averaged higher in the first four months of 1944 than in any other similar period in the record. The business index for this period averaged 5·9 per cent over the first four months in 1943. In the same comparison wholesale prices advanced 4·9 per cent, bank debits 15 per cent, mineral production 7·4 per cent, manufacturing 3·4 per cent, cattle slaughterings 24·8 per cent, hog slaughterings 67 per cent, cheese production 8·4 per cent, steel production 2·1 per cent, construction contracts awarded 44 per cent, the value of commodity exports 34·2 per cent, imports 2·7 per cent, carloadings 10·2 per cent and the estimated national income gained 10·2 per cent. The production of coal declined 4·5 per cent, of creamery butter 12·4 per cent, and the consumption of raw cotton 9·9 per cent in this same comparison.

V. C. MacDonald, K.C., relinquishes office of Assistant Deputy Minister

V. C. MacDonald, K.C., Assistant Deputy Minister of Labour, who has been on leave from the post of Dean of the Law School of Dalhousie University, is being recalled to Halifax to resume his former post, according to an announcement made by Hon. Humphrey Mitchell, Minister of Labour.

Mr. MacDonald, who has occupied the position of Assistant Deputy Minister of Labour since September, 1942, while now returning to the Halifax University, will not completely sever his connection with the Department of Labour. With the title of Assistant to the Deputy Minister of Labour he will continue on a part-time basis with the Department and particularly will assist in the direction of wartime loading at the Port of Halifax. Previous to his full-time connection with the Department, Mr. MacDonald had functioned for the Department as arbitrator of the Port of Halifax, and later as controller of ship-loading operations.

Commenting upon Mr. MacDonald's departure from Ottawa, the Minister of Labour stated: "It is with very genuine regret that I announce that Mr. MacDonald is relinquishing the office of Assistant Deputy Minister. His services to the Department have been outstanding, and while we can appreciate fully the need and desire of Dalhousie University to have him return to his university post, I would like to emphasize that his services have been most valuable while connected with us. We are pleased that we will still be able to call on him from time to time for special assignments."

Department of Labour brochure on labour standards

Provincial Labour Standards Concerning Child Labour, Hours of Work, Minimum Wages and Workmen's Compensation is the title of a brochure published early in June by the Department of Labour. It is a compendium of extensive comparative studies of legislation in the several Canadian provinces. The section on minimum wage rates covers only rates paid for experienced workers. Copies of the brochure may be obtained by applying to the Labour Legislation Branch, Department of Labour, Ottawa.

Accident prevention in British flour milling industry

The Factories Committee of the National Joint Industrial Council for the Flour Milling Industry has recently published a leaflet containing an analysis of the milling accidents reported to the Factory Department of the Ministry of Labour and National Service in 1942 and recommendations for preventing accidents in the industry. The Committee was established in 1927 to study the provisions of the Factories Act and regulations which apply to the flour milling industry. It consists of an equal number of representatives from each side of the National Joint Industrial Council which was formed in 1919, and a Superintending Inspector of Factories.

During the 16 years of the Committee's work from 1927 to 1942 milling accidents have dropped from 628 to 290 in a year. "The Committee feels," it is stated in the leaflet, "that this reduction in the number of accidents reflects the increased interest in the subject of accident prevention taken by the industry and they regard this . . . as one of the most valuable pieces of work that the

council performs." However, the Committee has declared that it will not be satisfied "as long as a single preventable accident occurs."

Of the 290 accidents reported in 1942, 192 were non-machinery accidents such as falls, strains from lifting heavy weights and injuries caused by falling bodies. Only two accidents were fatal, one involving a woman. Total accidents to women rose from 27 in 1941 to 76 in 1942, reflecting the increased employment of women. Three women suffered strains from moving 140-lb. bags a short distance. The Flour Mills (Hours, Safety and Welfare) Order issued in January, 1942, forbids a woman to lift weights exceeding 65 lbs. unassisted, but permits a woman to handle from 65 to 140 lbs. with the aid of another worker. It was found that the greatest number of accidents happened during the morning shift from 6 a.m. to 2 p.m. and very few during the night shift.

Details of all accidents caused by machinery in motion are given and a few non-machinery accidents described. Among the precautions recommended are adequate guarding of machinery, and sleeving of shafts, wearing of protective clothing and goggles where necessary, care in the use of man-hoists, provision of proper first-aid outfits and measures to reduce the hazards from belts and worms. To protect women from weight-lifting injuries, employers are urged to provide a roll conveyor or hand-truck for moving flour bags from the packing spout to the weighing scale. A list of safety rules for workers is also given in the pamphlet.

Labour representation on Department of Labour boards and committees

Organized labour now has a total of 352 representatives serving on 125 boards and committees associated with the Department of Labour, National Selective Service and Unemployment Insurance Commission, according to a return tabled by Hon. Humphrey Mitchell, Minister of Labour, in the House of Commons.

The information tabled shows representatives of trade unions on 11 national, 19 regional, and 95 local boards and committees connected with the Department. In each case trade union representation is paralleled by that of employers.

Among the national boards are the National War Labour Board, the Unemployment Insurance Commission, the National Selective Service Advisory Board, the Vocational Training Advisory Council, the Wartime Labour Relations Board and the Advisory Committee to the Industrial Production Co-operation Board.

Regional boards include Regional War Labour Boards and Selective Service and Employment Advisory Committees. Local committees include Courts of Referees under the Unemployment Insurance Act, which handle as well appeals against Selective Service rulings, and also local employment advisory committees.

Controlling absences and fatigue in British factories

Absence from work and industrial fatigue are the subjects dealt with in the second pamphlet of the British Industrial Health Research Board's series on Conditions for Industrial Health and Efficiency. The causes of poor attendance, fatigue and boredom are analyzed and ways of solving these problems suggested. Short bibliographies on each topic are given.

Excessive hours of work are considered one of the chief causes of both absences and fatigue. It is recommended that weekly hours should be limited to 55 for women and 60 for men and should be further reduced for men on heavy work and women with home duties. Adequate week-end breaks and rest pauses during the day are also very important in preventing fatigue. Those needing to recuperate from accumulated fatigue should take advantage of the holiday facilities provided under the wartime rest-break scheme.

Figures gathered from nearly 60 factories, some employing as many as 25,000 persons, show that women lose about twice as much time as men and married women may be absent three times as often as single women. Women with home responsibilities who cannot manage full-time work without absences and illness are urged to accept part-time employment.

The importance of good labour-management relations in combatting absences and fatigue is stressed. A contented worker is less prone to fatigue and it has been found that:

> Absence is lowest in factories where the workers and the management get together to help each other in solving the problems of factory production, discipline and policy.

It is pointed out that workers must be made aware of the significance of their job in the war effort and impressed with their responsibility to keep fit and to prevent interruptions in production by notifying their foreman when they expect to be away. Efforts should be made to see that each worker is placed in the job for which he is best suited and to adapt the design and speed of machines to the individual.

Unfavourable working conditions such as bad air, poor lighting, extremes of temperature and lack of canteens, rest and recreation facilities, have been found to increase absences and fatigue. Difficulties outside the plant connected with transport, lodgings, shopping and

home responsibilities also affect attendance and efficiency. Employers are urged to improve working conditions and promote community action to solve the external problems.

Boredom which is often confused with fatigue arises from monotonous work, payment on a time rather than a piece basis, discontent and lack of social intercourse in the work. It may seriously affect both attendance and output but can be overcome by granting rest pauses, providing music and recreational facilities, rotating jobs among workers and stimulating interest by competitions, films, pictures and talks on the part played by the plant's products in the war.

Hours of work in wartime Britain

For the first time during this war figures have been collected and published on the actual hours worked by almost all types of industrial workers in Britain, according to the May issue of *Labour and Industry in Britain*, a monthly review published in the United States by the British Information Services.

It is shown that, for the occupations covered, the average for men of 21 years and over was 52·9 hours a week; for women of 18 years and over, 45·9; for youths 14 to 20, 48; and for girls 14 to 17, 45·1. The average for all workers was 50 hours a week. These figures relate to the total number of hours actually worked, including overtime and excluding all time lost as well as recognized intervals for meals. They do not show, however, the considerable differences that exist within single occupations, nor do they show the differences that arise in individual plants which are governed to a considerable degree in wartime by the urgency of the need for the goods produced.

It is pointed out that the basic working-week for men in most union contracts in Britain is about 47 to 48 hours, with overtime pay of one and a quarter to one and a half, and double pay for Sundays and holidays. Except in coal mining, there is no legal limit to the hours of adult men, but the actual hours for women and young persons from 14 to 17 years are limited to between 44 and 48 hours, unless special governmental permission is given.

At the outbreak of war hours increased generally, the greatest expansion coming immediately after Dunkirk in 1940, when hours were increased to 70, 80 and even 90 hours a week. However, it was realized that this could not and should not be maintained and the government set as an objective a maximum of 60 a week for men and 55 for women. The extension of the system of three eight-hour shifts, where it is in effect, brought the weekly hours to 48 for a six-day week. Where the two-shift system is in operation, a shift of ten hours is often worked, giving about 55 to 56 hours for a week of five and a half days, the normal working period.

Instigating strikes prohibited in Great Britain

A new Defence Regulation (No. 1AA) was issued in Great Britain on April 18 providing that anyone instigating or furthering a strike or lockout among persons engaged in essential services will be liable on a conviction on indictment to a maximum penalty of five years' imprisonment, a £500 fine or both. The Regulation does not apply to persons who are withholding their labour nor to any act done by a trade union member at a duly summoned meeting of his union. No prosecution may be instituted under the Regulation except with the consent of the Director of Public Prosecutions.

In addition Regulation 1A has been amended to bring it into line with the new Regulation. It prohibits acts calculated to prevent or interfere with any person engaged in essential services from carrying on his work. It formerly provided that it was not an offence merely to take part in or peacefully persuade others to take part in a lawful strike, but this provision has now been amended to cover only the persons excepted from the application of Regulation 1AA.

The new Regulation was passed after lengthy consultation between the Minister of Labour and National Service and his Joint Consultative Committee which consists of trade union and employer representatives. Both the Trades Union Congress and the British Employers' Confederation endorsed the action of their representatives on the Consultative Committee, although the National Union of Distributive and Allied Workers protested to the T.U.C. for having done so without prior consultation with its affiliated unions. The Minister of Labour explained in the House of Commons that the new Regulation was to be regarded purely as an emergency measure and that it was designed to prevent the recurrence during the invasion period of strikes which did not have union approval.

Industrial welfare and personnel management in Great Britain

A small handbook entitled, *Outline of Industrial Welfare and Personnel Management* was published recently by the "Industrial Welfare Society (Inc.)", 14 Hobart Place, London, S.W.1, which is designed to provide initial information on the organization of welfare and personnel work in industrial plants

It is pointed out in the introduction that "industrial welfare, personnel management, or labour management—by whatever title it is called—forms an essential function of every industrial organization, and upon its proper performance depends to a large degree the prosperity of the business and all employed in it."

In every business concern, however small, workers must be engaged, trained, transferred, promoted, or, if necessary, dismissed. Legal requirements must be met and in many, if not most, plants welfare facilities such as first-aid rooms, canteens, etc., are coming to be regarded more and more as necessities. In all plants, whether large or small, the head of the business must, in the last analysis, assume responsibility for the handling of these matters. In larger plants, however, authority is generally delegated to personnel staffs, to organize, develop and apply the directives laid down by the management.

The handbook outlines the principles involved under the following headings:

(1) Employment; engagement of labour, introduction to the job, personnel records, internal memoranda, information for reference, welfare and personnel reports.

(2) Working conditions; health, accident prevention, etc.

(3) Relationships within the factory or plant.

(4) Outside welfare: housing facilities, transportation, recreation, help to workers in cases of legal and financial difficulties, etc.

Sources of more detailed information, as well as suggested specific plant personnel organizations are given in the appendices.

Safeguarding synthetic rubber workers in U.S.A.

A series of four pamphlets on methods of safeguarding the health of workers making and processing synthetic rubbers is being prepared by the United States Department of Labour. One on Neoprene has just been published; subsequent ones will deal with Buna S, Buna N, Butyl and Thiokol. In 1944 the United States expects to manufacture over 800,000 tons of these products, equalling the amount of natural rubber imported in 1941. Investigation has shown that relatively few workers handling the basic raw materials used in making synthetic rubbers are exposed to health hazards unless enclosed operations break down, but the health of those employed in processing and fabricating operations may be affected if vapours, gases, irritating dusts and excessive heat are not controlled by proper engineering.

In the pamphlet on neoprene, the various types of synthetic rubber, their manufacture and wartime uses are described in detail. Made from coal, limestone, water and salt, neoprene is used in rubber life-boats, barrage balloons, engine cowlings, gaskets, hose, rubber-covered wire and for many other military and industrial purposes. Because of its resistance to oils, sulphuric and hydrochloric acids and other chemicals even at elevated temperatures, it has been used for the past decade in safety clothing. The American Standards Association at the request of the War Production Board is developing specifications for safety clothing which may be manufactured from approved synthetic substitute materials.

It is pointed out that neoprene in the form sold to manufacturers is harmless to workers, but dangerous fumes, gases and dusts and fire hazards may arise in compounding and processing operations. However, most of these hazards were also met in the natural rubber industry, and have been successfully controlled.

Adequate ventilation is very important. Systems of both general and local exhaust ventilation are described and illustrations of effective ventilating devices given. In both cases:

> "the theory of operation in design and installation is simply to take advantage of the natural tendency of heavier-than-air solvents to collect at low levels and to allow solvent vapours to travel the shortest possible path from the point of operation to the point of exhaust."

Effective precautions against fire and explosion are suggested, including the teaching of safe practices to workers. Over 50 per cent of rubber plant fires are caused by electricity, static sparks and friction. A table is included giving the flash point, ignition temperature, explosive or inflammable limits and the extinguishing agent for common solvents used in neoprene processing and fabrication, and safety rules are laid down for the storage, handling and use of these solvents. The importance of personal cleanliness to avoid skin infection from handling neoprenes and their solvents is stressed.

Wartime training courses for women in United States

The War Manpower Commission at Washington has reported that more than 2,000,000 women of all ages in the United States have received training in public vocational and in academic institutions that assist in preparing workers for wartime work. Of these 1,136,576 were trained as war production workers and 678,379 for food production.

A total of 230,411 were enrolled in engineering, science and management courses in colleges, and 160,000 in training-within-industry courses.

U.S. board upholds management's right to discipline workers striking in violation of agreement

On May 16 the United States National War Labour Board over-ruled a decision of the Eleventh Regional Board in Detroit and upheld the right of management to discipline employees who go on strike in violation of the terms of a collective agreement. Labour members of the Board dissented.

The case arose out of a walk-out by 41 employees of the Borg-Warner Corporation at Muskegon, Michigan, in protest against delay in handling a grievance presented by them to the Company against a worker in their department. During the preceding six months the union to which the employees belonged, the United Automobile Workers, affiliated with the American Federation of Labor, had filed three grievances against the same worker. After the company had dismissed the third complaint, the union sought à review by the union's international representative and the general manager of the company—the last step in the grievance procedure provided in the agreement. Before the company and union representatives could meet, the walk-out occurred.

The company refused to reinstate the 41 employees and as a result a plant-wide strike took place on December 22 and lasted till January 3. The Board condemned this procedure, stating that the union should have appealed the discharges on an individual case basis through the recognized grievance procedure, to determine whether discharge was the proper penalty in each case. Dr. G. W. Taylor, Vice-Chairman of the Board stated, in giving the majority opinion, that "the responsibility for disciplining employees must rest with management; it is the right of the union to see to it that discipline of its members is for cause." At another place he said that "a proper use of the grievance procedure by the union could probably have avoided the unfortunate difficulties which have come to so many employees over this case."

The Regional Board in Detroit had ordered the 41 employees reinstated without back pay, but the National Board directed that they make application for re-employment within 15 days and that the company "make every reasonable effort to consider the case of each applicant in relation to his individual responsibility for the stoppage of work."

Increase in placement of handicapped workers in United States

Recent studies of the utilization of handicapped workers in the United States have shown that placements of such workers in 1943 were approximately eight times the number placed in 1940, according to a statement made in the *U.S. Labor Press Service*.

In 1940, when production was stepped up to meet the needs of the allied nations for war materials, 27,703 placements of handicapped persons were made. In 1941, this number was nearly doubled and in 1942, following Pearl Harbour, the total went up to 91,410. At the end of 1943, records showed 194,129 handicapped persons had been placed during that year.

The chairman of the War Manpower Commission, Paul V. McNutt, has pointed out that not all physically handicapped persons are vocationally handicapped, since a person's disability may not interfere with his particular occupation. "Of 8,100,000 physically handicapped men between the ages of 15 and 65 (in the United States) about 6,700,000 need only selective placement, 1,000,000 require rehabilitation before employment in industry and about 350,000 need extensive rehabilitation and should be restricted to sheltered work." He continued: "Proper placement and training, coupled with employer acceptance, has enabled us to use a substantial portion of this reserve to ease our critical labour shortage."

Industry's rapidly changing attitude toward employment of physically handicapped men and women, in the United States, as evidenced by the rapid increase in hiring of such persons since the beginning of the present war has, it is stated, convinced the War Manpower Commission that a far higher percentage of jobs for this war's casualties can be found than was available for those of World War 1.

Workers' vacations in the United States

"Vacations to renew their energies and enthusiasm are needed by American workers and," in the opinion of Donald M. Nelson, Chairman of the War Production Board at Washington, "it is now time to make arrangements for them."

"In a prolonged war, such as this, there is great danger of chronic fatigue and consequent loss of production from increased illness and injuries and decreased quantity and quality of goods produced," Mr. Nelson asserted.

However, in order that vacations may not curtail production, it is essential that labour and management should plan carefully. The shutting down of plants for vacation periods is to be deprecated. Staggered vacation

schedules may be required, other employees may have to be trained to handle the work temporarily and a greater measure of overtime may be necessary, in order to avoid a decline in production.

It is important to emphasize, Mr. Nelson pointed out, that workers should not be permitted to waive their vacations in order to receive vacation pay as additional income. "Such a practice would defeat the whole purpose of vacations."

Nevertheless, it is urged that civilian travel by rail and by bus be avoided as far as possible. Such means of transportation "has reached its peak limits," it is stated, and needless travel must stop if a crisis is to be prevented. "Spend your vacations at home," is urged by the Office of Defence Transportation. It is pointed out that troop movements now account for more than 1,500,000 passengers a month in the United States. This requires the full time use of nearly one-third of the available day coaches and over one-half of the Pullman sleepers.

Industrial poisoning in American shipyards

A total of 495 disabling cases of chemical poisoning or occupational disease in American shipyards were reported to the United States Department of Labour during the first nine months of 1943. While this figure is small compared to the 41,179 disabling accidents in the same period, the medical records of one large yard show that for every disabling case of industrial poisoning, there are approximately three known non-disabling cases. A case is considered disabling if it results in inability to work beyond the day the case is reported.

About 200 of the 495 cases were classed as metal fume fever resulting from the inhalation of zinc oxide fumes produced in welding or burning galvanized metal. Nearly 200 more were from inhalating other fumes, smokes or dusts and 98 were cases of dermatoses caused by various chemicals, fumes and dusts. The fact that two-fifths of the 260 workers overcome by welding fumes were not welders indicated the need for improved ventilation, particularly in confined spaces. The reports showed that many of the burners affected by fumes had little understanding of the hazards of their work and their supervisors did not always see that they used proper respirators and ventilating equipment. Many of the cases resulting from inhaling dusts and fumes in painting and paint-removing operations were traced to wartime substitutes. Effective precautions can be taken only if plant medical and safety departments are fully informed as to the composition of paints, thinners and solvents.

Carbon monoxide poisoning resulted usually from violations of yard rules which alert supervisors should have enforced. A number arose from the use of salamanders or makeshift stoves for heating purposes in enclosed work places. Others were caused by the operation of motor vehicle and portable gasoline engines inside buildings.

In nearly all the dermatosis cases there had been continued exposure over a long period to such irritants as paints, paint thinners and solvents, oil, grease and kerosene, creosote and other wood-preservatives, and the glass wool used for insulation. Nine cases of oak poisoning were reported in wood-construction yards. Preventive measures include the use of gloves, face shields, protective creams, adequate leg protection and insistance on thorough washing after working.

I.L.O. study on post-war economic policy

Just before the Twenty-sixth Session of the International Labour Conference held in April and May, the International Labour Office published a study entitled *World Economic Development—Effects on Advanced Industrial Countries* (Studies and Reports [Economic Conditions] No. 36). Starting with the ideal of "freedom from want" for "all men in all lands" propounded in the Atlantic Charter, the study is an attempt to discover how this ideal may be realized. Though it is admitted that freedom from want is "a very elastic goal" since new wants are discovered as the standard of living rises, it is nevertheless maintained that at least the following are required under modern conditions: "enough food of the right kinds to maintain vigorous health, adequate clothing for comfort and cleanliness, houses safe and pleasant to live in, health care, and at least elementary education for all". The only way in which this minimum can be achieved is through vastly increased production, for though it may appear to those living in the wealthier economies that all that is required is a more even distribution of the fruits of existing production, yet that does not take into account the enormous unfilled material wants of the great majority of the world's people.

Production can be increased sufficiently only by the large-scale economic development of new areas, and this can be realized best by co-operation between the areas which are already industrialized and the at-present undeveloped countries. Large-scale investment by the wealthy countries in the undeveloped areas will be mutually beneficial. To the latter it will mean more rapid economic progress than would otherwise be possible. To the former it will provide an outlet for the tendency towards excess saving which is almost bound to

develop and which, without an outlet, will produce economic depression. Moreover, progress in the undeveloped countries will mean increased markets for the industrial areas.

The danger to the wealthy areas will arise, it is believed, when the new economic areas have reached the point where they can compete successfully in lines of production which are at present the preserve of the existing industrial countries. The remedy, however, is not for these countries to attempt to protect their industries by cutting off investments in the undeveloped areas and by imposing high tariffs. Such a policy will only retard and will not prevent the development of new areas and, by limiting world production and world trade, it will have the effect of limiting wealth not merely in the new countries but in the wealthy countries themselves. The International Labour Office considers that the true solution lies in a policy of intelligent adaptation. As, under changing conditions, one line of production becomes economically unsound in a particular country, resources should be shifted systematically to lines in which a competitive advantage can be maintained. Such a policy, if adopted in all countries in conjunction with multi-lateral international trade, would result in world-wide economic specialization, and this would mean maximum production and thus maximum material wealth in all countries.

Report of apprenticeship commission in Australia

Over 9,000 apprentices in 18 different trades were under the supervision of the Apprenticeship Commission of Victoria in 1943, according to the fifteenth annual report of the Commission. In the engineering industry, which accounted for one-third of the total, the number has trebled over the last five years. The printing and electrical trades had over 900 each and the remainder were distributed over the other trades, subject to the Apprenticeship Act of 1928. These are construction, hairdressing, sheet metal, motor mechanics, boot manufacturing, boilermaking, butchering, baking and cooking. The figures include 2,100 apprentices whose indentures have been suspended while they are serving in the Armed Forces.

The Apprenticeship Commission consists of two representatives each of employers' and workers' organizations and an independent president. Its function is to promote and supervise apprenticeship with the assistance of joint trade committees which it may appoint for the various trades to which the Act has been extended. It may also appoint advisory committees on apprenticeship problems in rural areas. All members of the Commission and the committees except the president serve without remuneration.

During the year ending June 30, 1943, 2,550 applications for apprenticeship were approved by the Commission. Over 1,700 applicants came from junior and senior technical schools, 350 from high schools and 480 from primary schools. The Commission has power to prescribe minimum educational qualifications and ages for apprentices entering the various trades which it supervises. For most trades the minimum age is 15. The required educational qualifications vary from trade to trade but if an applicant shows that he lacked opportunity to obtain the necessary qualifications the Commission may waive them. It approved 85 applications of this type in 1943.

Over 5,000 apprentices were reported in attendance at technical schools during the year. It is compulsory for all apprentices to take prescribed technical school courses for two of the first three years of apprenticeship. Employers must allow them four hours a week off for this purpose. In addition, four hours a week at evening school are also required in most trades over a period of four to five years. During the war the extension of working hours and the introduction of shift work have prevented many apprentices from attending the prescribed 80 per cent of classes. The Commission attributed the satisfactory standing attained by most apprentices in the school examinations to its insistence on preparatory educational standards "as a suitable foundation for the intensive part-time courses prescribed". It reported that the lack of a sufficient number of trained supervising officers prevented it from properly supervising workshop training and enforcing the compulsory school attendance provisions of the Act.

The Commission prepares and distributes through the Education Department pamphlets describing the opportunities and conditions in each trade. It recommended that one authority should be made responsible for organizing a vocational guidance bureau, placement work and research into employment opportunities.

Hon. J. André Doucét, Minister of Health and Labour is Chairman of the New Brunswick Wartime Labour Relations Board. The other members are: C. J. A. Hughes, Vice-Chairman, (who is also Vice-Chairman of the Regional War Labour Board); G. R. Melvin, Secretary-Treasurer of the New Brunswick Federation of Labour; R. F. Gould, Executive Board Member of the Canadian Brotherhood of Railway Employees and other Transport workers; R. W. Cameron and C. A. Beatteay of the Snowflake Lime Co. The latter two will represent the point of view of employers.

Manpower

Extension of Manpower Controls

Minister of Labour Announces Measures to Combat General Shortages of Labour

A three-fold plan to meet manpower shortages in Canada was announced by the Honourable Humphrey Mitchell, Minister of Labour, in a radio address on June 8. Pointing out that the general shortages of labour were threatening war production, and that the Armed Forces required a constant stream of additional men, the Minister outlined the measures proposed to meet the situation as follows:

(1) Some 500,000 men who have been rejected for service in the Armed Forces will be interviewed individually, with a view to moving them, where necessary, to more essential employment.

(2) The Compulsory Transfer Regulations now in effect are to be extended to cover a greater number of occupations and will be applied more vigorously.

(3) The Industrial Mobilization Survey Plan will be extended to cover all industries, with the exception of agriculture. Men on postponement will be called for military training where possible; and the employment of other men aged 16 to 40 will be surveyed with a view to meeting the needs of essential industries.

The Minister further declared that women who are without family responsibilities would be called upon still further to engage in industry, either full time or part time.

As a measure whereby industrial management might try to help itself, the Minister strongly recommended the establishment of labour-management production committees.

The text of the Minister's speech is as follows:—

Text of Minister's Address

I am grateful to the C.B.C. for the opportunity of speaking this evening on a subject of foremost importance to the people of Canada in these critical times—namely manpower.

The invasion of Europe has commenced. Let us not under-estimate the power of the enemy. Much hard fighting lies ahead before victory is achieved.

The greater sacrifices which our men fighting on sea, land, and in the air will now be called upon to make underline the grim necessity of our civilian population backing them up in every practical way; seeing that they have the guns, shells, tanks, planes, ships, food, and everything else they need.

We on the home-front have worked hard for years to make the invasion possible. Now that it has begun, we must redouble our efforts. Standing in the shadow of this great moment of the war, we must re-dedicate ourselves to the task of production.

To-day Canada is faced with general shortages of workers, a situation that is threatening production. War industries, the farmer, essential civilian services—all are crying for help. Ways and means must be found to meet production schedules.

Labour shortages, after four years of war, are not at all surprising. They are both the evidence and the result of the completeness of our war effort.

Actually, if we had labour surpluses at a moment as tense as this we should deserve criticism; for they would show that we had failed to organize to make full use of our manpower in this gigantic struggle.

Failure, however, to adopt measures to overcome the shortages as far as possible, would be just reason for censure.

Labour Supply Position

Our labour supply position is indicated by the unfilled vacancies now listed with Employment and Selective Service Offices across the country. Toward the end of May nearly 100,000 men were required for high priority industries, as well as 41,000 women. Also, 55,000 persons were being sought by industries

in lower priorities, some of which are essential services.

To name the industries short of workers would mean listing all essential lines of employment. Shell filling plants must have 10,000 workers—mostly women—within the next few months. Railways, base metal mines, packing plants, foundries, and agricultural implement factories are all in urgent need of help.

The Armed Forces require a constant stream of additional men.

Agriculture will need anywhere up to a quarter million men and women for summer and fall work.

Our labour shortages can easily be explained. Last December 57·3 per cent of our population 14 years of age and over were in the Armed Forces or in gainful employment —and this figure has increased in the last six months. In spite of the enlistment of over three-quarters of a million men and women in our Armed Forces, from the beginning of the war to last December we increased our working population by more than half a million persons.

Actually, the figure of 57·3 per cent gainfully employed or in the Armed Forces does not tell the whole story. For instance, women on the farm are not included, but in numerous cases they have helped to meet labour shortages on the land. Large numbers of housewives in all communities, rural and urban, have done much through voluntary effort or part-time work.

Sources of Manpower

The question which now arises is—from what sources can personnel for the Forces and workers for essential industry be obtained?

As far as the Forces are concerned, most of the men needed will have to be withdrawn from industry. This means replacements will have to be arranged.

On the civilian side, we will have to call still further for women who are without family responsibilities, to engage in industry, either full-time or part-time. We can use thousands for part-time work. Some of the needs can be met through a more general use of women in many branches of industrial work.

The transfer of workers from plant to plant and place to place will have to be developed further. The services of conscientious objectors and prisoners of war will be necessary. Many other steps will also be utilized to the full.

Only by major readjustments within industry itself, by placing to better advantage those already working in industry, will we be able to overcome shortages.

Over a year ago Selective Service began a system of industrial surveys, checking on men of military age, who were on postponement of military training and who could be replaced or spared by industry, without essential production suffering.

Also last year, men of military age in certain lower priority occupations were made liable for compulsory transfer to more essential work.

Summary of Plan

At this time we are making a concerted effort to meet both military and high priority civilian needs for manpower. Our plan is threefold:—

First, some 500,000 men who have been rejected for service in the Armed Forces will be interviewed individually, with a view to moving them, where necessary, to more essential employment.

I might add that in order to speed up this plan, arrangements have been made for Selective Service and Employment Offices throughout Canada to stay open when necessary during evenings.

Second, the Compulsory Transfer Regulations now in effect are to be extended to cover a greater number of occupations and will be applied more vigorously.

Third, the Industrial Mobilization Survey plan will be extended to cover all industries, regardless of priority. The employment of all men aged 16 to 40 inclusive, in all industrial and commercial establishments will be subject to survey.

These surveys will be made as rapidly as possible. Their primary purpose is:—

> To determine cases where men on postponement can be called for military training without interfering with essential production;
> to arrange transfer to more essential jobs of men who are medically unfit or not callable for military service for any reasons;
> to discover cases where an employer, in any priority, has a temporary or permanent surplus of men in the age groups mentioned who may be moved to essential work.

In view of its peculiar labour difficuties, the agricultural industry will not be included in the survey. I might add that a survey of this nature is being applied to the Civil Service in Ottawa.[1]

I would stress the point that in regard to men in the age groups mentioned, whether callable for military training or not, or whether married or single, all cases will be examined most carefully. Essential and non-essential industries will all be covered.

Every effort will be made to treat fairly the employers and employees involved—but

[1] See page 710.

the paramount importance of war production will be the deciding factor.

To explain further: the officers of the Industrial Mobilization Survey Division of Selective Service will investigate plants, and will report to one of the twelve Industrial Mobilization Survey Committees across Canada.

Workers transferred have the right to reinstatement in former jobs, after the emergency passes.

Under certain conditions, special allowances will be paid to those moved to other jobs where hardship would be involved.

Employers and employees may appeal decisions of these Committees to Courts of Referees, which are widely distributed throughout the country and which include representatives of labour and employers.

The plan I have outlined will be put into effect immediately.

In a democracy compulsion of this sort is acceptable only in an emergency threatening the safety of the State. We are in such an emergency now—these measures are necessary to meet the situation.

Labour-Management Co-operation

This plan has been approved by the National Selective Service Advisory Board—on which labour, employers' organizations, farmers and other interests are represented. I am confident, therefore, it will receive general public approval.

Apart from what the Government can do, industrial management must try to help itself. One course I would strongly recommend is the establishment of labour-management production committees. By the co-operation of the two partners in industry much can be done in the way of increasing production with existing working force. This has been true in other countries. Canadian labour and management can surely do as well, if not better.

We have reached a period in this war when all of us must pull together as never before. More self-reliance by employers and employees; more co-operation with the government; fullest support by all citizens of what we are trying to do.

That is the need of this hour.

Recent Manpower Control Measures

Increased Enforcement of National Selective Service Civilian Regulations

PRIOR to the announcement by the Minister of Labour of plans to meet the manpower needs of the Armed Forces and of industry (see p. 708) measures taken to expedite the functioning of the Government's manpower program during the month of May included the extension of the industrial mobilization survey; changes in the regulations governing the payment of supplementary allowances to transferred workers; and an amendment to the "freezing" regulations. It was announced that manpower controls are being more strictly enforced, with the public having had time to become familiar with them, and that an increasing number of convictions have been secured in the case of employers and employees contravening the National Selective Service Civilian Regulations.

Industrial Mobilization Survey to Cover Male Civil Servants

The extension of the industrial mobilization survey plan to cover the Dominion Government Service was authorized by a recent Order in Council (P.C. 3874, May 23).

For upwards of a year industrial mobilization surveys have been conducted in private industry under the supervision of National Selective Service. Their purpose is to determine whether physically fit men who come in the age groups designated under Mobilization Regulations, and who are on postponement from military training, can be spared from their civilian employment to undertake military duties.

It has been decided to appoint a committee, "The Civil Service Mobilization Committee (Ottawa)" to carry out the survey in the Ottawa area under the direction of the Minister of Labour.

The Committee is to consist of senior civil servants, one of whom is to be appointed by the Minister of the Department undergoing a survey. The committee is to recommend a plan for the orderly withdrawal of all replaceable physically fit men in the designated classes on postponement, for service in the Army, "where such withdrawal is consistent with the efficient selection and utilization of manpower in the national interest".

The Minister is further authorized to set up similar committees to cover the public service outside of the Ottawa area.

Supplementary Allowances for Transferred Workers

The National Selective Service Civilian Regulations (P.C. 246) provide for the pay-

ment, under circumstances authorized by the Director of National Selective Service, of supplementary allowances for persons directed to new employment. These allowances may cover transportation and some other expenses.

In certain cases a separation allowance may be paid, where the worker has dependents who are remaining at home and he thus has to maintain two establishments; and in other cases transportation of the worker's dependents and household effects may be paid. Where the new employment is at a lower rate of remuneration than the worker previously received he may be paid a wage differential allowance.

A recent Order in Council (P.C. 2454, May 26) amends the section of the Regulations dealing with supplementary allowances. The main changes are to raise from $5 to $7.50 a week the maximum amount of separation allowance that may be paid; and to specify that the amount that may be paid in lieu of wages while travelling or awaiting referral shall be at the rate of forty cents per hour on the basis of an eight-hour day and six-day week.

Supplementary allowances provided by Section 212 of the Regulations are payable in specific instances only after payment has been authorized by the Director of National Selective Service. In the case of workers transferred under Compulsory Transfer Orders on or after May 30, 1944, payment of certain of the allowances has now been authorized. Allowances have also been authorized in the case of workers accepting direction to certain essential industries where the man-power shortage is especially acute.

The text of the amended section is as follows:—

212. (1) Where a Selective Service Officer has directed or requested a person to take employment and deems it necessary for the efficient placement of workers he may, in accordance with principles and directions set out in instructions given by the Director

(*a*) advance such person an amount not exceeding his necessary travelling expenses from the place where he was requested to take the employment to the place of employment;

(*b*) advance such person an amount not exceeding his necessary travelling expenses from the place of employment to the place where he was when he was requested to take the employment or to a place equidistant from the employment;

(*c*) if, in his opinion, it is necessary to move such person's dependents, advance him an amount not exceeding the necessary travelling expenses for his dependents and other necessary expenses arising out of his change of residence;

(*d*) pay him at the rate of forty cents per hour on the basis of an eight-hour day and six-day week during the period necessarily spent travelling to the place of employment or during any period when he is requested to hold himself available for referral to employment; and

(*e*) advance such a person an amount not exceeding the necessary travelling expenses for his dependents and other necessary expenses arising out of his change of residence, from the place of employment to the place where he was when he was requested to take the employment or to a place equidistant from the employment.

(2) A person to whom an advance or payment is made under paragraphs (*a*) or (*c*) of subsection (1) of this section shall repay the amount thereof to the Crown upon demand but he shall be deemed to have repaid to the Crown in respect of such advance five dollars for each week during which he remains in the employment which he accepted on the direction or at the request of the Selective Service Officer; or if he remains in the employment for the period which he was, pursuant to this part, directed or requested to remain, or if, for reasons beyond his control, he does not enter or remain in the employment which he was directed or requested to take, he shall be deemed to have repaid the full amount of the advance.

(3) Where a Selective Service Officer directs or requests a person to take employment which involves a change of residence and requires him to be separated from his dependents, and the earnings from the employment are not, in the opinion of the Selective Service Officer, sufficient to compensate him for the increased cost of living occasioned by the separation, the Selective Service Officer may, in accordance with principles and directions set out in instructions from the Director, pay him a supplementary living allowance not exceeding seven dollars and fifty cents for each week he is in such employment.

(4) Where a Selective Service Officer has, under this part, directed or requested a person to take employment at a rate lower than his usual rate of remuneration, the Director may pay him, or authorize the employer notwithstanding the Wartime Wages Control Order to pay him, a supplementary allowance not exceeding five dollars for each week he remains in the employment.

(5) Where a Selective Service Officer directs or requests a person to take employment, he may, in accordance with principles and directions set out in instructions given by the Director

(*a*) advance him an amount not exceeding fifteen dollars to defray living expenses during the first week of employment, and the person to whom such advance is made shall repay the amount thereof to the Selective Service Officer within forty-eight hours from receiving his first wages or salary from the employment or within such further period as the Selective Service Officer may allow;

(*b*) advance him an amount not exceeding his necessary expenses for work clothing, and the person to whom such an advance is made shall repay the amount thereof to the Selective Service Officer within forty-eight hours from receiving his first wages or salary from the employment or within such further period as the Selective Service Officer may allow.

(6) Payments under subsections three and four of this section may be made to the person to whom the supplementary allowance is granted or to his employer on his behalf; and where any such payment is made to an employer, the em-

ployer shall pay it to the person to whom the supplementary allowance is granted within one month from the receipt thereof.

(7) Where an advance is made under subsection one of this section for travelling expenses, the Selective Service Officer may pay the amount thereof or any part thereof to a transportation company in payment of transportation for the person to whom the advance is made.

The same Order in Council amends Section 210 A (8) of the Regulations to provide that supplementary allowances paid to ex-coal mine workers shall be in accordance with the provisions of Section 212.

Employment Permits for Longshoremen

P.C. 2675 of April 13, is intended to regularize employment conditions in certain classes of occupation wherein workers sometimes change their employer frequently although remaining within the same industry. It provides that for such employment as the Director of Selective Service may specify, permit cards may be issued to workers authorizing them to seek, enter or terminate jobs within the employment specified for the period of time and for the place or places specified on the permit, without the necessity of a permit to or notice of separation from each individual job.

The first type of employment that has been so specified by the Director is longshoremen's work. (National Selective Service Director's Order No. 16.)

Amendment in "Freezing" Regulations

Since September, 1943, employees in essential industry have been "frozen" in their jobs.* It has been necessary for an employer to obtain permission in writing from a Selective Service Officer before giving notice of separation to an employee; and similarly an employee has been obliged to obtain permission in writing before giving notice to an employer.

This regulation has now been modified. Instead of requiring permission to "give notice of separation" to an employee, an employer now requires permission to "terminate the employment of an employee or lay him off". In the same way an employee need not obtain permission in order to "give notice of separation" to his employer, but must obtain permission in order to "terminate his employment".

The charge is effected by Order in Council P.C. 3438, May 8, which amends Subsection 4 of Section 202A of the National Selective Service Civilian Regulation (P.C. 246). There were certain difficulties in the enforcement of the original Section 202A which have been removed by the amendment.

The order applies to all "A" or "B" priority industries or other "designated establishments." Local offices have been instructed to investigate all instances of illegal separation from employment in designated establishments and report them to the District Enforcement Officer.

Enforcement of Regulations

Contravention of National Selective Service Civilian Regulations by employers and employees is resulting in an increasing number of convictions, according to a statement made recently by A. MacNamara, Director of National Selective Service.

From July, 1943, to May 1, 1944, more than 18,500 reports of infractions of employment controls were investigated by district and regional enforcement officers. Of the 750 prosecutions recorded, 113 charges laid against employers have resulted in 71 convictions. Employee prosecutions total 375, with 200 convictions. Hearings are still pending in a majority of the remaining prosecutions.

In January of this year, convictions totalled 21. This figure increased to 40 in February and 52 in March, and dropped to 50 in April. Fines ranging up to the maximum penalty of $300 have been imposed by magistrates, and in a few extreme cases consistent violators have been sentenced to serve short jail terms.

Employers were most frequently charged with hiring a person who had no work permit from the local Selective Service officer. Other cases included retaining a worker in employment without a permit, dismissal without proper notice, soliciting labour, and publishing advertisements without permission to do so.

The most frequent employee offense was that of failing to apply for and accept suitable employment when directed to do so. Many persons were charged with leaving a job without giving the required 7 days' written notice. A number of workers were prosecuted for leaving a job, or ceasing to perform duties, within six months of employment, after having been directed to such employment by a Selective Service officer.

Employees were also prosecuted for: leaving a job without giving proper notice; entering employment without a permit; unauthorized leaving of employment in certain designated industries; failure to report to Selective Service for an interview when directed to do so; and alteration or mutilation of Selective Service forms.

Officials state that in recent months prosecutions have increased because violations are

* L.G., Oct., 1943, p. 1333.

being more closely followed up. For example, all Employment and Selective Service offices have been instructed to report cases of illegal separation—i.e., termination of employment in high priority industries, by either employee or employer, without written permission from Selective Service—to the District Enforcement officer. Regulations are to be more strictly enforced, now that the public has had time to become familiar with them.

"Generally speaking, however," Mr. MacNamara stated, "we feel that the public—both employers and employees—are doing their best to co-operate with Selective Service regulations. This has been proven by the small number of prosecutions that have been necessary to date."

To March 31, Courts of Referees handled a total of 2,573 appeals lodged by employers or employees who were not satisfied with local Selective Service rulings on their cases. The appeal was allowed in 776 hearings, 207 were conditionally allowed, 1,353 were disallowed, and the balance are either pending or have been withdrawn.

Female Workers Authorized for Fluorspar Mining

Authority to utilize female labour at certain surface occupations by the Millwood Fluorspar Mines Limited, at Madoc, Ontario, is granted by Order in Council P.C. 4176, May 30.

In order to meet the serious shortage of male workers and maintain the essential production of fluorspar, the employment of women at suitable jobs to be determined by the Minister of Labour has been approved.

Facilities for safeguarding the health and welfare of women so employed may be prescribed by the federal Department of Labour after consultation with the provincial Ministers of Mines and of Labour, according to the Order.

Farm Labour Program, 1944

ALL nine provinces have signed agreements with the Dominion for the current fiscal year, dealing with the joint Dominion-Provincial farm labour program. The purpose of these agreements is to provide the provinces with financial assistance in recruiting, placing and transporting workers for the agricultural industry. Expenditures under the joint program are shared equally by the Dominion and the provinces.

The agreements with the provinces this year will provide a scheme comparable to that of last year, under which the Dominion and the provinces shared jointly the cost of special efforts in locating and moving farm workers.

Maximum sums to be provided for this year's operations are as follows: British Columbia, $60,000; Alberta, $60,000; Saskatchewan, $90,000; Manitoba, $40,000; Ontario, $180,000; Quebec, $50,000; New Brunswick, $15,000; Nova Scotia, $20,000; and Prince Edward Island, $8,000.

In addition to the money made available to the provinces for special efforts in connection with the farm program, a sum of $300,000 has been provided by Order in Council, to meet the cost of interprovincial transfers of farm labour found to be necessary: these will be paid for wholly by the Dominion.

A draft text of the Dominion-Provincial agreements is annexed to Order in Council P.C. 3492, May 12, which authorizes the Dominion Minister of Labour to enter into agreements with the provinces for the current year.

Twenty-Sixth Session of the International Labour Conference

Decisions Reached by Delegates from 41 Countries on Employment Problems, Social Security, and Post-War Reconstruction

THE International Labour Conference, meeting at Philadelphia between April 20 and May 12, gave consideration to the problems of employment, social security and reconstruction that will arise as the war draws to a close, and to the future policy and program of the International Labour Organization and its status in the developing framework of post-war world organization.

Delegates representing governments, employers and workers from 41 member states, including most of the United Nations and a few neutral countries, were in attendence at this, the first regular session of the Conference since the outbreak of the war, and the twenty-sixth in the series of meetings which had formerly been held annually at Geneva, Switzerland. Canada was strongly represented, and her delegates took an active part in the proceedings of the Conference.

As a supplement to this month's LABOUR GAZETTE, the official Report of the Canadian Government delegates is being printed, together with the text of the Recommendations and Resolutions adopted by the Conference. The following is a brief outline of Conference procedure and of the achievements of the twenty-sixth session.

Conference Procedure

Each Member State is entitled to send four delegates to the Conference, of whom two must be government delegates and the other two must represent respectively employers and workers. Each delegate may be accompanied by advisers who may not speak or vote except as authorized substitutes for the delegate.

The decisions of the Conference are not binding on the Governments of Member States. They may take the form of draft international Conventions or Recommendations, which are submitted to the Member States for consideration, and which each country is obligated to bring before the "authority or authorities within whose competence the matter lies, for the enactment of legislation or other action," within 18 months at most after the closing of the Conference.

Work of the Conference

At the Philadelphia session the decisions of the Conference were embodied in the form of seven Recommendations for consideration by governments of Member States, and a number of Resolutions. An important feature of the Conference was its adoption in the form of a Declaration of the set of principles which has become known as the Philadelphia Charter.

Philadelphia Charter.—The Philadelphia Charter is a restatement, in the light of the changing world situation, of the aims and purposes of the I.L.O. Pointing out that "lasting peace can be established only if it is based on social justice," and that "poverty anywhere constitutes a danger to prosperity everywhere," the Declaration asserts the solemn obligation of the I.L.O. to further among the nations of the world programs which will achieve full employment and the raising of standards of living, social security, protection for the life and health of workers, effective recognition of the right of collective bargaining, equality of educational and vocational opportunity, and other basic objectives. The I.L.O. has also the responsibility, in the words of the Declaration, "to examine and consider all international economic and financial policies" in the light of their contribution to human well-being, and to make appropriate recommendations.

Employment.—Three Recommendations were passed by the Conference having to do with employment. (These Recommendations emanated from a special committee of the Conference, whose chairman was Mr. Paul Martin, Canadian Government Delegate.) The first deals in detail with effective governmental organization for aiding workers in finding suitable employment and for enabling employers to find workers during the period of transition from war to peace. Among the points covered in the Recommendation are the collection in advance of information concerning manpower and employment trends; demobilization of the Armed Forces; industrial reconversion; use of the employment service; vocational guidance; training programs; mobility of labour; and employment of juveniles, women, and disabled persons. The second Recommendation deals with the functions of the employment service in a long-term full employment program; and the third, which relates to the national planning of public works, urges the preparation by Member States of long-term development programs which can be accelerated or slowed down according as employment throughout the country is at low or high levels.

These three Recommendations were adopted by votes respectively of 102-0, 100-0, and 102-0, with the Canadian delegates all voting for their adoption.

Social Security.—A comprehensive plan of social security measures similar in principle to the Beveridge and Marsh plans is outlined in the Income Security Recommenda-

tion. The Recommendation makes detailed proposals for a compulsory social insurance program to embrace "all contingencies in which an insured person is prevented from earning his living," and for a supplementary system of social assistance, which would include a scheme of family allowances. The Recommendation was adopted by 92 votes to 4, with six delegates abstaining from voting. The Canadian government and workers' delegates voted for and the employers' delegate against the plan.

Proposals to the effect that public authorities should assume responsibility for extending full and complete medical care to all members of the community form the subject of another detailed Recommendation, adopted by a vote of 76 to 6, with 23 abstentions. Two alternative techniques are offered for putting the plan into application: coverage through a health insurance scheme; and coverage through a public medical care service, with funds raised by a special progressive tax, or from general revenue. The Canadian government and workers' delegates voted in favour of this Recommendation, and the employers' delegate against it.

A third social security Recommendation, adopted by 100-0, aims at providing income security and medical care for persons discharged from the armed forces and assimilated services and from war employment.

Dependent Territories.—The final Recommendation passed by the Conference deals with minimum standards of social policy in dependent territories.

Future Policy, Program and Status of the I.L.O.—The Conference had on its agenda questions as to the future status of the I.L.O. in relation to other international organizations (such as UNNRA and the United Nations Food Commission), and a variety of other matters relating to the future policy and constitutional development of the I.L.O. It was considered that many of these questions could not be decided at the present session, and in order that they should not be allowed to lapse unsettled, the Canadian and United States government delegates with unanimous support brought forward jointly a Resolution to establish machinery to deal with the questions between Conferences, in some cases through the Governing Body of the I.L.O., in other cases through a special continuing committee.

Federal States.—Among the matters referred to this Committee was a resolution brought forward by the Canadian workers' delegate, Mr. Percy R. Bengough, making suggestions for action on draft Conventions and Recommendations in federal countries, where the central government (as in Canada) does not have full authority over labour matters.

Recommendations to the United Nations.—Two important Resolutions adopted by the Conference have to do with (*a*) recommendations to the United Nations as to the measures required to be taken internationally as well as nationally to ensure full employment, social security and rising standards of living; and (*b*) a draft set of social provisions for insertion in the Peace Treaties. The first of these offers a broad basis of suggestions for reconstruction planning, covering the field of international collaboration, and, on the national plane, such problems as rehabilitation, policy on government-owned war industry, continuation or relaxation of wartime controls, tax measures, financing of reconversion projects, public works projects, improvement of workers' opportunities, and other matters. The second Resolution, if concurred in by the United Nations, would bring about the insertion in the peace settlement among other things of a reaffirmation of the Philadelphia Charter and of a recognition by each signatory power of its "duty to maintain a high level of employment."

Occupied Countries.—A Declaration by the delegations of the occupied countries of Europe represented at the Conference brought sharply to the attention of the other delegates the tragic difficulties facing those countries, both now and when the time comes to attempt reconstruction. The Declaration laid stress on the intention to reconstruct free political institutions in the liberated countries. The Conference passed a Resolution expressing "the conviction that the heroic resistance of the occupied countries is one of the essential factors in the struggle of the United Nations against the common enemy," and the desire to help promote the recovery of these countries.

Statement by Canadian Government Delegate

In a speech delivered at the annual meeting of the League of Nations Society in Montreal on May 26, Mr. Paul Martin summed up the achievements of the Conference. "Agreement was reached," he declared, "on principles which a quarter of a century ago would have been labelled as revolutionary—labelled by beneficiaries of privileges as political, economic and social disaster." Praising the tripartite structure of the I.L.O., he said: "It was impressive to see representatives of Governments, workers and employers in common assembly discussing objectively in the common interest problems of domestic and international concern." The I.L.O., he considered, was a practical example of the way in which the three partners in industry are capable of co-operating and working together. "I would hope," he continued, "that we might in Canada recognize more fully in practice the advantages of this tripartite arrangement."

Juvenile Employment Committees in Great Britain

Advisory Services for Employers and Young Workers

A JUVENILE Employment Committee or Juvenile Advisory Committee is attached to many of the employment offices in Britain with the object of facilitating the placing in suitable employment of young persons between 14 and 18 years of age. The committees also give some supervision to juveniles in the first critical years of employment when they may move from job to job with little direction or become unemployed for varying periods. A general description of the organization and work of these committees is given below.

Under the Labour Exchanges Act, 1909, the Board of Trade, which administered the Act, after consulting the Education Authorities, laid down in 1910 special rules with regard to the registration of juvenile applicants for employment. Included in these rules, as revised in 1935, were the following stipulations:

Local advisory committees for juvenile employment shall be established in such areas as the Minister of Labour may think expedient. These committees shall include persons possessing experience or knowledge of education or of other conditions affecting young persons, appointed after consulting such authorities, bodies and persons as the Minister of Labour thinks best qualified to advise him, and shall also include persons representing employers and workpeople, together with a chairman appointed by the Board.

It shall be the duty of a local advisory committee to give advice to the Minister of Labour with regard to the management of any Employment Exchange in its district in relation to juvenile applicants for employment.

Subject to these rules a local advisory committee may take steps, either by themselves or in co-operation with any other bodies or persons to give information, advice and assistance to boys and girls and their parents with respect to choice of occupation and other matters bearing upon the employment of juveniles.

The Minister of Labour may establish special advisory committees for juvenile employment to consider and advise him upon matters pertaining to the employment of boys and girls arising in any region or district he may think fit. He may also establish special advisory committees, after consultation with such educational or industrial interests as he may think expedient, to advise and assist in the placing in employment of any special class or classes of boys and girls. (Added in 1935.)

Later in 1910, the Education (Choice of Employment) Act was passed. This statute gave to local Education Authorities

power to make arrangements, subject to the approval of the Board of Education, for giving to boys and girls under 17 years of age assistance with respect to the choice of suitable employment, by means of the collection and the communication of information and the furnishing of advice.

The age limit was raised to 18 by the Education Act, 1921.

Two kinds of committees for juvenile employment developed: advisory committees for juvenile employment appointed by the Minister of Labour and juvenile employment committees appointed by the local Education Authorities. The constitution and functions of the two types are very similar. They contain representatives of the local Education Authority within whose area they operate, of teachers, of representatives of employers and workpeople in the principal local industries and other persons having a special knowledge of, or special interest in, matters concerning the welfare of boys and girls. The Minister of Labour has recommended that each committee should have at least two women members and that one-third of the committee should consist of employers and workers nominated by local employers' and workers' organizations. Members serve without remuneration for terms of two or three years.

The chief duties of the committees are: (1) to advise boys and girls and their parents, especially at the time the juvenile leaves school, on the choice of a suitable occupation; (2) to help to obtain the required employment; (3) to try to meet the demands of trade and industry for young labour; (4) to keep in touch with boys and girls during the early years of their industrial life.

An advisory committee for juvenile employment works through the juvenile department of the employment exchange to which the committee is attached, the employment officer acting as secretary to the committee. In the case of the local Education Authorities, juvenile employment bureaux have been established. Wherever there are juvenile employment bureaux, they administer unemployment insurance for juveniles.

At first, the Board of Education supervised the juvenile employment committees and the Minister of Labour was responsible only for the committees attached to the employment exchanges. But in 1927, both systems were brought under the Ministry of Labour. Both types of committees are financed by the Ministry of Labour and are required to submit annual reports to it. Officers of the Ministry may attend the meetings of any com-

mittee and inspect the work of the juvenile employment bureaux operated by Education Authorities. Problems common to all committees are studied by the National Advisory Councils for Juvenile Employment, one for England and Wales and one for Scotland. The Councils are composed of representatives of juvenile committees, employers' and workers' organizations and educational authorities.

In 1938 there were 107 local Education Authorities operating juvenile employment bureaux and committees and 200 juvenile advisory committees appointed by the Ministry of Labour were attached to its employment exchanges. In general, the Education Authorities exercise their powers in the larger urban centres with the exception of London, Bristol and Sheffield, while the juvenile advisory committees serve these cities and the smaller centres. Throughout Scotland the Ministry of Labour carries on all choice of employment work except in Edinburgh where a joint scheme has been administered by the Education Authority and the Ministry since 1911.

Work of the Committees

For the remainder of this article the term "juvenile employment committee" is used in relation to either a "juvenile advisory committee" or a "juvenile employment committee".

The greatest problem before the committees has been getting in touch with boys and girls seeking employment. In 1934 it was estimated by the National Advisory Councils that 25 per cent of juveniles between 14 and 18 obtained employment through an exchange or juvenile employment bureau and that about one-third of the boys and girls leaving school received expert individual advice on the choice of a career before taking their first job, and probably 65 per cent of the school-leavers obtained official advice, individually or collectively, in selecting an occupation or obtaining employment.

In 1934 unemployment insurance was extended to cover juveniles under 16 and over the statutory school-leaving age. Under the Unemployment Insurance Act young persons between 14 and 18 must report at an employment exchange or bureau to obtain or exchange their insurance books and to apply for benefit. They are thus brought into touch with the committees as soon as they enter insurable employment. Another means of contact is through voluntary organizations which cooperate with the committees by directing their juvenile members to seek the advice of the committees on problems of employment.

War conditions have also brought a larger proportion of juveniles to the employment exchanges. In peacetime there is no compulsion on young persons to obtain jobs through an employment exchange. Since the war, under the Essential Work Orders and the Undertakings (Restriction on Engagement) Order, the volume of juvenile labour passing through the exchanges has greatly increased.

Each committee devises its own methods. Most committees get in touch with children about to leave school by means of a school conference. This is held near the end of the term and parents are invited to attend. Addresses are given by members of the committees and by employers and workers from the local industries to acquaint parents and pupils with the fields of employment open in the area, to point out the factors which should be considered in choosing a job and to urge them to use the facilities of the employment offices. Often films on industrial life are shown and pamphlets distributed describing employment opportunities in the local trades. Tours of local plants may be arranged. In addition, most committees have the schools fill out report cards on all pupils leaving school so that they will have on file information on the educational record of each child, his capabilities, character and vocational plans if any. If reports are also obtained from the school medical officer, the committees can consider the fitness of the child for various types of employment.

Children and their parents who indicate at the school conference or on the report cards that they wish individual advice are invited to attend for interviews either at the school or at the employment office. Members of the committees take turns in sitting on the interviewing sub-committees and may be assisted by teachers, employers, workers or other persons not on the juvenile committees. If possible each interviewing sub-committee includes at least one employer and worker. Holding the interviews at the school has the advantage of placing the child in familiar surroundings, facilitating attendance and securing the co-operation of school officials who know the child. On the other hand, those who are interviewed at an employment office become acquainted with its facilities from the outset and are more likely to return to it for help when changing jobs. Interviewing committees may sit in the evening when parents can attend.

In order to give useful vocational guidance, committees must have full information regarding both the young person seeking advice and the local employment field. For many juveniles they have school reports on file. For others they must obtain the information from the child, his parents, teachers, employers and other persons who know him.

Some committees of local Education Authorities in co-operation with the National Institute for Industrial Psychology have experimented in the use of psychological tests to estimate the capacities of boys and girls in relation to various types of employment but the National Advisory Councils for Juvenile Employment in their 1934 report stated that

> Psychological tests alone cannot in our view afford a sufficient basis for giving advice to the individual upon choice of career.

Knowledge of local industry is usually obtained through surveys and personal visits to employers. Some committees prepare booklets or leaflets on local trades such as the "Guide to Employment for London Boys and Girls".

The advice given depends on the individual's needs. If the committee considers that the child would benefit from further education and his parents are not in urgent need of his earnings, he is advised to continue at school, and courses of study may be suggested which will lead to a suitable career. If the child is to take employment, the committee endeavours to guide him into an expanding trade with opportunities for training and promotion and into an occupation suited to his capacities and inclinations. Wherever possible committees advise boys and girls to enter industry as apprentices or learners.

Committees assist juveniles to obtain suitable jobs through the employment exchanges. The British Ministry of Labour in a recent memorandum to employment officers declared that

> No employment can be regarded as really satisfactory for the young unless the management is actively conscious of its responsibility for the future of the boys and girls whom it employs.

Unfortunately a number of factors may militate against satisfactory placings. Often the child's parents cannot afford, or think they cannot afford, to let him take an apprenticeship or job with good prospects for the future when higher earnings may be obtained immediately in less desirable jobs. Many young persons and their parents are prejudiced against certain occupations such as domestic service or coal mining. Employers with the best openings may recruit privately so that the employment offices do not have satisfactory vacancies to offer. Committees can attempt to remedy this situation by pointing out to employers the advantages of hiring young workers through an employment office and by urging those with satisfactory openings to employ a larger proportion of juveniles. They can also try to improve conditions of work so that unsuitable jobs become more satisfactory and to overcome prejudices against certain types of employment. In large centres a fair distribution of suitable vacancies among employment offices can be arranged by means of a clearing-house.

In most places the number of satisfactory openings may be insufficient to meet the demand and committees will be forced to offer less suitable jobs to many young persons or to offer none. In an early handbook for juvenile advisory committees, it was observed:

> The point of importance is not whether vacancies of the less satisfactory kind shall be filled or not filled—they will be filled in any case—but whether they shall be filled with the knowledge or without the knowledge of the Labour Exchange . . . It is best that they should be filled with the knowledge and under the supervision of the advisory committees.

However, the latter should point out to the young person and if possible to his parents the reasons why a particular job is not satisfactory and should impress upon the juvenile that such a job is to be regarded as a temporary expedient only.

Follow-Up Work

Moreover, by careful follow-up work juvenile employment committees can mitigate some of the evils of blind-alley or unsuitable employments. They can watch for more satisfactory openings to which the juveniles may be transferred. They can encourage the boys and girls to train for better positions by attending night school or persuade their employers to grant them time off for day-continuation classes. They can assist young persons to get in touch with social and recreational clubs which can sometimes compensate for the lack of stimulation and the monotony of many jobs. They may be able to influence employers to improve the conditions of work.

Follow-up of juveniles placed in satisfactory jobs is also important. As the Ministry of Labour pointed out in its circular to local education authorities engaged in choice of employment work in 1935:

> The first object of this is to ensure, on the one hand, that the child settles down contentedly in employment and makes due progress in his industrial career, and on the other that the employer is satisfied so far as possible with the quality of service given. At the same time the committee can assure itself that the general welfare of the child has not suffered by the transition from educational to industrial life. If this industrial supervision is adequately carried out, it should serve also as a valuable means of testing the suitability of employment found for juveniles and the effectiveness of the advisory and placing work of the committee.

Methods of keeping in touch with juveniles placed in employment vary. Often the boy or girl is given a card of introduction to his or

her prospective employer who is requested to mail the card back to the employment office if he hires the applicant. A member of the juvenile employment committee visits the establishment about six weeks later to see what progress is being made and whether the employer is satisfied. On this visit a canvass may also be made for other vacancies. Further visits may be necessary in the case of juveniles in unsatisfactory jobs or those who need special supervision for any reason. Occasionally, visits are made to a child's home if the parents' attitude or home conditions are hindering the child's progress or if the committee has lost touch with the child. In some areas arrangements have been made with employers of juveniles to forward periodic reports to the exchange. Sometimes a standard report form is prepared by the committee. Often the co-operation of factory doctors and welfare officers is enlisted to watch the progress of delicate or difficult children.

Young persons are urged to drop into the employment office frequently to report progress and talk over problems. If they are unable to do this, they are asked to send postcards or notes. Many committees hold "open evenings" at the offices during which juveniles and their parents may obtain further advice and assistance in problems of employment, information about apprenticeship, educational courses, emigration, etc. Sometimes written invitations are sent to recently placed juveniles and their parents or to those with whom employers have reported difficulties. Attendance at the employment office is not compulsory but the sub-committees of the juvenile employment committees which conduct supervisory interviews have been able to help a great many boys and girls discover the cause of an unsatisfactory attitude to a job and remove it before dismissal or resignation became necessary. For example, one girl reported that she did not like her work because it was dirty and soiled her clothes. At the committee's suggestion, the employer overcame this objection by supplying overalls. Supervisory sub-committees also advise young persons on the use of leisure, encourage them to continue their education and join clubs and in general act as a steadying influence on juveniles who might otherwise drift from job to job. Juveniles needing special advice or asistance are put in touch with the appropriate agencies such as health authorities, social welfare officers and education authorities.

Additional Functions

Special arrangements are made by most committees for groups of juveniles requiring slightly different treatment from the average child who takes up a job on leaving elementary school. Some appoint sub-committees to deal with secondary school pupils, mentally and physically defective children, juveniles transferred from one area to another, and so on. In many areas secondary school teachers have been added to the committees or form advisory bodies to asisst the committees. The Associations of Headmasters and Headmistresses in London have established their own juvenile employment committees for secondary school children. Advice on careers for secondary school pupils is available in a series of pamphlets published by the Ministry of Labour. Committees report that an undue proportion of children with secondary education seek "white-collar" jobs. To secure a greater variety of both vacancies and applicants, regional committees and councils have been organized by the Ministry to deal with secondary school pupils over wider areas than are covered by local employment committees.

Special care has to be exercised in advising and placing physically and mentally defective children and they usually require additional supervision. Committees seek positions for them with sympathetic employers offering exceptionally favourable conditions of work and usually enlist the co-operation of some voluntary organization to watch over the child after he has been placed and to report to the committee on his progress. They often refer such juveniles to agencies which can provide them with special training or medical assistance. The Edinburgh committee has established careers committees in special schools for handicapped children.

At first, committees were reluctant to place boys and girls away from home because juvenile wages were seldom sufficient to support a young person in lodgings and additional problems of supervision were involved. However, the lack of employment opportunities in the depressed mining areas made it necessary to begin a policy of industrial transference in 1928. Under the scheme, which was later extended to other areas with a surplus of juvenile labour, the Government provided travelling expenses, a maintenance allowance if the wages were inadequate to meet the cost of living away from home, and assistance in emergencies such as illness or temporary unemployment. No juvenile is transferred without his parents' consent. Juvenile employment committees in the depressed areas select young persons for transfer and those in the receiving areas see that suitable accommodation is available, make arrangements for receiving transferred juveniles and put them in touch with churches and social clubs. They secure the co-operation of voluntary organiza-

tions in after-care work for transferred boys and girls or set up special care committees of their own. In the 10-year period, 1928-38, over 70,000 boys and girls were transferred under the scheme.

Juvenile employment committees also concern themselves with general problems of juvenile employment. They make studies of hours or other conditions in local industries and try to persuade employers to improve them. In some areas they have attempted to decasualize certain types of employment and to control street-trading by a local licensing system requiring juveniles to obtain their licences through the committees. They are interested in the enforcement of child-labour laws and often make proposals for new legislation. Through personal contact, addresses to local societies and public meetings of parents, employers, workers and teachers they arouse community interest in problems affecting juveniles.

However, it was soon recognized that most of the problems could not be solved by individual local committees. In 1928 the two National Advisory Councils for Juvenile Employment, one for England and Wales and one for Scotland, were established to carry out nation-wide studies. They have published reports on the hours of boys and girls in unregulated trades, unemployment insurance for juveniles, junior instruction centres for unemployed youth and other related questions. Local committees assist in these studies by supplying statistics and reports on conditions in their areas. The present scheme of Approved Courses of Instruction which juvenile claimants for unemployment insurance are required to attend and which others may attend was based on a recommendation of the National Advisory Councils.

Conclusion

In 1922 about 113,000 vacancies for juveniles were filled through the local offices. In 1938 the number had risen to 500,000. In 1931, the Royal Commission on Unemployment Insurance stated: "A much larger proportion of the total number of engagements is effected through official agencies in the case of juveniles than in the case of adults."

Statistics of placings, however, cannot serve as a basis for judging the worth of the committees. As was pointed out by an officer of the Ministry of Labour before the Committee inquiring into the Work of the Employment Exchanges in 1920,

> The object of the Juvenile Employment Exchanges and Committees is not primarily to adjust the supply of labour to the demand but to direct juvenile labour in such a way that as many boys and girls as possible may be assured of a future career suited to their qualifications and in general to aim at an improvement in the existing condition of juvenile employment.

The Departmental Committee on Juvenile Education in relation to Employment after the War which reported in 1916 and 1917 was greatly impressed with the value of the committees and urged the extension of the scheme to all parts of Great Britain. The British Ministry of Labour and National Service during the present war is also looking to the committees for help in the post-war period. It has stated in a 1943 memorandum to employment offices:

> The work of Committees has made no small contribution during the past quarter of a century to strengthening the hands of the Department in the task of helping the young workers of this country. During the days of depression they did valiant work and mitigated to a considerable degree the worst ills of that time. In wartime the need of their services may be less apparent but it is there, and during the period of resettlement in the course of transition to peace conditions there will be undoubtedly many ways in which they can give advice and support.

Joint Production Machinery in Great Britain

Employers and Workers Join Forces to Increase Production

THE International Labour Office has recently published an extensive study on *British Joint Production Machinery* (Studies and Reports, Series A (Industrial Relations) No. 43).* It is the latest of a number of reports on different aspects of wartime labour supply and production problems which the Office has prepared for meetings of Canadian and United States Government officials, employers and workers. An earlier report entitled *Joint Production Committees in Great Britain* (Studies and Reports, Series A, No. 42) was presented to one of these meetings in February, 1943 (L.G., 1943, p. 306). Discussions at the meeting showed the need for a fuller report and a member of the staff of the Office therefore spent the summer of 1943 in Britain studying the machinery in action. It was found that the joint production (labour-management) committees and similar bodies in individual workshops depended for their effectiveness on joint machinery of national and regional scope and the report was therefore expanded to include a description of this machinery.

Origins

It is stated at the beginning of the report that the development during the present war of consultation between employers, workers and the Government on a national and regional basis and of employer-worker consultation in individual plants owes much to the firm belief in Great Britain "in the established processes of collective bargaining, that grow out of a long and generally satisfactory experience of organized industrial relations and a tradition of self-government of industry". The machinery with which the present report is concerned, however, is to be clearly distinguished from the background of normal collective bargaining since its purpose is not to deal with wages, hours and other conditions of work but to devise means of solving production problems including the closely related problem of labour supply.

Moreover, the movement is to be distinguished from the shop steward movement of the last war which "was partly a defensive action by the workers against innovations, and partly a constructive move to secure a place in the direction and not merely in the regulation of industry". It is also to be distinguished from the recommendations made towards the end of the last war by the Whitley Committee on Relations between Employers and Employed. This Committee proposed that workers should be given "a greater opportunity of participating in the discussions about, and adjustment of those parts of industry by which they are most affected" by means of plant, regional and national joint councils in industries where trade unions and employers' associations were already well established and that trade boards should be set up in industries where there were no collective agreements regulating conditions of work. The shop steward and joint council movements were part of the background of industrial responsibility from which the present movement stemmed. The latter, however, arose much more directly from the workers' demand for a direct part in the planning of production, and "this demand, when taken up by the national trade union movement, has led to the more integrated system of workers' committees, related on the one hand to trade union organization, and on the other to the official production organization".

The aim in establishing joint production machinery in the present war has been to contribute to the solution of the numerous technical problems which have arisen, particularly in rapidly expanding industries, to secure a better distribution of skilled workers in essential occupations and to facilitate the upgrading of workers. The machinery has developed gradually as needs changed. At first there was a highly centralized system with both departmental responsibility and employer-worker consultation concentrated at the national level. At the same time, however, a movement for joint production committees was afoot and it received a great fillip early in 1942 when two national agreements were signed to provide for the establishment of such committees in the Royal Ordnance Factories and in private munitions and metal-working plants. The development of regional and district machinery lagged until the issue in May, 1942, of the Report of the Citrine Committee on Regional Boards, but since then there has been considerable devolution of executive authority from the centre to the regions, and facilities for bringing employers and workers into the picture at the regional level have been improved. Another recommendation of the Citrine Committee is being put into effect by the steady integration of the joint production committees in individual

*May be obtained from the International Labour Office, 3480 University Street, Montreal, at $1.25 per copy.

plants with the regional and national machinery so that problems which cannot be solved in the plant may be referred to the regional and national advisory bodies.

Description of the Machinery

War production policy is ultimately determined, of course, by the War Cabinet and policy within particular fields is the responsibility of the Ministers concerned. Provision has been made, nevertheless, for securing the advice of employers' and workers' representatives at every stage in the formulation and application of both production and labour supply programs.

The Minister of Production is responsible for co-ordinating production policy and the National Production Advisory Council, comprising representatives of the national employers' and workers' organizations and the employer and worker vice-chairmen of the regional boards, advises the Minister as to the effects on industry both nationally and regionally of production policies. Parallel to the Production Advisory Council is the National Joint Advisory Council of the Minister of Labour and National Service, or perhaps rather the Joint Advisory Committee, a smaller body formed from the membership of the Council which meets much more frequently. This Committee, however, is not immediately concerned with production problems, but rather with labour supply and industrial relations policies. Advice on special aspects of production policy is given by numerous other joint consultative bodies which have been set up by the Ministers of Production and Labour and also by the various supply departments and the Minister of Fuel and Power.

In each of the eleven regions into which the country is divided there is a board consisting of the regional controller of the Ministry of Production as chairman, the regional representatives of all the departments most directly concerned and employers' and workers' representatives. This board is responsible for co-ordinating production and manpower policies in the region and thus the employer and worker representatives here perform some administrative functions. The regional boards have set up district committees consisting of the district office manager of the Ministry of Production and employers' and workers' representatives.

Joint production committees in individual plants, or labour-management committees as they are called on this continent, are sponsored by both the national trade unions and employers' associations, with the result that they are being widely accepted even though there is no obligation to establish them. It is now becoming accepted practice that questions on which the workers' and management sides cannot agree or matters such as the late arrival of raw materials which are beyond their control, will be referred to the regional boards. By their constitutions, as set forth in the agreements under which they are established, the plant committees are firmly linked with the trade union movement. They may not discuss matters which are within the scope of collective bargaining, their functions being limited to giving advice to management on problems of production and the utilization of manpower. The appendices to the I.L.O. report include extracts from the annual reports, agenda and minutes of actual committees showing some of the results achieved in various plants in improving production methods, welfare facilities, etc.

Value of the Machinery

Some consideration is given at the conclusion of the report to the value of this joint production machinery. No attempt is made to assess in detail the achievements of the various bodies which have been set up but favourable opinions from trade union, employer and Government sources are cited. The Minister of Aircraft Production said in a letter to the I.L.O. that

> In my view industrial efficiency is largely a problem of human relationships and the best way to achieve it is to seek the highest possible level of willing co-operation between the various sections of industry; that is to say, between managements, designers and workers. One of the most important methods of achieving this co-operation is the establishment of joint production committees. Through such committees workers and technicians, with their store of practical knowledge, can contribute to the smooth and efficient running of their factories, and managements can, by explaining the nature of their technical problems and difficulties, deepen the understanding, and win the confidence of their rank and file workers.

The author of the I.L.O. report suggests that a study of the British experience might be valuable for other countries and for the post-war world:—

> The details and even some of the principles of this experiment would clearly be inapplicable outside Great Britain. Nevertheless, British experience suggests some national and international parallels. For Federal countries, it suggests that wide measures of decentralization are possible without disregarding 'basic principles and methods. For other countries where industrial relations are in an initial stage, it suggests that the discussion of grievances and the negotiation of agreements are not the sole aim of industrial policy. On the international plane, it suggests that international labour legislation, negotiated by Governments, employers and workers, may be paralleled by similar collaboration in the consideration of such questions as international public works, international migration, and international problems resulting from the operation of particular industries.

Convention of Industrial Accident Prevention Associations of Ontario

ATTENDANCE at the Annual Convention of the Industrial Accident Prevention Associations as held in Toronto in April was the largest on record. More than 4,500 persons from 142 towns and cities and including representatives from five Canadian provinces and nine of the United States, were present.

Numerous administrators and other experts in the industrial accident prevention field, from both Canada and the United States, contributed to the program of addresses and discussions.

Mr. William Morrison, K.C., chairman of the Workmen's Compensation Board in Ontario, traced the development of compensation legislation in that province, from 1915 to the present time. He pointed out that over a period of years, there had been a progressive increase in benefits to injured workers or their dependents, with full hospitalization and medical attention. But, "although the accident hazard had gone up the accident cost had gone down". He suggested that this decrease in assessments was due to three things: (1) efficient accident prevention; (2) an increase in the knowledge and use of first aid; (3) the great progress made in providing medical care for injured workers.

In an outline description of the safety operations of General Motors Corporation at Detroit, Mr. H. W. Anderson, Vice-President of the company, stated: "In looking back over our safety experience, we find that our safety record is largely due to the application of six general principles . . . . . These principles are: (1) interest in safety on the part of top management; (2) a definitely established safety organization throughout the supervisory organization to each individual employee; (3) adequate and capable full-time safety personnel; (4) written safety procedure and instructions for each occupation; (5) thorough safety instruction of new employees; (6) stimulation of interest in safety on the part of every employee".

In a graphic description of the losses to the war effort resulting from industrial accidents, Dr. J. H. Couch, of the Department of Surgery, University of Toronto, stated: "Since the start of the war, we, in Canada—not the United States—but in Canada, have lost enough time due to industrial accidents to have produced eight more super battleships and—not or—50 more destroyers . . . and—not or—4,500 more medium sized bombers and 20,000 tanks. We have lost enough time to have produced those items, or their corresponding parts in other munitions."

Mr. E. E. Sparrow, Works Manager, Imperial Varnish and Colour Co., in the course of his address, referred to the "sponsor system", by which an older employee was made responsible for a certain time for the new employee, to see that he or she learned the ways of the plant. He suggested that in nearly every instance a new employee was anxious to please. There was, he said, generally a certain amount of fear of accidents and, for that reason, too often new employees were injured. For that reason, he felt that it was necessary to develop confidence in new employees coupled at the same time with a desire to do a good job.

Mr. E. D. Morgan, Canadian National Carbon Co., Limited, the newly elected President of the Association, in his address to the convention, asserted that it was his belief that accident prevention can be divided into three phases: "(1) create interest; (2) find out the facts; (3) take action based on the facts." With respect to the first point he asserted that management and workers alike must be sufficiently interested so that all will co-operate actively in any safety program that may be set up. This co-operation cannot be obtained by mere chance. The second phase, that of ascertaining the facts about accidents, their types, their nature, and their causes, not only in specific plants, but in others as well, should lead naturally into taking essential action. It was in this phase that Mr. Morgan felt the Industrial Accidents Prevention Associations could be of the most tangible assistance in preventing accidents in individual plants. He pointed out that the Associations are comprised of 17 classes of industry formed into 10 Class Safety Associations. The directors of the class associations meet several times each year to discuss accidents and types of accidents and are thus in a good position to give current service in reducing the number and preventing the recurrence of these accidents.

Mr. J. C. Macfarlane, K.C., Vice-President of the Canadian General Electric Co., stressed the need for stimulative leadership by management which should provide ample authority or directives to install safety devices and educational measures. But, he declared, it was essential that the workers must contribute their active and full co-operation, if progress was to be made.

Conditions in Aluminum Industry Reported on by Quebec Commission

AN extensive study of the conditions of work of potmen employed by the Aluminum Company of Canada in two plants at Shawinigan Falls, Quebec, has recently been made by a three-man Commission appointed by the Minister of Labour for Quebec. A dispute between the company and the workers in regard to the number of aluminum pots which each man should be required to watch led to the appointment of the Commission to determine the best arrangement of the work in the potrooms having regard to technical and human factors. The commissioners were Dr. F. J. Tourangeau, Director of Industrial Hygiene, Quebec Department of Health and Social Welfare, J. A. Isabelle, head potman at Shawinigan Falls and P. E. Radley, manager of the plants at Arvida. The Commission's report was presented on March 11 and contained a bibliography on industrial fatigue.

Study of Health and Fatigue

After making statistical studies of labour turnover, absences, illness and accidents in the potrooms, subjecting groups of workers to medical and radiological examinations and fatigue tests and having the atmospheric conditions of the potrooms tested, the Commission concluded that there was no sign of chronic industrial fatigue among the potmen and no evidence that their health was seriously affected by their conditions of work. Absence, sickness and accident rates at Shawinigan Falls were found to be generally below the rates reported for American industries of a similar nature. The absence rate was higher in the potrooms than in the other departments in five of the seven years, 1937-43, but turnover was lower in the potrooms except in 1937, 1942 and 1943. In plant No. 2, which had been put into operation in 1942, labour turnover was greater than in plant No. 1. The Commission attributed this to less rigid physical standards in the selection of workers for plant No. 2, more inexperienced employees, and the fact that the work was harder in this plant.

The records of the Relief Association of Shawinigan Falls showed that the potmen who were members appeared to have fewer illnesses than workers in other departments. The statements of 13 physicians who had practised in Shawinigan Falls also failed to establish that the potmen's health was affected by their work. Medical and radiological tests of groups of potmen revealed some signs of abnormal lung and bone conditions caused by dust and fluorine in the air of the potrooms among those with more than two years of service but none of the conditions was considered serious. The Commission considered that a large number of men would have to be examined before definite conclusions could be reached on the prevalence of these conditions among potmen.

Physiological tests for fatigue given to 32 potmen did not show any signs of chronic fatigue but did reveal that workers who used a hammer to break the crust on the pots in order to introduce ore needed more rests than those who used a machine. It was observed that all signs of fatigue disappeared in the 16 hours between shifts.

Recommendations

The Commission recommended annual medical examinations for potmen and maintenance of a high physical standard in selecting men for the work. It also urged improvement in the ventilating system at plant No. 1 and a study of the question in plant No. 2 as the atmosphere of both plants was very dusty and in plant No. 1 the concentrations of fluorine found in the air were unduly high. It recommended that efforts should be made to reduce the temperature of the potrooms in the summer. The Commission considered the lighting inadequate and proposed a minimum standard of 10 foot-candles for potrooms and 15 foot-candles under the travelling cranes.

Considering the problem of how many pots each worker could reasonably be expected to attend, the Commission observed that it had been the custom to assign seven pots to each man in summer and eight in winter. The National Catholic Syndicate of the Aluminum Industry, claimed that seven was sufficient all year round as the work was very arduous, the workers were exposed to fumes, dust, and extremes of temperature, and during the war added burdens had been placed on the older workers through the employment of many inexperienced workers of a lower physical standard. During the inquiry the number of pots assigned to each worker in plant No. 2 had been reduced to 7½ under a temporary compromise suggested by the Commission.

The Commission was of the opinion that no step should be taken in wartime which would diminish production per man unless it was proved to be desirable from a health

viewpoint. Since the investigation showed that even potmen with many years of service did not appear to be harmed by the work, it concluded that the arrangement of work at plant No. 1 was satisfactory. It recommended certain modifications in the system at plant No. 2 where the work was harder due to a different type of pot and different methods. It proposed that each man should be assigned 7½ pots and the work lightened further by reducing from three to two the number of times per shift that each worker must break the crust on the pot and by relieving potmen of responsibility for taking specimens from the pots.

The Commission observed that the aluminum industry must continue to increase its output per man-hour if it wished to compete in world markets after the war, but it considered that this could only be done by the introduction of new methods and labour-saving machinery. It recommended that in order to determine the number of pots which each man could be expected to supervise under such new conditions, a table should be drawn up showing the time required for each operation and the amount of rest needed to avoid fatigue, and the work divided accordingly. A sample table was drawn up by the Commission after securing the opinions of a number of industrial management experts on the rest periods required to obtain optimum production in various types of work. The table set out the number of minutes of rest which should be allowed for every 100 minutes of work in each operation. For example, for every 100 minutes of work in operations involving considerable physical effort and constant exposure to heat such as breaking the crust on the pot, it recommended 140 to 175 minutes of rest; for less arduous operations such as taking samples of the metal or cleaning the pots, 75 minutes; and 24 minutes for light work such as sweeping the floors.

Development of Columbia River Basin as Post-War Project

PLANS for the development of the resources of the Columbia River basin are to be studied by an international joint commission, with a view to joint action in the future by the governments of Canada and the United States. Announcement to this effect was made in the House of Commons on March 9 by the Prime Minister, Rt. Hon. W. L. Mackenzie King, who indicated that the commission was expected to report from time to time on projects which might be integrated with post-war rehabilitation plans.

The reference to the commission is being made under the terms of a Treaty of 1909 relating to boundary waters between the United States and Canada.

"The present reference," the Prime Minister declared, "concerns the entire Columbia river system. It is based on the realization that a large part of the water resources of the two countries in this important river basin is being allowed to go to waste because of lack of adequate regulation and control, and upon the desirability of more effective flood control. The investigation by the commission will cover domestic water supply and sanitation, navigation, efficient development of water power, the control of floods, the needs of irrigation, the reclamation of wet lands, the conservation of wild life and other beneficial public purposes.

"When the commission has completed its investigations there will be available to the two governments a complete and detailed report on the best uses to which the waters of this vast river basin can be put.

"The Columbia river is 1,200 miles long. In comparison, the St. Lawrence from Duluth to Father Point is 1,700 miles long. The watershed of the Columbia river is 259,000 square miles, of which 39,400 are in Canada.

"At present there is a total installed capacity of approximately 450,000 horsepower in the Columbia river basin in Canada. The studies to be undertaken by the commission will determine the total potential water power in the basin.

"The Columbia is a truly international river. Any development, and particularly any power development, of the resources of the river on one side of the boundary is certain to have an effect in the other country. For this reason it is necessary that the plans for development of the river basin in one country should be adapted to those in the other.

"It is unlikely that a complete report by the commission will be available for several years, but it is expected that the commission will bring out interim reports from time to time with regard to projects which might be integrated with post-war rehabilitation plans."

The Prime Minister explained that the commission's reports would not be binding on the governments concerned, but that "it is likely that the investigations of the commission will result in suggestions and recommendations which will be carried into effect by joint action of the two governments."

Decisions of National War Labour Board

Amendment to Wartime Wages Control Order

ON May 4, 1944, P.C. 3277 was passed amending the Wartime Wages Control Order, 1943 (P.C. 9384 of December 9, 1943, as amended by P.C. 1727 of March 13, 1943) to enable the National Board to permit:

(1) changes of time rates to rates based on other forms of calculation (such as commission or incentive rates) and vice versa:

(2) increases in rates paid to employees engaged in international train service and established pursuant to collective agreement or to a recognized practice of long standing, such increased rates to correspond with increases already made outside of Canada by collective agreement, established practice or competent authority.

The first amendment clarifies a sub-section of the Order. The second permits the National Board, in its sole discretion, to increase rates payable to occupational classifications of employees engaged in international railway train service to correspond with the rates paid to employees in similar occupational classifications in the same employer's employment outside of Canada. Such authority has given the National Board the power to adjust rates paid by certain American railroads operating railway services in Canada such as New York Central System, Père Marquette Railway Company, Wabash Railroad, Great Northern Railway, Vancouver, Victoria and Eastern Railway and Navigation Company, Nelson and Fort Sheppard Railway, and the Midland Railway of Manitoba.

Copy of a National Board's reason for decision issued in respect of an application of this nature will be contained in the next issue of the LABOUR GAZETTE.

A consolidation of the Wartime Wages Control Order, P.C. 9384, and its amendments, has recently been printed.

List of Decisions

Recently the National War Labour Board has issued decisions in the following cases:—

Victory Aircraft Limited (Malton, Ont.), and International Association of Machinists, Lodge 717.

Hayes Steel Products Limited (Merritton, Ont.), and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 676.

Halifax Power and Pulp Company, Limited (Sheet Harbour, N.S.), and International Brotherhood Pulp, Sulphite and Paper Mill Workers, Local 301.

Brosseau, Limitee (Montreal, Que.), and Le Syndicat des Employes de la Boulangerie et de la Patisserie de Montreal, Inc.

Aluminum Company of Canada, Limited, and La Federation Nationale des Employes des Industries de l'Aluminium, Inc.

Aluminum Company of Canada, Limited, and La Federation Nationale des Employes des Industries de l'Aluminium, Inc. and International Union of Aluminum Workers.

Gouin Lumber Company, Limited (Trois-Rivières, P.Q.), and United Brotherhood of Carpenters and Joiners of America, Local 2617.

J. C. Wilson Limited (Lachute, Que.), and International Brotherhood of Paper Makers, Local 437.

Bryce Bakeries Limited (Winnipeg, Man.), and Canadian Bakery Workers' Union, Local No. 1.

Dominion Bridge Company, Limited (Calgary, Alta.), and Rolling Mill Employees' Local Union No. 23180.

Oliver Co-operative Growers' Exchange (Oliver, B.C.).

Dominion Bridge Company, Limited (Toronto, Ont.), and United Steel Workers of America, Local 2808.

The Garlock Packing Company of Canada, Limited (Vancouver, B.C.).

Johnson Wire Works Limited, and International Association of Machinists, Lodge 1758.

Grover Mills, Limited (Montreal, Que.), and National Clothing Workers' Union.

S.M.T. (Eastern) Limited, and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 1229.

Sorel Steel Foundries Limited, and Le Syndicat National des Fonderies de Sorel, Inc.

Knitters, Limited (Marieville, P.Q.), and United Textile Workers of America, Local 7.

Royal Securities Corporation Limited (Montreal, Que.).

Detroit and Windsor Subway Company, and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 195.

The Skinner Company, Limited (Oshawa, Ont.), and United Automobile Workers of America, Local 222.

Ontario Steel Products Company, Limited (Chatham, Ont.), and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 127.

National Union of Operating Engineers of Canada, and Ordinance No. 6 of the Quebec Minimum Wage Commission.

Hudson's Bay Company (Vancouver, B.C.).

Re: Victory Aircraft Limited (Malton, Ontario) and International Association of Machinists, Lodge 717

Reasons for Decision

This is an application by the Union for general upward wage adjustments and double time for overtime worked after 12 hours on any one shift.

The case for revision of the wage schedule must rest upon a comparison with rates paid at the De Havilland plant near Toronto. On paper, the two schedules do not disclose much variation, at least not enough in our opinion to constitute a "gross inequality". The Union argues, however, that the real story is told not by the schedules but by the rates actually paid to the workers according to their classification. The inequality is alleged to result from the Company's unwillingness to classify some production workers as journeymen. The parties have agreed upon a set of specifications for the various classifications. The factual question then arises as to what individual workers are to fit into the higher brackets of skill and remuneration.

Generally speaking, that matter belongs to management subject to the worker's recourse to the grievance procedure of the collective agreement. Ordinarily it should be no part of the business of this Board to have to interfere. In this case, however, the Union strongly urges that upon comparison with the classifying done at De Havilland, a manifest condition of inequality prevails at Malton. On this factual condition, we have no immediate means of informing ourselves. We think the parties should get together and agree within 15 days upon a referee or investigator to examine into the situation at Malton and De Havilland and to report to the Board with recommendations. If the parties do not report agreement within the time stated, then the Board will appoint an investigator of its own.

On the matter of overtime, the Board has recently expressed its view in the case of Canadian Car & Foundry (Fort William Aircraft Division), decision dated March 16, 1944. Following that decision, this part of the application must be denied.

With respect to the adjustments agreed to tentatively and without prejudice by the Company, we think this is a matter on which any decision should be deferred until the Report of the Referee has been obtained.

May 3, 1944.

Re: Hayes Steel Products Limited (Merritton, Ontario) and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 676

Reasons for Decision

This is an appeal by the Union, by leave of the Regional Board for Ontario, concerning the effective date of a decision authorizing wage increases.

The application was made by the Union on July 26, 1943. The Regional Board did not fix the date upon which its decision of October 15, 1943, would take effect, but left it to be negotiated by the parties. The Union insisted upon the effective date being the date of its application, while the Company offered the half-way date of September 6, 1943. The Regional Board adopted the Company's compromise.

Our policy has been to refrain from interfering with a Regional Board's discretion in matters of this kind. This is a case, however, where the Board does not appear to have exercised any discretion of its own and we see no reason why the increases should not be effective from the date of application. Consequently, we shall allow the appeal.

May 3, 1944.

Re: Halifax Power and Pulp Company, Limited (Sheet Harbour, N.S.) and International Brotherhood Pulp, Sulphite and Paper Mill Workers, Local 301

Reasons for Decision

This is an application by the Union by way of appeal from a decision of the Regional Board for Nova Scotia on a joint application dated May 26, 1943, for approval of a vacation with pay plan to be effective from May 1, 1943, upon the basis of continuity of service acquired prior to that date.

The Regional Board refused the application and much later, on January 13, 1944, following the Union's request for a review of the decision, issued a direction to inaugurate a vacation plan as of January 1, 1944, based upon service in the calendar year 1943.

It appears to us that an appeal taken from the original decision would have been allowed to the extent that the plan submitted was in conformity with the provisions of Decision Bulletin 17. Considerable time has since been consumed before the Regional Board, but the delay does not seem to be entirely chargeable to the Union. In those circumstances, it would be unfair to deprive the workers of the decision which could have been rendered several months ago.

We think that paragraph A of the D.B. 17 provisions attached to the Regional Board's direction of January 13, 1944, should be amended to conform with the original application, to the extent necessary to give effect to the retroactive feature; so that, any worker covered by the application who on May 1, 1944, had accumulated the required continuous service record during the two years becomes entitled to 2 weeks' paid vacations.

The appeal is therefore allowed.

May 3, 1944.

Re: Brosseau, Limitée (Montreal, Que.) and Le Syndicat des Employés de la Boulangerie et de la Pâtisserie de Montréal, Inc.

Reasons for Decision

This is an appeal by the syndicate from a decision of the Quebec Regional Board dated January 11, 1944, declining an application made on behalf of certain employees of the Company. Leave to appeal was granted by the Regional Board.

The application is dated December 13, 1943, and must be dealt with under the provisions of P.C. 9384. It requested the full cost-of-living bonus, an increase in the rate of commission paid to salesmen with a guaranteed minimum weekly salary of $25, and an increase for inspectors.

With respect to cost-of-living bonus, War Labour Boards no longer have the power to grant increases except in the cases where the application was received prior to December 9, 1943, which is the date of the new wages control order.

On the other matters involved, the Regional Board did not think that the case was one where it was necessary to rectify a "gross injustice" (section 20 (*a*) of P.C. 9384), because the commission rates paid by this company compare favourably with those paid by most bakeries in Montreal.

In the circumstances, we must dismiss the appeal.

May 12, 1944.

Re: Aluminum Company of Canada, Limited and La Fédération Nationale des Employés des Industries de l'Aluminium, Inc.

Reasons for Decision

This appeal by the Federation is from a decision of the Quebec Regional Board dated October 2, 1943, refusing to increase the cost-of-living bonus from $3.30 to the then maximum of $4.25 in its plants located in the Province of Quebec.

The power of a War Labour Board to deal with this matter is in the following section 34 (3) of P.C. 5963:—

"The National Board may direct any employer to pay a cost-of-living bonus calculated on the rise in the cost-of-living index number above the index number for such month prior to the month of October, 1941, as such Board finds fair and reasonable, but not, in any event, earlier than the effective date of the last general increase in wage rates paid by such employer and not earlier than August, 1939, whichever is the later.

"Provided that where in the opinion of the National Board, the application of this subsection has resulted in, or will result in, unequal and unfair combinations of wage rates and cost-of-living bonuses within an industry, it shall be within the power of the National Board to order such adjustment of the cost-of-living bonus through the use of a month other than as prescribed above but not earlier than August, 1939, as the National Board may determine. (Amended, P.C. 2370.)"

We find that the present amount of authorized bonus was adopted on the unanimous recommendation of a Board of Conciliation

and Investigation under the Industrial Disputes Investigation Act. (Report dated November 13, 1941—see volume 41, LABOUR GAZETTE, p. 1484.) That being the case, we think that, under the subsection as it first stood, the question must now be taken as a settled matter.

But, the Fédération contends that by virtue of the proviso added to the subsection on March 23, 1943, by P.C. 2370, the Board should now order the full bonus because of the situation prevailing in other war industries. In our opinion, it would be straining the words "within an industry" beyond all reasonable limit to order a full bonus in the aluminum industry for the reason that it is being paid in, for example, the aircraft plants or the shipyards.

We must conclude that there is no case for an increase and the appeal will therefore be dismissed.

May 11, 1944.

Re: Aluminum Company of Canada, Limited and La Fédération Nationale des Employés des Industries de l'Aluminium, Inc. and International Union of Aluminum Workers

Reasons for Decision

This is an Appeal from Findings and Directions of the Regional War Labour Board for Quebec dated 2nd October, 1943, 20th October, 1943, and 7th December, 1943, regarding payment at the rate of time and one-half for overtime worked by plant employees in excess of 8 hours per day *and* 48 hours per week, and on Statutory Holidays, at Arvida, Beauharnois, Shawinigan Falls and LaTuque.

Under prevailing practice, established by agreement or otherwise, previously approved by the Regional War Labour Board for Quebec, plant employees of the Aluminum Company at the places mentioned have been paid overtime at the rate of time and one-half for work required in excess of 8 hours per day, subject to their having worked the number of hours in regular shifts during regular pay periods (generally 96 hours).

In various industries and plants, including many which are engaged in the production of war materials, it is established practice for employees to be paid at the rate of time and one-half for work required in excess of 8 hours per day *or* 48 hours per week. There would appear to be justification for the claim that the requirement of a minimum of 96 hours work in a pay period before the time and one-half rate for work in excess of 8 hours in any one day would be payable is rather unreasonable. During the hearing of the Appeal it was voluntarily stated on the behalf of the Company that it would be agreeable to a reduction of this requirement to 48 hours per week. In an industry in which continuous operation of the plant throughout 24 hours a day, 7 days per week, is required, as in the case of the Aluminum Company's operations, it is apparent that absence of certain classes of employees from duty on Sundays and Statutory Holidays could not be allowed without interference with regular operations and production. Under wartime conditions changes in principle in rules governing overtime pay established by agreement are not warranted.

Having regard to all the conditions involved in this case, it is the opinion of the National War Labour Board that the Appeal should be allowed to the extent that the Company's overtime pay conditions should be adjusted to provide that effective from this date its plant employees at Arvida, Beauharnois, Shawinigan Falls, LaTuque and Isle Maligne, should be paid at the rate of time and one-half as overtime for work required to be performed in excess of 8 hours per day *or* 48 hours per week, provided that payment for overtime at time and one-half for work required to be performed by an employee in excess of 8 hours in any day shall not be invalidated if during any week in which such overtime is worked it is impossible for him to work 48 hours because of approved absences from duty due to such causes as layoffs, seventh day off duty, vacations, or on Statutory Holidays specified in agreements.

There will be Finding and Direction accordingly.

May 12, 1944.

Re: Gouin Lumber Company, Limited (Trois-Rivières, P.Q.) and United Brotherhood of Carpenters and Joiners of America, Local 2617

Reasons for Decision

An appeal from a decision of the Regional War Labour Board for Quebec dated January 3, 1944, refusing the Brotherhood's application for a general wage increase, full cost of living bonus and an overtime rate. The application falls to be decided under the provisions of P.C. 5963.

The Regional Board found that under the conditions required by section 25, there was no case for the increases asked. On the hearing of the appeal, the company stressed its

inability to pay the increased wage bill and it submitted financial statements for the years 1941, 1942 and 1943. From these statements it would appear that this business had made practically no profits during the past three years. It was disclosed that this was partly due to Mr. Gouin's death in 1942.

Whatever the financial position may be, it appeared at the hearing that the Brotherhood had not been recognized by the Company as the employees' bargaining agency. We recommended to the parties that they get together and settle first the Brotherhood's status and to negotiate then on the matter of wages.

In the circumstances, we think we must dismiss the appeal, without prejudice however to any new application the parties or one of them may submit to the Regional Board following the negotiations.

May 12, 1944.

Re: J. C. Wilson Limited (Lachute, Que.) and International Brotherhood of Paper Makers, Local 437

Reasons for Decision

An application by way of appeal by the Brotherhood from a decision of the Quebec Regional Board dated December 27, 1943, under P.C. 5963.

The application was for a general wage increase in a craft paper mill and the Regional Board, after an investigation of prevailing rates in the Lachute area, allowed increases to 45 of the 115 employees covered by the application.

The Regional Board found that the rates were low within the meaning of section 25 and then, in what appears to have been a spirit of compromise, proceeded to raise some of them, mostly in the higher paid classifications. There is no evidence from which it could be argued that prevailing differentials in the plant should be disturbed, and no reason appears for refusing to some classifications the increases found to be justified under the section. We therefore conclude that the application should have been granted in toto.

As to the effective date of the decision under appeal, the Regional Board rather than make a direction left the matter to further negotiation. This is a course which in many cases side-steps responsibility and invites trouble. We think this decision should be effective from the date of application, October 12, 1943.

The appeal is allowed.

May 19, 1944.

Re: Bryce Bakeries Limited (Winnipeg, Man.) and Canadian Bakery Workers' Union, Local No. 1

Reasons for Decision

This is an application by the Company by way of appeal from a ruling dated February 23, 1944, of the Manitoba Regional Board. The matter to be determined was whether a form of contract was a contract of service creating the relationship of employment governed by the provisions of the Wages Control Order. The Regional Board concluded that it did. It refused leave to appeal.

The question involved is of the kind which in our view should be allowed to come to the National Board on appeal. Their decision undoubtedly appeared to the Regional Board to be unassailable, but where the matter is one of interpretation rather than an exercise of discretion, we do not think leave should be withheld and we therefore allow the application.

On the merit of the appeal, we are of opinion that the Regional Board made the proper ruling when it found that the direction and control maintained by the company under the contract submitted was such as to leave intact the substantial relationship which was that of employment as contemplated by P.C. 9384, alhough the relationship established in form is that of vendor and purchaser. The result is that in so far as the contract alters the terms of employment it must receive the approval of the War Labour Board.

The appeal is therefore dismissed.

May 19, 1944.

Re: Dominion Bridge Company, Limited (Calgary, Alta.) and Rolling Mill Employees' Local Union No. 23180

Reasons for Decision

This is an appeal from a decision of the Alberta Board refusing, under the provisions of P.C. 5963, a 5 cent hourly increase in the base labour rate. The original application covered other matters, but leave to appeal appears to have been granted by the Regional Board in respect only of the base rate increases.

The decision of the Regional Board is based upon local comparisons. It was found that the 45 cent rate plus full cost of living paid

in this mill compared favourably with the prevailing unskilled labour rate paid in the construction industry in the Calgary district.

This case is similar in this respect to the James Pender & Company case (1944 LABOUR GAZETTE, p. 282) and it must be held that it was not an error of principle for the Regional Board to adopt a local comparison rather than one further afield.

We must therefore dismiss the appeal.

May 19, 1944.

Re: Oliver Co-operative Growers' Exchange (Oliver, B.C.)

Reasons for Decision

This is an appeal from a decision of the British Columbia Board under P.C. 9384 in respect of an application for salary increases to office and permanent staff. The increases applied for were 15 per cent of the salaries of $15 monthly in the case of salaries less than $100. The application was first refused on the ground that it had not been shown that the increases were necessary to rectify a "gross inequality" or "gross injustice". Then upon reconsideration, the Regional Board agreed to allow a $5 monthly increase in all classifications.

By leave of the Regional Board, this appeal is now brought from the latter decision.

The principal ground proposed in support of the appeal is that the increases to the permanent staff are justified by the substantial increases previously approved for the hourly-paid classifications employed seasonably by the Exchange.

Although our judgment of the application on this ground may have perhaps been different, if we had had to deal with it in the first instance, the Regional Board have arrived at their decision upon what appears to have been a thorough consideration of all relevant facts, including comparative data on salary rates paid in similar businesses. That being so, and in view of our policy, we do not consider this to be a case where we should interfere and substitute our judgment for that of the local Board.

We must therefore dismiss the appeal.

May 19, 1944.

Re: Dominion Bridge Company, Limited (Toronto, Ontario) and United Steel Workers of America, Local 2808

Reasons for Decision

This appeal is taken by the Union from a decision of the Regional Board for Ontario declining an application for payment of the full cost-of-living bonus, under the provisions of P.C. 2370, in the Company's Sorauren Avenue Munitions Plant. The weekly bonus paid was $2.48.

Prior to the Order in Council amending section 34 (3) of P.C. 5963, the increase in the bonus which a War Labour Board could direct was limited to the amount represented by the rise in the cost-of-living index since the effective date of the last general increase in wage rates. The amendment of March 23, 1943, gave the Boards the power to direct payment of the full bonus in any case, but only when an unequal and unfair combination of wage rates and cost-of-living bonus had been shown to exist *"within an industry"*. We must say that no attempt was made to establish a case of disparity within the munitions industry. That the full bonus was ordered in the Company's Shaw Street structural steel plant, is of course of no assistance to the appeal, nor is the fact that the Company was willing to pay the full bonus.

We have no alternative but to dismiss the appeal.

May 3, 1944.

Re: The Garlock Packing Company of Canada, Limited (Vancouver, B.C.)

Reasons for Decision

This appeal is from a decision of the British Columbia Board dated December 8, 1943, on an application for an increase in basic rate of an office employee. The increase sought resulted from the discontinuance by the Company of a voluntary periodical bonus and was meant as a compensatory adjustment.

The Regional Board was of the view that the adjustment proposed was insufficient and refused the application. Under section 60 of P.C. 5963, the Company was clearly free to discontinue payment of the bonus and the effect of the Regional Board's decision in reality defeats what appears to have been its intention.

Our view is that the appeal should be allowed and the rate of $145 be approved.

May 22, 1944.

Re: Johnson Wire Works Limited and International Association of Machinists, Lodge 1758

Reasons for Decision

(Oral Decision)

We think we can dispose of this case. This is an application within the proviso of section 34 (3) of P.C. 5963, for an increase in the cost-of-living bonus.

The one and only condition laid down by the enactment made by P.C. 2370 is that there be within the industry an unfair and unequal combination of wage rates and cost-of-living bonus.

In this case, on the evidence, we must come to the conclusion that that condition has not been met, and consequently we must confirm the decision of the Quebec Regional War Labour Board, and dismiss the appeal.

May 16, 1944.

Re: Grover Mills, Limited (Montreal, Que.) and National Clothing Workers' Union

Reasons for Decision

(Oral Decision)

I do not think it necessary to reserve decision in this matter.

Notwithstanding the fact that the appeal does not ask for an increase in the cost-of-living bonus, the Board is of the opinion under all the circumstances of this case, that it can properly disregard the date of any general increase, there having apparently been no authorization for it, and being a matter in dispute as to whether there ever was a general increase or not. The Board can disregard that.

A direction will issue that the Company pay the full cost-of-living bonus of 18·4. The Company, however, will not be required to continue to pay the attendance bonus.

The direction as to the increase in cost-of-living bonus will be retroactive to the date of the application.

May 22, 1944.

Re: S. M. T. (Eastern) Limited and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 1229

Reasons for Decision

(Oral Decision)

It is apparent that this application made on behalf of the employees of the New Brunswick Power Company was considered at the same time as this application was considered, and that the factors relating to comparability which were required by the relevant Order in Council P.C. 5963 were fully considered by the Regional War Labour Board of New Brunswick.

It is entirely a question of fact. After hearing the appeal in the New Brunswick Power Company case this Board dismissed it, and we see no reason why we should do otherwise in the present case.

The appeal is therefore dismissed.

May 24, 1944.

Re: Sorel Steel Foundries Limited and Le Syndicat National des Fonderies de Sorel, Inc.

Reasons for Decision

This appeal by the syndicate is from a decision of the Quebec Regional War Labour Board dated January 18, 1944, on an application for full cost-of-living bonus under section 34 (3) of P.C. 5963. The sequence of relevant events is as follows:—

On September 27, 1943, the syndicate petitioned the Regional Board for an increase in the bonus from $1.85 to the then full amount of $4.25. This was apparently done in anticipation of the expiration on October 31, 1943, of the current collective agreement. There was a hearing and the Board requested the parties to come to an agreement upon the bonus question. The parties renegotiated their agreement generally, but failed to arrive at an understanding on the bonus and the following clause was inserted in the new contract dated November 2, 1943:—

"Le boni de vie chère sera celui que détermineront les Conseils régional et national du Travail en Temps de guerre après avoir entendu les deux parties contractantes et sera sujet aux conditions établies par le Conseil en cause et aux augmentations prescrites en vertu du C.P. 5963."

Subsequently on November 24, 1943, the syndicate renewed its application for the full bonus retroactively to the date of the new agreement. By that time the bonus paid by the Company had become $2.20 as a result of the mandatory increase of November 15, 1943. By the decision now under appeal the Regional Board ordered the Company to add to the basic rate on February 15, 1944, when the bonus was to be merged, "un montant de ·05

l'heure, prenant crédit toutefois de la dernière augmentation de 1·4 point dans le boni de vie chère (ordonnance du 3 novembre 1943 du Conseil National)".

The parties interpreted the decision to practically mean a dismissal of the application.

At the hearing we placed a different interpretation upon the Regional Board's decision and have since communicated with its Chief Executive Officer who has confirmed our view. What the decision meant to do was to increase the weekly bonus by $2.05 (48 hours x 5 cents=$2.40—35 cents), so as to in effect bring it up to a total of $4.25. In the light of the decision in the Hull Iron and Steel Foundries Ltd. case (Dominion Labour Service 38-1043; 43 LABOUR GAZETTE, p. 1261), we are of the view that there was a factual basis under the relevant proviso to section 34 (3) of P.C. 5963 for the increase ordered by the Regional Board.

We think also that in the circumstances related above there is considerable merit in the syndicate's argument for retroactive payment to November 2, 1943, and the finding and direction will give effect to it. To this extent the appeal is allowed.

May 17, 1944.

Re: Knitters, Limited (Marieville, P.Q.) and United Textile Workers of America, Local 7

Reasons for Decision

The Union applies by way of appeal from a decision of the Quebec Regional Board dated December 16, 1943, refusing an application for full cost-of-living bonus under P.C. 5963. The Company was paying the mandatory amount of 95 cents or 3·8 per cent of the basic wage.

Under section 34 (3) of the Order in Council the Regional Board could increase the bonus on either of two bases: (1) by resorting to the rise in the cost-of-living index since the date of the last general increase in the mill; or (2) by adjusting an unfair combination of wage rates and bonus within the knitting industry. In any event, the Regional Board felt that it was incumbent upon it to examine the comparative situation prevailing and having found that the rates and bonus paid by this Company compared favourably with those paid by employers considered by the Board to be "similar", it denied the application.

The Union argued their case upon a comparison with mills located at Lachute and St. Jerome where the full bonus was being paid. The Company's reply is that these mills are much larger and more modern than the smaller mills located at Marieville. From the material filed, it appears that the Lachute and St. Jerome mills were also proposed to the Regional Board as a basis of comparison. In the circumstances we do not think we can properly interfere and we must of necessity dismiss the appeal.

May 31, 1944.

Re: Royal Securities Corporation Limited (Montreal, Que.)

Reasons for Decision

The Company appeals from decisions of the Regional Boards for Ontario, Alberta and British Columbia declining to grant authorization to pay a voluntary bonus for the year 1943 on the common ground that there was no power in the Wartime Wages Control Order, 1943, to do so.

The Company had first applied to the Quebec Board under the provisions of P.C. 5963 and received an authorization stated to be pursuant to section 29 of that Order. Then, it applied to the Regional Boards for the six other provinces in which it has employees. They all dealt with the application under the provisions of the new Order P.C. 9384. The Manitoba, New Brunswick and Nova Scotia Boards gave the authorization, while the three mentioned above refused it.

We must first say that on the material submitted we cannot find that the Company had established a practice of paying voluntary periodic bonuses prior to November 15, 1941, and consequently section 60 of P.C. 5963 was inapplicable. The last bonus paid was in 1936. It must also be said that section 29 of P.C. 5963 does not afford a basis for the Quebec Board's decision which in our opinion was rested upon an entirely wrong view of the meaning and intent of that section. The proper conception of this case was taken by the New Brunswick and Nova Scotia Boards. The application to the Quebec Board was none other than one for a wage increase for the year 1943. To meet the prohibition against decreasing wages in subsequent years, the establishment of a range and the general authorization of section 24 (2) of P.C. 5963 were available.

The present wage control order affords no greater authority than the former with respect to the inauguration of periodic voluntary bonuses, notwithstanding what is stated in section 26 of P.C. 9384. Taking that view, we can only dismiss the appeal, but we shall reserve to the company the privilege of making fresh applications to the three Boards concerned upon the proper basis, that is upon

the basis of comparative rates, and for that purpose, because the original application was made under the former order, consideration of the matter could very well be under section 25 of P.C. 5963.

May 3, 1944.

Re: Detroit and Windsor Subway Company and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 195

Reasons for Decision

This is a joint application for approval of a wage increase, under the provisions of P.C. 5963.

The employees involved are the Canadian-resident employees of the Detroit & Canada Tunnel Corporation, a United States corporation who, together with the applicant company (a wholly-owned Canadian subsidiary), owns and operates a vehicular tunnel under the Detroit River between downtown Windsor and downtown Detroit. There is one agreement covering both Canadian and U.S. employees who are represented by the same bargaining agency. The evidence before us was to the effect that from the inception (fourteen years ago), all employees in the classifications mentioned in the application, whether residing in Canada or in the United States, were paid the same rates of pay, except that Canadian employees were paid in Canadian dollars and the United States employees were paid in U.S. dollars.

The present application covers a general 5 cent hourly increase contemplated in the parties' latest agreement dated November 1, 1943. We are advised that this increase has received the approval of the appropriate United States authority.

These facts, in our view, place the case within the purview of section 62 of the Order and we need not be bound by the principle of comparison laid down in section 25.

We are of opinion that in the circumstances described the application should be granted with effect from November 1, 1943. However, effect must also be given to the following subsection 2 of section 62:

"In any such case, if the Board directs that a range of wage rates or a wage rate be increased, no cost of living bonus shall be paid to any employee to whom any such increased wage rate is paid."

We were informed that the Canadian employees have been receiving the mandatory cost of living bonus. What has been received since the effective date of this decision will be considered to have been paid on account of the present increase, and for the future established rates will be the rates mentioned in the collective agreement and now approved, and not those arrived at under the terms of the Wartime Wages Control Order, 1943 (P.C. 9384). In other words, these employees should not receive the benefit of the cost of living bonus in addition to that of U.S. rates of pay.

The applicants have also requested that our interim finding and direction of February 26, 1944, on vacation pay and overtime conditions be made effective from November 1, 1943. Having acceded to the agreement date for rates of pay, we see no reason to refuse that date on the other matters.

There will be findings and directions accordingly.

May 11, 1944.

Re: The Skinner Company Limited (Oshawa, Ontario) and United Automobile Workers of America, Local 222

Reasons for Decision

An appeal by the Union from a decision of the Ontario Regional Board refusing an application for full cost of living bonus under P.C. 5963.

The bonus paid by this Company was first considered by the Regional Board on March 11, 1943, prior to P.C. 2370. Under section 34 (3) as it then stood, the Board directed payment of a bonus calculated on the rise in the cost-of-living index number above 112·8. The present application must therefore be considered under the subsequent Order in Council which added the proviso to the section, and we must find "within (the) industry" such an unequal and unfair combination of wage rates and bonus as to make it necessary to order an increase in the bonus paid to these employees.

The Union rely upon the fact that a full bonus was paid in many of the plants located in Oshawa. Unfortunately this is not enough to give us jurisdiction. The nature of the comparability contemplated by the words "within an industry" of P.C. 2370 is of a much different character than that which lay at the root of section 25 of P.C. 5963. We must follow a much narrower process and find, in this instance, within the metal stamping industry the basis for an increase.

Upon examination of the evidence we have arrived at the conclusion that there is no ground upon which we can reverse the Regional Board's decision and the appeal will have to be dismissed.

May 26, 1944.

Re: Ontario Steel Products Company Limited (Chatham, Ontario) and United Automobile, Aircraft and Agricultural Implement Workers of America, Local 127

Reasons for Decision

An application was made by the Union under P.C. 5963 for a general wage increase. Later the Company joined in the application after certain modifications had been made. The latter application was approved by decision dated December 3, 1943, of the Regional Board for Ontario, except as to five of the unskilled classifications. Leave to appeal in respect of these classifications was granted below and the Company joins in the appeal.

The Regional Board proceeded upon the basis that the rates submitted would exceed the common labour rate in the Chatham area. We must say that we have no information upon which it could be said that the Board came to a wrong conclusion and we must therefore dismiss the appeal.

May 26, 1944.

Re: National Union of Operating Engineers of Canada and Ordinance No. 6 of the Quebec Minimum Wage Commission

Reasons for Decision

This is an appeal by the Union from a decision of the Regional War Labour Board for Quebec dated December 10, 1943, refusing an application under P.C. 5963 for an upward revision of some of the basic rates as well as a reduction in the hours of the work week and other changes in the working conditions provided by Ordinance No. 6, 1943, of the Quebec Minimum Wage Commission. Leave to appeal was granted by the Regional Board.

Ordinance No. 6 governs stationary enginemen and firemen in the district of Montreal and the current edition came into force on June 12, 1943, under the provisions of the Minimum Wage Act (R.S.Q., 1941, c. 164), and remains in force until January 1, 1945. Early in 1943, the Commission with the approval of the Regional Board ordered a general increase in basic rates. The further increase requested is a substantial one ranging from 20 to 25 cents in the minimum hourly rates of class enginemen and firemen with the establishment of a 48-hour week and direction to pay full cost-of-living bonus. In effect the appellant is seeking a fairly thorough revision of the Ordinance. Counsel for the Union made a strong argument of the recent rates approved by the Regional Board for the trades in the construction industry in the District of Montreal and subsequently enacted by the provincial authorities pursuant to the provisions of the Collective Agreement Act (R.S.Q., 1941, c. 163). In the view we take of the matter, there is no need to decide whether the comparison is a proper one for the purpose of applying section 25 of the Order in Council.

The Ordinance applies to a "category of employees" (section 13 of the Act) in a given territory. Stationary enginemen are employed by all types of employers and in many kinds of industry and buildings. The Regional Board felt that the raising of the minimum rates to the high level requested might disrupt wage structures and disturb many established differentials. With that view we agree and we also feel that it would be a procedure hardly contemplated by the Wages Control Order to cut across many existing wage relationships by raising minimum rates for certain occupational classifications in a whole territory to what might conceivably in the case of certain employers be prevailing rates. Surely the effect would be anything but stabilizing for a large number of the wage schedules which would be affected. In any event the matter should rest primarily with the provincial authorities and a step of this kind should not be taken without the concurrence of the Minimum Wage Commission.

We are therefore of the opinion that the appeal must fail.

June 2, 1944.

Re: Hudson's Bay Company (Vancouver, B.C.)

Reasons for Decision

An appeal from the British Columbia Board, by the leave of that Board in respect of a decision dated March 9, 1944. The application was originally made under P.C. 5963 and requested blanket approval of a voluntary bonus plan for department managers in the Company's Vancouver retail store, described in the Company's brief as follows:—

"Bonuses are not based on any fixed percentage to net results but, instead, important considerations used to determine the amount of bonus earned are the final net profit of the department, volume of sales, departmental margin, continuity of successful operation, and a certain number of intangibles such as spirit

of co-operation, ability to teach, general all-round attitude toward the job, etc."

The Company had a set schedule of "units" upon the basis of which individual bonuses were calculated. The practice was said to have been established long before the effective date. The governing provision was section 60 which read as follows:—

"Notwithstanding anything contained in this Order, any employer who, prior to November 15, 1941, paid to his employees any voluntary periodical bonus other than a cost-of-living bonus, may continue or discontinue the payment of such bonus, provided that, if payment thereof is continued, the *rate of payment* shall not exceed the *rate* established by practice for the year ending on November 15, 1941, but no employer shall inaugurate the payment of any such bonus after such date."

The Regional Board ruled that the Company could pay voluntary bonuses not exceeding the "*amounts* which were paid prior to November 15, 1941, with respect to the occupational classifications on (the Company's) payroll."

The application was renewed under P.C. 9384 and the Regional Board found that there was nothing in the new Order which permitted it to alter its previous decision. The relevant provision is now section 26 which reads as follows:—

"No employer shall make any gratuitous payment or other gift of any kind whatsoever having a pecuniary value, other than a monetary Christmas gift not in excess of twenty-five dollars, to any of his employees in any occupational classification for which he is required to establish, or to obtain a direction of the National Board establishing a single rate or range under this Order; provided that where an employer paid to his employees in any such occupational classification prior to November 15, 1941, or thereafter pursuant to any authorization of the National Board, a voluntary periodical bonus other than a cost-of-living bonus, he may continue or discontinue the payment of such bonus to such employees, but if he continues payment thereof, the *yearly rate of payment* shall not exceed the *rate of payment* established by practice of the year ending November 15, 1941, or by such authorization."

It is perhaps useful to note that the redrafted section assumes that War Labour Boards have had the power of authorizing the inauguration of voluntary bonuses after November 15, 1941. We can find no such power in either of the two preceding Orders in Council P.C. 8253 and P.C. 5963.

What the order stabilizes is the "yearly rate", not the amount, of voluntary bonus at the *rate of payment* in the basic year ending November 15, 1941.

We are of opinion that the word "rate" in this context should be taken in a fairly broad sense. The Concise Oxford Dictionary gives to the word a meaning connoting "numerical proportion", but it also opens the more flexible notion of "standard or way of reckoning". Taken in the latter sense, we think the Company could under the authority of either section continue payment of bonuses in accordance with the plan established prior to wage control and in effect for the basic year. If modifications in the plan were proposed in the applications, we must say that War Labour Boards are without jurisdiction to approve upward adjustments; but we take it that such is not the case and that bonuses are to be reckoned in exactly the same manner as they were for the basic year. We are confident that the Company will operate its bonus plan in compliance with the intent and purposes of wage control.

We therefore conclude that the appeal should be allowed.

May 22, 1944.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with Proceedings under the National Labour Relations Board, Conciliation Work of the Department of Labour, and Strikes and Lockouts in Canada, Great Britain and other countries.

Recent Proceedings under the Wartime Labour Relations Regulations.—Under the Wartime Labour Relations Regulations, P.C. 1003, the Government has extended its jurisdiction over employer-employee relations which are normally exclusively within the provincial field, to the extent considered necessary to cover adequately employers and employees in industries "essential to the efficient prosecution of the war", but without attempting to include other industry which has not a direct bearing on war production. In so far as these latter industries are concerned, each province can make its own decision as to whether or not they shall be brought under the regulations.

Provision is made in the regulations for an agreement between the Dominion and any province to set up suitable provincial agencies for the administration of the regulations. Such agreements have been made with the provinces of Ontario, British Columbia, New Brunswick, Manitoba and Saskatchewan.

The National Board has adopted a set of Regulations governing rules of procedure, which are reproduced below.

Also appearing in this month's section is an account of the Ford Motor Company of Canada strike.

Conciliation Work of the Department of Labour.—Conciliation proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Strikes and Lockouts.—The latest information concerning strikes and lockouts in Canada is published monthly in tabular form, with a summary appearing once a year. The summary of strikes and lockouts in Canada and other countries during 1943 appeared in the LABOUR GAZETTE for March, 1944.

The latest available information as to strikes and lockouts in Great Britain and other countries appears from month to month.

Rules of Procedure of the Wartime Labour Relations Board

Regulations Governing Various Types of Applications

THE Wartime Labour Relations Board (National) on June 7 adopted the Board Regulations, reproduced below, with respect to rules of procedure in making various types of applications to the Board under the Wartime Labour Relations Regulations, P.C. 1003 (L.G., Feb., 1944, p. 135).

The rules of procedure laid down concern applying for certification of bargaining representatives, seeking the intervention of the Board for conciliation services, requesting a procedure for the final settlement of grievance disputes, appealing from the decisions of Provincial Boards, and asking leave to institute prosecutions under the Regulations.

These Board Regulations were adopted in accordance with the provisions of Section 27 (1) of P.C. 1003, which reads as follows:

> The Board may, with the approval of the Minister, make such regulations as may be necessary to enable it to discharge the duties imposed upon it by these regulations and to provide for the supervision and control of its officers, clerks and employees.

The Minister of Labour has given his approval of the Board Regulations as required by the section.

10247—4½

Wartime Labour Relations Board (National) Board Regulations

1. (1) In these Regulations, unless the context otherwise requires,

(*a*) "National Board" means the Wartime Labour Relations Board;

(*b*) "Provincial Board" means a Labour Relations Board exercising any of the powers of the Wartime Labour Relations Board in any province;

(*c*) "Person" includes firm, corporation, trade union, employees' organization or employers' organization.

(2) Other words and expressions used in these Regulations shall, unless the context otherwise requires, have the same meaning as in the Wartime Labour Relations Order (Order in Council P.C. 1003 of February 17, 1944 and any amendments thereto).

Procedure

Applications for Certification

2. Any application for certification of bargaining representatives shall be required to be submitted in writing duly verified by statutory declaration.

3. (1) The following rules shall apply to proceedings before the National Board and also to proceedings before a Provincial Board unless and until such Provincial Board adopts its own rules of procedure. The Board shall give notice in such manner, as, in the circumstances, it deems sufficient to any person having an immediate interest in the matter in respect of which application is made and shall furnish a copy of the application to him and shall give an opportunity for representations to be made and evidence adduced by or on behalf of every such person with regard thereto.

(2) Every person shall within seven days of the receipt by him of such notice and copy of application notify the Chief Executive Officer of the Board in writing whether he wishes to contest the application and in such case he shall within fourteen days of the receipt by him of such notice and copy of application file in the office of the Board his reply and the reply shall be verified by statutory declaration in the same manner as in the case of an application.

(3) The reply shall contain a concise statement of the material facts upon which the person replying intends to rely and shall specifically admit, deny or explain each of the statements made in the application. The name and address of the person replying shall be stated in the said reply.

(4) If any person shall fail within seven days of the receipt by him of a copy of the application to notify the Chief Executive Officer that he wishes to contest the application or, having so notified the Chief Executive Officer, shall neglect to file his reply in the office of the Board within the time hereinbefore limited or to give his name and address in such reply he shall not be entitled to any further notice of the proceedings commenced by the application and relief under the said application may be granted without giving any further opportunity for representations to be made or evidence adduced by or on his behalf with regard thereto, but nothing herein contained shall prevent the Board from hearing further representations or evidence from any such person.

(5) Upon the filing of a reply the Chief Executive Officer shall forthwith send a copy of the reply to the applicant and shall give notice to the applicant at the address stated in the application and to all parties filing replies at the address set out in the said replies respectively fixing a time and place for the hearing of the application. If necessary, this notice may be given by telegraph or telephone.

(6) The Board shall make such inquiries and investigations into the matter in respect of which such application is made as it deems necessary for the proper disposal thereof.

Applications for Intervention of a Board Pursuant to Section 11 of the Wartime Labour Relations Regulations

4. An application by a person for the intervention of a Board pursuant to Section 11 of the Wartime Labour Relations Regulations may be made by letter or telegram to the Chief Executive Officer of the Board.

(1) The application shall set forth the time spent and the efforts made by the parties to negotiate an agreement and state the grounds for the belief that an agreement will not be completed in a reasonable time.

(2) Upon receipt of the application for intervention, the Chief Executive Officer may request such additional information as may be necessary from the applicant and a statement from the other interested party or parties concerned, or may request the parties to appear before the Board for a hearing of the application prior to reference of the matter to the Minister as specified in Section 12 (1) of the Regulations.

Applications for the Establishment of an Appropriate Procedure for the Consideration and Settlement of Disputes, Pursuant to Section 18 (2) of the Wartime Labour Relations Regulations

5. An application for the establishment by a Board of an appropriate procedure for consideration and settlement of disputes concerning the interpretation or violation of a collective agreement pursuant to Section 18 (2) of the Wartime Labour Relations Regulations may be made by letter or telegram to the Chief Executive Officer of the Board.

(1) The application shall set forth the names and addresses of the parties to the dispute, the date of the execution of the collective agreement, and a statement that the agreement contains no appropriate procedure for consideration and settlement of disputes concerning its interpretation or violation. If the applicant claims that the procedure contained in the agreement is inappropriate, the reasons for so claiming must be given.

(2) The applicant shall also file a copy of the collective agreement in connection with which it is desired that an appropriate procedure be established.

(3) On receipt of the application for the establishment of an appropriate procedure, the Chief Executive Officer may request such

additional information as may be necessary from the applicant and a statement from the other interested party or parties concerned, or may request the parties to appear before the Board for a hearing of the application, or may instruct an officer to investigate the application and report thereon to the Board.

Applications for Leave to Institute Prosecutions Under the Wartime Labour Relations Regulations

6. An application to a Board for leave to institute a prosecution under the Regulations may be made by letter or telegram to the Chief Executive Officer of the Board.

(1) The application shall specify the provision of the Regulations alleged to have been violated and material facts regarding such violation.

(2) On receipt of an application for leave to institute a prosecution, the Chief Executive Officer may request such additional information as may be necessary from the applicant and a statement from the other interested party or parties concerned, or may request the parties to appear before the Board for a hearing of the application, or may instruct an officer to investigate the application and report thereon to the Board.

Appeals

7. (1) Any person directly affected by any decision or order of a Provincial Board may appeal to the National Board, if

(*a*) The Provincial Board making such decision or order grants leave so to appeal and the request for such leave to appeal has been made within fifteen days of the announcement of the decision or order of such Provincial Board; or

(*b*) The National Board grants leave so to appeal and the request for such leave to appeal has been made within sixty days of such announcement.

(2) Within fifteen days after the granting of such leave to appeal the appellant shall appear before the National Board and present the said appeal provided, however, that the National Board may for good cause adjourn the hearing of the said appeal from time to time.

(3) On any such appeal, the decision or order of the National Board shall constitute the decision or order of the Provincial Board as if originally made by it.

General

8. The National Board may from time to time amend these Regulations.

Made pursuant to Section 27 of the Wartime Labour Relations Regulations of February 17, 1944, P.C. 1003, this 7th day of June, A.D. 1944.

G. B. O'Connor,
Chairman.

Bernard Wilson,
Secretary.

Recent Proceedings under the Wartime Labour Relations Regulations

During the month of May eleven applications for certification were granted by the Wartime Labour Relations Board (National). These were:

1. Canadian Brotherhood of Railway Employees and Other Transport Workers and Provincial Transport Company, Montreal, P.Q. Certified May 9.

2. National Syndicate of Electric Power Employees of Shipshaw, and Aluminum Power Company, Shipshaw, P.Q. Certified May 9.

3. Canadian Air Line Pilots Assn., and Canadian Pacific Air Lines, Ltd., Winnipeg, Man. Certified May 9.

4. Catholic Syndicates of Joliette, Que., and Joliette Steel Ltd., Joliette, P.Q. Certified May 9.

5. Canadian Brotherhood of Railway Employees and Other Transport Workers, Div. Nos. 224 and 231 and the National Harbours Board, Halifax, N.S. Certified May 11.

6. National Syndicate of Aluminum Workers of St. Joseph d'Alma, Inc., and the Aluminum Company of Canada, Ile Maligne, P.Q. Certified May 11.

7. Canadian Seamen's Union and Canadian Pacific Railway Co. (S.S. *Princess Helene*), Saint John, N.B. Certified May 23.

8. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (A.F. of L. & T. & L.C.) and Quebec Railway, Light, Heat & Power Co., Ltd., Quebec, P.Q. Certified May 23.

9. B.C. Seamen's Union and Canadian National Steamships Ltd. (*Prince Rupert* and *Prince George*). Certified May 11.

10. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the National Harbours Board (Grain elevator) Montreal, P.Q. Certified May 23.

11. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and National Harbours Board, Quebec, P.Q. Certified May 23.

Cases Investigated and Decision Pending

At the end of the month there were four cases concerning which reports of investigating officers had been received and the decision

of the Board was pending, following preliminary consideration of the Board. These cases, together with the name of the investigating officer concerned are:

1. Association of Employees "Aircraft Division" and Canadian Car & Foundry Co., Ltd., Montreal, P.Q. B. Rose.

2. Chemical Workers Union, Local 23639 (A.F. of L.) and Merck and Company Ltd., Montreal, P.Q. L. Pepin.

3. International Union of Mine, Mill & Smelter-workers' Union, Local 688 and Noranda Mines, Ltd., Rouyn, P.Q. F. LaFortune.

4. Association of Employees and Canadian Car & Foundry Co., Ltd. (Car Division) Turcot & Dominion Works, Montreal, P.Q.

Reports of Investigation to be Referred to Board

In thirteen cases the reports of investigating officers had been received and were awaiting consideration by the next meeting of the Board.

1. United Gas, Coke and Chemical Workers of America and St. Clair Processing Corp., Ltd. (Polymer Corp.) Sarnia, Ont. F. J. Ainsborough.

2. Deepsea and Inlandboatmen's Union of the Pacific, B.C. Division (C.C.L.) and Park Steamships Ltd., Vancouver, B.C. G. R. Currie.

3. United Steelworkers of America and the Steel Company of Canada (St. Ambroise St. plant), Montreal, P.Q. R. Trepanier.

4. United Steelworkers of America, Local 3272 and Western Steel Products, Corp., St. Boniface, Man. H. S. Johnstone.

5. International Union of Mine, Mill & Smelterworkers' Local 690, and Alberta Nitrogen Products, Ltd., Calgary, Alta. F. E. Harrison.

6. Canadian Seamen's Union and St. Lawrence Steamship Company, Buffalo, N.Y. J. P. Nicol.

7. Val d'Or Mine & Mill Workers' Union, Local 654 and Lamaque Mining Co., Ltd., Bourlamaque, P.Q. F. LaFortune.

8. Val d'Or Mine & Mill Workers' Union, Local 654 and Golden Manitou Mines, Ltd., Val d'Or, P.Q. F. LaFortune.

9. International Union of Mine, Mill & Smelterworkers' Local 688 and Beattie Mines (Quebec) Ltd., Duparquet, P.Q., and Toronto, Ont. F. LaFortune.

10. United Steelworkers of America and Dominion Bridge Company, Lachine, P.Q. R. Trepanier.

11. National Catholic Brotherhood of Transport Employees of Quebec, Inc., and Quebec Railways, Light & Power Company (Tramways & Autobus Div.) Quebec, P.Q. R. Trepanier.

12. International Union of Mine, Mill & Smelterworkers' Local 688 and Powell-Rouyn Gold Mines, Ltd., Rouyn, P.Q. and Toronto, Ontario. F. LaFortune.

13. International Union of Mine, Mill & Smelterworkers' Local 688 and Senator-Rouyn Mines, Rouyn and Hull P.Q. F. LaFortune.

Applications Referred to an Investigating Officer

At the end of the month twenty-seven applications for certification had been referred to departmental officers for preliminary investigation and report. These, together with the name of the officer concerned, are as follows:

1. Brotherhood of Railroad Trainmen and Canadian National Railways and Canadian Pacific Railway Co. (Conductors). C. W. Rump.

2. Employees' Welfare Board of the Hudson Bay Mining and Smelting Co., Ltd., and the Hudson Bay Mining and Smelting Company, Ltd., Flin Flon, Man. H. S. Johnstone.

3. Sodium Sulphate Workers' Union, No. 2, and Horseshoe Lake Mining Co., Ltd., Ormiston, Sask. H. S. Johnstone.

4. International Association of Machinists and MacDonald Bros. Aircraft Ltd. (Office and Stores Depts. of Robinson St. Division), Winnipeg, Man. H. S. Johnstone.

5. United Steelworkers of America and Steel Company of Canada (Dominion Wire Works), St. Joseph St., Lachine, P.Q. R. Trepanier.

6. United Steelworkers of America and Steel Company of Canada (Notre Dame and Charlevoix Sts. plant), St. Henri, P.Q. R. Trepanier.

7. Stelco Employees' Association and the Steel Company of Canada, Ltd., Lachine, P.Q. R. Trepanier.

8. Stelco Employees' Association and the Steel Company of Canada, Ltd. (Notre Dame St. plant), Montreal, P.Q. R. Trepanier.

9. Brotherhood of Railway and Steamship Clerks and Freight Handlers, Express and Station Employees and Canadian Pacific Railway (clerical employees and freight handlers). B. Rose.

10. Canadian Union of Asbestos Workers, Local No. 5, and Bell Asbestos Mines, Ltd., Thetford Mines, P.Q. B. Rose.

11. Employees' Union of Wartime Metals Corp. (C.C.L.) and Wartime Metals Corp., Black Lake, P.Q. B. Rose.

12. Winnipeg Electric Employees' Federated Council, One Big Union, Winnipeg, Man., and Winnipeg Electric Company, Winnipeg, Man. H. S. Johnstone.

13. Association of Employees, Propeller Division and Canadian Car & Foundry Co., Ltd., Ville St. Pierre, P.Q. R. Trepanier.

14. Montreal Harbour Staff Employees' Assn. and the National Harbours Board, Montreal, P.Q. L. Pepin.

15. United Association of Locomotive Engineers, Firemen, Brakemen and Dispatchers and the Aluminum Company of Canada, Ltd., Arvida, P.Q. L. Pepin.

16. National Harbours Board Employees' Assn., and the National Harbours Board (Mechanical Employees), Montreal, P.Q. L. Pepin.

17. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express & Station Employees and the National Harbours Board (Cold Storage), Montreal, P.Q. L. Pepin.

18. Canadian Union of Asbestos Workers, Local No. 6 and Johnson's Company, Thetford Mines, P.Q. B. Rose.

19. Calgary Trades & Labour Council (Building Trades Section) and Alberta Nitrogen Products, Calgary, Alta. F. E. Harrison.

20. Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Div. No. 591 and Gatineau Bus Company, Ltd., Hull, P.Q. J. L. MacDougall.

21. Coal Handlers Federal Union, Local 102 and Canadian Import Company, Montreal, P.Q. L. Pepin.

22. Coal Handlers Federal Union, Local 102 and Dominion Coal Company, Montreal, P.Q. L. Pepin.

23. Coal Handlers Federal Union, Local 102 and Scotch Anthracite Company, Montreal, P.Q. L. Pepin.

24. Canadian Seamen's Union, Local 5 and Dartmouth Ferry Commission, Dartmouth, N.S. H. R. Pettigrove.

25. United Steelworkers of America and Canadian Tube and Steel Products Ltd., Montreal, P.Q. F. LaFortune.

26. Canadian Brotherhood of Railway Employees and Other Transport Workers, Div. 229 and Levis Ferry Ltd., Quebec, P.Q. F. LaFortune.

27. International Brotherhood of Electrical Workers, Local B1106 and Quebec Power Company, Quebec, P.Q. F. LaFortune.

Applications Referred to Provincial Administration

During the month seventeen applications were referred to provincial administration under agreements between the Dominion and Provincial Governments. Of these four were referred to Ontario, twelve to British Columbia and one to Manitoba.

Those referred to Ontario were:

1. International Brotherhood of Electrical Workers, Local B1023 and Port Arthur Shipbuilding Co., Port Arthur, Ont.

2. Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 279 and Eastview Bus Service, Ltd., Eastview, Ont.

3. United Brotherhood of Carpenters & Joiners of America, Local 2308 and Kingston Shipbuilding Co., Kingston, Ont.

4. United Electrical, Radio & Machine Workers of America, Local 512 and Bakelite Plastics, Toronto, Ont.

Those referred to British Columbia were:

1. United Steelworkers of America and the Lawrence Manufacturing Company, Vancouver, B.C.

2. United Steelworkers of America and Western Steel Products Corp., Ltd., Vancouver, B.C.

3. Amalgamated Shipwrights, Joiners, Boatbuilders and Caulkers, Local No. 2 and various shipyards, Vancouver, B.C.

4. United Steelworkers of America, Local 2765 and National Machinery Co., Ltd., Vancouver, B.C.

5. Independent Smelterworkers' Union and the Consolidated Mining and Smelting Company of Canada, Ltd. (Tadanac and Warfield plants), Trail, B.C.

6. International Association of Machinists, Lodge No. 692 and Vivian Diesel & Munitions, Ltd. (Plants Nos. 1 and 2), Vancouver, B.C.

7. United Steelworkers of America, Local 3254 and Blair Iron Works, New Westminster, B.C.

8. United Steelworkers of America, Local 2952 and Vivian Diesel & Munitions, Ltd. (Vivian Engine Works), Vancouver, B.C.

9. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and Burrard (Vancouver) Dry Dock Company, Ltd., Vancouver, B.C.

10. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and Burrard Dry Dock Co., Ltd., North Vancouver, B.C.

11. Shipwrights, Joiners and Caulkers Industrial Union, Local No. 1 and North Van Ship Repairs, Ltd., North Vancouver, B.C.

12. Trail and District Smelterworkers' Union, Local 480, C.I.O.-C.C.L. and the Consolidated Mining and Smelting Company of Canada, Ltd., Trail, B.C.

That referred to Manitoba was:

United Steelworkers of America, Local 3238 and Canadian Rogers Sheet Metal & Roofing, Ltd., Winnipeg, Man.

Applications Rejected

1. Application *re* Canadian Brotherhood of Railway Employees & Other Transport Workers and Canadian Pacific Railway Co. (Ticket Sellers, Union Station, City Office and Royal York).

2. Plastic and Linoleum Workers', Local 677 (A.F. of L.) and Dominion Oilcloth & Linoleum Co., Ltd., Montreal, P.Q.

3. International Association of Machinists, Lodge 1758 and Johnson Wire Works, Ltd., Montreal, P.Q.

4. Brotherhood of Railroad Trainmen and Canadian Car and Foundry Co. (Turcot & Dominion Works), Montreal, P.Q.

Applications Recently Received

1. Montreal Packing Plant Employees' Federal Union, Local 66 and Eastern Abattoir Ltd., Montreal, P.Q.

2. Association of Employees and Canadian Car and Foundry Co., Ltd. (Car Division), Turcott and Dominion Works, Montreal.

3. Canadian Union of Soap-stone Workers, Local No. 1 and Mr. Oliva Cyr, employer, Thetford Mines, P.Q.

4. International Union of Mine, Mill and Smelterworkers', Local 688 and Waite-Amulet Mines, Ltd., Rouyn, P.Q., and Toronto, Ont. F. LaFortune.

5. International Union of Aluminum Workers and Aluminum Company of Canada, Ltd., Shawinigan Falls, P.Q.

Ford Motor Company of Canada Strike

THE Ford Motor Company of Canada Limited, Windsor, Ontario, had contractual relations with Local 200, United Automobile Workers of America, the two parties having signed an agreement in December, 1942, and renewed the same with some slight changes in January, 1944.

Under this agreement provision was made for a procedure whereby stewards would handle and investigate grievances. A dispute arose as to the interpretation of this procedure, the Company claiming that the agreement was being violated by the stewards. It was the contention of the Union that a practice had arisen over the last two years under which stewards served grievances without any restrictions and because the Company decided to adhere to its interpretation of the written terms of the contract, representations were made to the Wartime Labour Relations Board (National) for an interpretation or clarification of the grievance procedures in the light of current practice. The Board had arranged to hear the parties on April 25, but in the meantime the Company issued misconduct slips to stewards who were considered to be violating the terms of the agreement. Later four stewards were suspended for six days and this culminated in a decision of the Union to call a meeting of all employees on April 20, which the Company interpreted as a stoppage of work.

There was a clause in the agreement which provided that if a strike occurred the agreement could be terminated immediately and pursuant to this provision the Company, immediately the stoppage of work above referred to took place, served notice on the Union that it considered the agreement at an end.

The Wartime Labour Relations Board (National) invited representatives of the Company and the Union to appear before the Board and for four days of the week of April 24 made an effort to conciliate the dispute. On Saturday, April 29, the Company and the Union accepted a proposal drafted by the Board. This provided for the bargaining representatives to apply for certification under the Wartime Labour Relations Regulations and to negotiate a new agreement with the Company. In the interim the parties would be governed by the terms of a proposal of settlement which included certain provisions of the old agreement.

It was an important condition of this proposal that the Wartime Labour Relations Board (National) would determine the procedure applying to representation and the settlement of grievances for the period during which the parties would be negotiating for a new contract, and that in the event of a dispute as to the interpretation or application of the provisions of the settlement or of the grievance procedure established by the

Board, it would be submitted to arbitration under the direction of the Board.

The Board submitted the grievance procedure to both parties on May 1 and immediately appointed Mr. Bernard Rose, K.C., Montreal, one of the senior Industrial Relations Officers of the Department of Labour, as an umpire to facilitate the application of the grievance procedure and the final adjustment of disputes arising in connection therewith, his decision to be final and binding on both parties.

On May 2 it developed that the Union objected to the grievance procedure as laid down by the Board and at a mass meeting decided on a further stoppage of work which became effective on midnight of that date.

Mr. Justice G. B. O'Connor, Mr. M. M. Maclean and Mr. Bernard Wilson, Chairman, Chief Executive Officer and Secretary, respectively, of the Wartime Labour Relations Board (National), visited Windsor on May 6 in order to deal with the dispute and to obtain information for the Board. On return to Ottawa, Mr. Justice O'Connor reported to the Wartime Labour Relations Board on the attitude of the parties as revealed by his visit.

On May 9 counsel for the parties were heard by the Board. After the hearing their representations were considered by the Board and a communication was addressed to them advising that the Board was not prepared to deal with a further clarification of the grievance procedure as long as the strike continued contrary to the Wartime Labour Relations Regulations, P.C. 1003.

Following a mass meeting of the employees at which this communication was submitted, the recommendation of the union executive that the men return to work next morning (May 11), on the understanding the Board would then proceed to clarify the grievance procedure, was accepted by the workers. The Board later dealt with the matter and its clarification was transmitted to counsel for the parties on May 12.

For reasons of health Mr. Bernard Rose, K.C., was unable to continue to act in this capacity of umpire and Mr. Louis Fine, Chief Conciliation Officer of the Ontario Department of Labour, was appointed by the Dominion Minister of Labour to succeed him.

Conciliation Work of the Industrial Relations Branch During May, 1944

DURING the month of May officers of the Industrial Relations Branch were called upon to handle 45 industrial disputes or controversial situations involving 13,114 workpeople employed in 49 different establishments. Of these 36 were new disputes which originated during the month while 9 were situations which had been unterminated as at April 30 and received further attention in May. They were dealt with under the provisions of the Conciliation and Labour Act.

Industrial Relations officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, N.B., and Sydney, N.S. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation service; two officers in Montreal are assigned to the Province of Quebec and two officers resident in Fredericton, N.B., and Sydney, N.S., represent the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Classified by industries, the 45 disputes occurred as follows:—

MINING:	
Coal mining	5
MANUFACTURING:	
Animal food products	3
Metal products	16
Textile clothing products, etc.	4
Wood products	2
Shipbuilding	7
Non-metallic minerals, chemicals, etc.	2
Rubber products	3
TRANSPORTATION:	
Steam railways	3

A statistical analysis of the nature of the disputes handled, their cause, disposition, etc., is given below:—

NATURE OF DISPUTE OR SITUATION:	
Strike	13
Threatened strike	4
Controversy	9
Arbitrations	6
Requests to conduct consent elections	10
Services of Commissioners	3
PREDOMINANT CAUSE OR OBJECT:	
Increase in wages	6
Reduced hours	2
Other causes affecting wages and working conditions	4
Recognition of Union	10

PREDOMINANT CAUSE OR OBJECT—*Con.*	
Discharge of workers for union activity or membership	5
Other union questions	2
Discharge of workers (*a*)	6
Employment of particular persons (*a*)	5
Unclassified	5
DISPOSITION:	
Strike terminated by mediation	9
Threatened strike averted by mediation	2
Decision rendered in arbitration	3
Election or vote conducted	8
Industrial Disputes Inquiry Commissioner appointed under P.C. 4020	2
Dispute lapsed or called off; no further action required	8
Referred to N.W.L.B. or R.W.L.B	2
Referred to Provincial authorities	4
Other disposition	1
Disposition Pending	6
RESULTS:	
In favour of employees	14
In favour of employer	7
Compromise or partially successful	6
Indefinite or unterminated	10
Not known	8
METHOD OF SETTLEMENT:	
Conciliation or mediation	13
Direct negotiations	4
Arbitration	4
Administrative action	6
Investigation only	3
Technical Services	8
Settlement Pending	7

(*a*) (Other than in connection with Union questions.)

Brief summaries of the cases of chief interest or importance are given below:—

Metal Workers, Montreal, P.Q.—During February, 1944, charges were made to the Department of Labour by a District Representative of the United Electrical Radio and Machine Workers of America that the Montreal Locomotive Works Limited, Montreal, P.Q., had dismissed nine employees because of their union membership and activities. The Company denied the charges, claiming that the dismissals were mainly due to a reorganization in the plant which was made necessary by the abolition of a third shift in the Tank Arsenal Division. Following a preliminary investigation by Mr. R. Trepanier, Industrial Relations Officer, Montreal, the Minister of Labour appointed His Honour Judge C. E. Guerin, of the Court of Sessions of Montreal, as an Industrial Disputes Inquiry Commissioner to conduct a formal investigation under the provisions of Order in Council P.C. 4020. The Commissioner found that three of the nine men had been dismissed because they favoured and belonged to the Union in question and recommended that the Minister of Labour should order their reinstatement. He was unable to find that the other six employees had been dismissed because of Union activities. Following receipt of the Commissioner's report, the Minister of Labour, on May 24, ordered the Company to re-employ the three men whom the Commissioner found had been discriminated against, requiring the Company to reinstate them in the same positions they were formerly engaged in, without loss of seniority or other rights, at no lesser rates of pay, and with reimbursement for wages lost.

Railway Employees, Quebec, P.Q.—On April 4, 1944, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees complained to the Department that certain of its members had been dismissed for union membership and activity, or demoted to lesser positions for the same reason, by the management of the Quebec Railway, Light and Power Company, Quebec City, P.Q. The Department assigned Mr. R. Trepanier, Industrial Relations Officer, Montreal, to make a preliminary inquiry and to try to adjust the case. When the Investigating Officer recommended that an Industrial Disputes Inquiry Commissioner should be appointed under Section 5 of Order in Council P.C. 4020, the Minister of Labour on May 12 appointed the Honourable Mr. Justice Oscar L. Boulanger of Quebec City to make a formal inquiry. Later the Company laid counter-charges that certain employees had been engaged in organizing a Union during working hours at the place of their employment and had used coercion and intimidation to induce another employee to join a trade union. Following a recommendation by the officer who conducted the preliminary investigation, the Commission of the Honourable Mr. Justice Boulanger was enlarged, early in June, to permit all the charges to be investigated at once.

Machine Workers, Longueuil, P.Q.—When a dispute between the Dominion Engineering Works Limited, Longueuil Plant, and Lodge 1596, International Association of Machinists, arose over the dismissal of an employee, allegedly in violation of their collective agreement, each of the parties named one person to act on an Arbitration Board, and under the terms of their Agreement requested the Minister of Labour to name a Chairman. The Committee was comprised of Mr. Bernard Rose, K.C., Montreal, Chairman, Mr. T. R. Ker, K.C., Counsel for the Company, representing the employer, and Mr. Adrien Villeneuve, Grand Lodge Representative of the International Association of Machinists, representing the local union. By a majority award, the Board of Arbitration decided that the employee in question had suffered discrimination, inasmuch as he had seniority over several other employees and equal qualifications, but had been among the first to be laid off, and that he had suffered prejudice largely as a result of the carrying out of his

duties in the matter of union administration and activity. It was recommended that the man should be immediately reinstated in his employment and paid his wages from the date of the expiry of his separation notice. A Minority Report was filed by the Arbitrator representing the Company but the award of the majority was accepted as final and binding.

Textile Workers, Cornwall, Ont.—Four employees in the Canada Mill of Canadian Cottons Limited, Cornwall, Ont., quit work on May 4, 1944, in protest against the manner in which they were treated by a section hand in the Napping Room. They resumed work the following afternoon, but quit again on May 8, when nothing had been done in regard to their complaints. This action was followed by a strike by some 750 employees in the Canada Mill. Later the same day the Stormont and Dundas Mills of the Company were also affected, making a total of approximately 1,460 on strike. The employees were members of Local No. 2, United Textile Workers of Canada. The Department of Labour learned of the situation on the morning of May 8. That evening Mr. J. P. Nicol, Industrial Relations Officer, Toronto, Ont., arrived in Cornwall, but unfortunately by that time the employees had held a mass meeting and voted not to return to work until the dispute was settled. The Company refused to enter into any discussions until the employees returned to work. After considerable difficulty, Mr. Nicol secured a signed agreement to the effect that work would be resumed on the morning of May 10, after which the dispute would be arbitrated. Both sides undertook to accept the decision of the arbitrator as final and binding, and the Company gave assurance that time lost during the work stoppage would not be counted as absenteeism in computing the production or efficiency bonus or in determining time allowed for vacation, subject to the approval of the Regional War Labour Board. Mr. Nicol heard evidence as arbitrator on May 10 and found that the section hand, while a first-rate workman, did not have the qualities of leadership or personality needed for a supervisory position. He recommended that the man be given another position, as nearly equivalent as possible to that of section hand, but not involving authority over other machine operators.

Shipyard Employees, Halifax, N.S.—When the management of Halifax Shipyards Limited, Halifax, N.S., instituted change in the method of distributing and collecting time-cards, representations were made to the Department that the custom and practice as to an accepted day's work had been altered in contravention of the Industrial Disputes Investigation Act and of the Wartime Labour Relations Regulations. Officials of Local No. 1, Industrial Union of Marine and Shipbuilding Workers of Canada, requested that the dispute be referred to a Board of Conciliation and Investigation under the Chairmanship of Mr. Justice J. L. Smiley, which was then dealing with certain other labour problems at the Shipyards. The situation was investigated by Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., who reported that it could not be held that the Company had changed the accepted hours of work which had been in effect by Agreement for a period of years. The Union was notified that the matter could not be referred to the Board of Conciliation and Investigation and that it could not be regarded as coming under the provisions of Order in Council, P.C. 1003.

Woodworkers, Saint John, N.B.—On May 15, 1944, an Officer of Local No. 2533, United Brotherhood of Carpenters and Joiners of America, called Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., advising him of a dispute between Canada Veneers, Limited, Saint John, N.B., and its employees over the dismissal of five employees for alleged refusal to accept employment in the log yard of the Company. Mr. Pettigrove communicated with the Union by letter, advising it as to its proper method of procedure under the Wartime Labour Relations Regulations (P.C. 1003), but before receipt of this letter a Union meeting was held which resulted in a strike by about 450 employees on the morning of May 16. During the day both Mr. Pettigrove and Mr. C. J. A. Hughes, Vice-Chairman of the Wartime Labour Relations Board for New Brunswick conferred with the president of the Union. The employees returned to work on May 17 and subsequently reached an agreement with the Wartime Labour Relations Board for New Brunswick whereby the Board would establish a grievance procedure for the final settlement of the dispute, which would be utilized by the employees.

Coal Miners, River Hebert, N.S.—About 135 employees of the Standard Coal Company, River Hebert, N.S., went on strike on May 30, 1944, over the refusal of the Company to re-employ, in a position on the surface, a former employee who had been released from the Armed Forces. The employee in question had gone into the Army some months before and his job on the surface had been filled by an older man who had served overseas for three years during the present war. The Com-

pany offered the younger man an underground job in the mine, which he refused. The employees, through Local Union No. 746, United Mine Workers of America, claimed that both men should be given jobs on the surface but the Company maintained that this was not possible and that, if the Union persisted in its demands, it would be necessary to discharge the older "returned" man. Mr. Allan MacDonald, Industrial Relations Officer, Glace Bay, N.S., acted as conciliator and persuaded the employee in question to take the position offered him in the mine, with the understanding that he would be given the first job available on the surface. This settlement was satisfactory to both the Company and the Union.

Rubber Workers, St. Jerome, P.Q.—Dissatisfaction with time standards on which wages were computed under the Company's "task and bonus system" gave rise to a strike on May 25, 1944, on the part of some 1,350 employees of the Dominion Rubber Company Limited, St. Jerome, P.Q. The employees were members of the Rubber Workers' Federal Union No. 144 (T.L.C.C.). During the day the Department was assured by a representative of the Trades and Labour Congress of Canada that the employees had agreed to resume work on the understanding that a federal conciliation officer would be sent to St. Jerome by Monday, May 29. However, when no solution of the dispute was reached at a meeting on the evening of May 25 between a union committee and representatives of the Company, the employees refused to return to work on the morning of May 26. Mr. Bernard Rose, K.C., a representative of the Department resident in Montreal, proceeded at once to St. Jerome where he conferred with representatives of the Company and the Union executive and attended a large mass meeting of the local union. The employees voted to resume work and did so on Monday, May 29. That day a conference was held in Montreal attended by officials of the Company and some 30 shop stewards and other union officials, with the Department of Labour represented by Mr. Bernard Rose and Mr. J. L. MacDougall, Industrial Relations Officer, Ottawa. Demands of the Union for the abolition of the "task and bonus system" and the inauguration of a straight piece-work system were flatly rejected by the Company. The Union representatives then made demands that the Company agree in writing to lower time standards in those departments where the majority of the employees were unable to attain an efficiency rating which would entitle them to obtain the premium or bonus. The Company contended that it could not agree to the demands as made, since they would involve a general wage increase, but undertook to re-study any time standards to which the Union objected and to check the general rate structures in the departments affected. The Company also insisted that any grievances should be dealt with under the procedure provided in the Collective Agreement between the parties and, failing satisfactory settlement thereof, should be arbitrated in accordance with the Wartime Labour Relations Regulations. These counter-proposals failed to satisfy the Union, and most of the Company's St. Jerome employees went on strike again on May 30th. The following day Mr. M. M. Maclean, Director of Industrial Relations, Ottawa, visited Montreal and convened a meeting of Company and Union representatives. He insisted that the grievances should be taken up in accordance with established collective bargaining procedure and got the parties to agree in writing to a formula under which, following resumption of work, the Company would meet immediately with the Union Negotiating Committee to review all time standards in the Fuel Cell, Shoe Room, and Sewing and Fitting Departments in an effort to adjust same so as to be acceptable to the employees concerned. A representative of the Union was to co-operate with the Company's time-study man in a review of the standards. If agreement was reached on changes which involved wage increases, the Company promised to make a joint application with the Union to the Regional War Labour Board for Quebec for adjustments retroactive to the time work was resumed, provided no further work stoppages occurred. The membership of the Union agreed to this solution at a mass meeting in St. Jerome on May 31, attended by Mr. R. Trepanier, Industrial Relations Officer, Montreal. Normal operations were resumed on June 1.

Union Representation Votes

Packinghouse Workers, Saskatoon, Sask.—On May 25, 1944, by joint consent of the parties a vote was conducted among employees of Intercontinental Pork Packers Ltd., Sas-

katoon, Sask., under the supervision of Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg. A total of 278 out of 331 workpeople who were entitled to vote cast their ballots. There were 251 votes cast for representation for collective bargaining purposes by Local No. 248, United Packinghouse Workers of America, while 22 votes were cast for a Plant Relations Committee, and there were 4 spoiled ballots.

Chemical Workers, Copper Cliff, Ont.—Pursuant to a joint request by the parties made to the Ontario Department of Labour, Mr. E. Perkins, Federal Industrial Relations Officer, Toronto, supervised a vote on May 3, 1944, among employees of Canadian Industries Limited at Copper Cliff, Ontario. There were 27 persons eligible to vote on the question "Do you wish to be represented by Sudbury Mine, Mill and Smelter Workers' Union, Local 598, as sole bargaining agent for the purpose of collective bargaining with Canadian Industries Limited, respecting Copper Cliff Works?" Twenty-three employees voted in favour of union representation and one against.

Metal Products Works, Sudbury, Ont.—On May 4, 1944, Mr. H. Perkins, Federal Industrial Relations Officer, Toronto, supervised a representation vote among employees of the Sudbury Construction and Machine Company Limited, Sudbury, Ontario, following a request made by the employees to the Department of Labour for Ontario which was concurred in by the Company. There were 39 persons eligible to vote, of whom 33 cast their ballots in favour of representation by Sudbury Mine, Mill and Smelter Workers' Union, Local No. 598, while two voted in opposition to union representation.

Metal Products Workers, Toronto, Ont.—By joint consent of the parties Mr. J. P. Nicol, Industrial Relations Officer, Toronto, conducted a vote on May 3, 1944, to ascertain the wishes of employees of the Turnbull Elevator Company, Toronto, Ont., in regard to representation for the purposes of collective bargaining with their employer. There were 261 workers eligible to vote and 230 participated in the balloting. A total of 133 voted in favour of the United Electrical Radio and Machine Workers of America as against 95 voting in favour of the employees Shop Committee. Two ballots were spoiled.

Textile Workers, Hanover, Ont.—On May 18, 1944, a representation vote took place by mutual consent of the parties among employees of Allen Brothers Company Limited, Hanover, Ontario. Out of 164 persons eligible to vote, 148 voted in favour of the Textile Workers' Organizing Committee, Local No. 20 (C.C.L.) and 12 voted against the Union. Mr. J. P. Nicol, Industrial Relations Officer, Toronto, acted as Returning Officer.

Dairy Workers, Ottawa, Ont.—With the joint consent of the parties a representation vote was conducted on May 31, 1944, under the supervision of Mr. F. MacKinnon, Industrial Relations Officer, Ottawa, among the employees of Central Dairies Limited, Ottawa. A total of 29 employees out of an eligible group of 39 voted in favour of collective bargaining through the National Union of Dairy Workers, Local No. 4 (C.C.L.). No votes were cast in opposition to union representation and one ballot was spoiled.

Metal Products Workers, Toronto, Ont.—A Union representation vote was conducted on May 22, 1944, among employees of Graham Nail and Wire Products, Ltd., Toronto, Ont., under the supervision of Mr. J. P. Nicol, Industrial Relations Officer, Toronto. All parties were in agreement in regard to the election. There were 100 employees eligible to vote and 96 cast their ballots. A total of 51 voted in favour of being represented by the Nail, Wire and Steel Rollers' Union, Federal Local 23651 (A.F.L.) as against 44 votes in favour of the Employees' Shop Council. There was one spoiled ballot.

Railway Employees, Lines in Canada.—During April and May a representation vote was conducted to determine whether the Yardmasters and Assistant Yardmasters employed by the Canadian Pacific Railway Company were in favour of bargaining with their employer through representatives of the Brotherhood of Railroad Trainmen. The vote was conducted by mail under the supervision of Mr. B. Rose, K.C., Montreal, as Returning Officer. There were 184 persons eligible to vote, of whom 147 cast their ballots. A total of 127 voted in favour of the Union and 20 were opposed.

Strikes and Lockouts in Canada during May, 1944

THE number of strikes and lockouts in existence in Canada for the month of May showed an increase of 15 as compared with the previous month but there were 15 less than in May, 1943. The number of workers involved and the resulting time loss in man-working days were greater than in the preceding month and in May, 1943. Preliminary figures show 25 strikes in existence for May, 1944, as compared with 10 in April, 1944, and 40 in May, 1943; the workers involved numbered 26,043 in May, 14,923 in April and 15,306 in May, 1943; and the time loss amounted to 128,422 man-working days in May, 126,609 in April and 47,229 in May, 1943.

Preliminary figures for the first five months of 1944 show a total of 88 strikes, with 45,481 workers involved and a time loss of 321,387 man-working days. For the same period last year there were 155 strikes on record, involving 78,661 workers and causing a time loss of 373,003 days.

During the month under review a strike of motor vehicle factory workers at Windsor, Ont., accounted for more than half the workers involved and over 85 per cent of the time loss. This strike, involving 14,000 workers, was carried over from April and 24 commenced during May. Of these 25 strikes, three resulted in favour of the workers, six in favour of the employers, four were compromise settlements and eleven were indefinite in result, work being resumed pending final settlement. At the end of the month there was one strike unterminated, namely, coal miners at River Hebert, N.S.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated.

* Preliminary.

† Strikes unterminated at the end of the previous year are included in these totals.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is seldom encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such strikes is maintained in the Department and the figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time, is frequently not received until some time after its commencement

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1944

Industry, occupation and locality	Number involved		Time loss in man-working days	Particulars†
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to May, 1944				
MANUFACTURING—				
Metal Products—				
Motor vehicle factory workers, Windsor, Ont.	1	14,000	112,000	Commenced April 20, 1944; *re* grievance procedure; terminated May 11; reference to Wartime Labour Relations Board (National); compromise.
Strikes and Lockouts Commencing during May, 1944				
MINING—				
Coal miners, Gardiner Mines, N.S.	1	53	53	Commenced May 5; *re* working conditions (dirty coal left on bottom); terminated May 5; return of workers; in favour of employer.
Coal miners, Coalburn, N.S.	1	100	100	Commenced May 8; against delay in payment of retroactive wage increase; terminated May 8; conciliation, federal; in favour of workers.
Coal miners (loaders), Glace Bay, N.S.	1	24	24	Commenced May 30; against proposed change in rate for cleaning off wall; terminated May 30; return of workers pending settlement; indefinite.
Coal miners, River Hebert, N.S.	1	135	270	Commenced May 30; for re-employment of an ex-serviceman at surface work; unterminated.
MANUFACTURING—				
Rubber and Its Products—				
Tire factory workers, New Toronto, Ont.	1	*(a)* 105	30	Commenced May 8; for adjustment of piece-rates for two operations; terminated May 8; return of workers pending settlement as provided in agreement; indefinite.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods

MONTREAL, QUEBEC.—CANADA PACKERS LIMITED AND THE MONTREAL PACKING PLANT EMPLOYEES FEDERAL UNION NO. 139 OF THE TRADES AND LABOUR CONGRESS OF CANADA.

Agreement to be in effect from May 11, 1944, to May 10, 1945, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for the employees. Neither the company nor the union will discriminate against or coerce any employee because of union membership or non-membership.

Hours: 10 per day, 54 per week, but providing similar action is taken by other meat packers, wholesale butchers and provision merchants in Montreal, the company will join the union in an application to the Regional War Labour Board for permission to pay overtime rates after 9 hours any day and 5 hours on Saturday. Overtime: time and one-half for overtime and for all work on Sundays and on six holidays, except shift workers working on Sundays who receive equivalent time off. Guaranteed time: under certain conditions, regular employees are guaranteed a 40-hour week.

Wages: the union agrees to accept the prevailing rates of all wages for all employees but the union reserves the right to make an application to the Regional War Labour Board for a revision of the wage scale. Vacation: one week annually with pay for 48 hours, after one year's service; two weeks after five years; three weeks after 15 years' service for female employees and after 20 years for male employees. Provision is made for seniority rights and for the settlement of grievances.

HULL, QUEBEC.—CANADA PACKERS LIMITED AND FEDERAL UNION NO. 92 OF THE TRADES AND LABOUR CONGRESS OF CANADA.

Agreement to be in effect from May 22, 1944, to May 21, 1945, and thereafter from year to year, subject to notice. This agreement is similar to the one summarized above for the Montreal packing plant of this company.

TORONTO, ONTARIO.—CANADA PACKERS LIMITED AND THE UNITED PACKINGHOUSE WORKERS OF AMERICA, LOCAL 114.

This agreement covers the employees of the Company's Harris and Gunns West Toronto plants, fertilizer and feed plants, public cold storage, wool pullery, Federal cold storage, soap works and west and east markets. It is to be in effect from June 21, 1943, to June 20, 1944, and thereafter from year to year subject to notice. The Company recognizes the union as the sole collective bargaining agency for the employees. The union is not to coerce employees to become union members.

Hours: 8½ per day Mondays through Thursdays, 9 hours on Fridays and 5 on Saturdays, a 48-hour week. Overtime is payable at time and one-half for time worked in excess of 9 hours Mondays to Fridays and 5 hours on Saturdays and for all time worked on Sundays and six holidays (except for shift workers who receive equivalent time off). Guaranteed time: under certain conditions, regular employees are guaranteed a 40-hour week.

Wages: the wage rates existing at the time the agreement was made are to continue in effect; in addition, subject to the approval of the Regional War Labour Board, the company agrees to pay to employees 5 cents per hour extra to be known as a special wartime premium. The cost-of-living bonus is to be paid in accordance with federal government Orders in Council. Vacations: one week's vacation annually, with pay for 48 hours, after one year's service; two weeks after 5 years' service; three weeks after 15 years' service for female employees and after 20 years' service for male employees. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Textiles and Clothing

MARYSVILLE, N.B.—CANADIAN COTTONS LIMITED AND UNITED TEXTILE WORKERS OF CANADA, NO. 16.

Agreement to be in effect from April 1, 1944, to April 1, 1945, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, March, 1943, p. 338, with these exceptions:—

The minimum wage rates are omitted but it is provided that current wage rates remain in effect, subject to 30 days' notice. Vacation: the company plans to grant to all of its eligible employees one week's vacation with pay.

Manufacturing: Pulp, Paper and Paper Products

HULL, QUEBEC.—E. B. EDDY CO. LTD. AND INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCALS 35 AND 43) AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 50).

Agreement to be in effect from May 1, 1944, to April 30, 1945, and thereafter from year to year subject to notice. The Company recognizes these unions as representing their membership. Any employee who is a member or who later becomes a member shall maintain such membership; new employees must join the union. When hiring new employees, the management will give preference to union members.

Hours: for tour workers, 8 per day, 48 per week; for day workers, 8 per day in most departments, 8¾ to 10 hours for certain other classes. Overtime: for tour workers, time and a half for all time worked on Sundays and holidays; for day workers, time and one-half for all overtime and for all work on Sundays and holidays. Grievance procedure is provided for.

Manufacturing: Shipbuilding

LAUZON, QUEBEC.—DAVIE SHIPBUILDING AND REPAIRING CO. LTD. AND BOILERMAKERS AND IRON SHIPBUILDERS UNION OF CANADA, LOCAL NO. 3.

Agreement to be in effect from July 2, 1943, to July 1, 1944, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for the employees unless some other organization demonstrates to the satisfaction of the federal Department of Labour that it represents the majority of employees involved.

Hours: 8 per day, 48 per week. Overtime is payable at time and one-half; work on Sundays and holidays at double time. The wage scale is not included in the agreement. Time and one-quarter for work on repairing ships recognized as dirty work.

Provisions for seniority rights and grievance procedure are included.

HAMILTON, ONTARIO. — CARTER-HALLS-ALDINGER CO. LTD. AND THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS AND IRON SHIP BUILDERS AND HELPERS AND OTHER UNIONS (PLUMBERS, CARPENTERS, PAINTERS, OPERATING ENGINEERS, MACHINISTS, SHEET METAL WORKERS AND LABOURERS) OF THE AMERICAN FEDERATION OF LABOUR.

Agreement to be in effect from September 20, 1943, to September 20, 1944, unless the contract for the operation of this ship fitting out yard is terminated sooner. The Company recognizes the unions as the representatives of the employees. All employees covered by the agreement shall become union members.

Hours: 8 per day, 48 per week. Overtime is payable at time and one-half; double time for work on Sundays and holidays.

Hourly wage rates for some classes: blacksmith 82½ cents, carpenters 95 cents, electricians 90 cents, electricians' improvers 71 to 80 cents, labourers 55 cents, machine hands 90 cents, truck and tractor drivers 55 to 60 cents, roll and press operators 82½ cents, punch and shears operators 70 cents, millwrights 85 cents, sheet metal workers $1, ship and engine fitters 85 cents, shipwrights 85 cents, steel erectors 90 cents, pipefitters and coppersmiths $1, painters 75 cents, spray painters 85 cents, plumbers 95 cents, riggers 75 cents, welders 90 cents and $1; improvers to nearly all above trades are 10 to 20 cents below the journeyman's rate; helpers are paid from 55 to 80 cents.

VANCOUVER, B.C.—WEST COAST SHIPBUILDERS LTD. AND UNITED WELDERS, CUTTERS AND HELPERS, LOCAL NO. 1.

Agreement to be in effect from May 15, 1944, to May 14, 1945, and to two months' notice. The union is recognized as long as it remains the certified bargaining representative of the employees. All employees who are members of the union or who later join the union must maintain their union membership.

Hours: 8 per day on first shift, 7½ on second shift and 7 hours on third shift. Overtime is payable at time and one-half for the first four hours and double time thereafter; double time for all work on Sundays and holidays. Time and one-quarter for dirty work and for work in places without efficient ventilation. Hourly wage rates, with the cost of living bonus added as of the date of this agreement: welders and burners $1, improvers 77 cents for one month, 90 cents for next three months, helpers 77 cents, journeyman leading hand $1.10, journeyman chargehand $1.10 to $1.20. Incentive bonus piece rate to be paid on a basis mutually agreeable to the parties. Second shift employees to receive 9 hours' pay for 7½ hours' work, third shift employees 9 hours' pay for 7 hours' work.

Vacation: all employees entitled to such annual vacations with pay as prescribed by the National War Labour Board. Grievance procedure is also provided for.

VANCOUVER, B.C.—HAMILTON BRIDGE WESTERN LTD. AND BOILERMAKERS AND IRON SHIPBUILDERS UNION OF CANADA, LOCAL NO. 1.

Agreement to be in effect from April 1, 1944, to March 21, 1945, and until two months' notice. The company recognizes the union as the representative of the employees as long as it remains the certified bargaining representative of the employees. Employees who are or who later become union members must maintain their membership.

Hours: 8 per day on first shift, 7½ on second shift and 7 hours on third shift. Overtime is payable at time and one-half for first four hours and double time thereafter; double time for all work on Sundays and nine specified holidays.

Hourly wage rates, with the cost of living bonus added: slab mechanic $1.10, spray painter $1.05; template, plater and layerout, bumper operator, press operator mechanic, rolls operator mechanic, chipper and caulker, driller, riveter, linerman, welder, burner, head storekeeper, fitter, expeditor, blacksmith, carpenter, $1; slab mechanic helpers 80 to 90 cents, improvers in several trades 77 cents for one month and 90 cents for next three months, brush painter 90 cents, overhead electric travelling crane 80 to 90 cents; table punchman 88 cents, punch and shearman 86 cents, holder-on 86 cents, storekeepers 85 cents, crane chaser lead hand 87 cents, steel checker 85 cents, furnace attendant 82 cents; reamer, countersinker and rivet heater, 80 cents; stores attendant 70 to 77 cents, steel racker and hooker-on 77 cents; labourer 60 cents; passer boy (under 21 years of age) 53 cents; mechanics' helpers 77 cents; journeyman leading hand 10 cents over journeyman's rate; journeyman chargehand 10 to 20 cents over journeyman's rate. Incentive bonus piece rate to be paid on a basis mutually agree-

able. Second shift employees to receive 9 hours' pay for 7½ hours' work; third shift employees 9 hours' pay for 7 hours' work. Time and one-quarter allowed for dirty work and work in confined places.

Construction: Buildings and Structures

REGINA, SASK.—REGINA BUILDERS' EXCHANGE AND THE BRICKLAYERS', MASONS' AND TILE SETTERS' UNION No. 1.

Agreement to be in effect from May 1, 1944, to May 1, 1945, and thereafter subject to notice. The shop steward elected on each job shall be recognized.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Overtime is payable at time and one-half between 5 p.m. and 7 p.m., all other overtime including all work on Saturday afternoon and on four holidays at double time.

Wages: The hourly rate for bricklayers and stonemasons, including cost of living bonus, is $1.26 per hour; foremen at least 10 cents per hour over regular rate. Apprentices: one apprentice allowed to each firm; not more than two apprentices on a job unless 20 or more bricklayers are employed on that job.

Collective Agreement Act, Quebec

Recent Proceedings under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and thirty days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, page 86. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the Act include the extension of two new agreements and the amendment of nine others, all of which are noted below. Requests for the amendment of the agreements for building trades at Quebec and Val d'Or and Amos were published May 20. Requests for amendments of the agreements for the corrugated paper box industry, men's and boys' clothing industry and the work glove industry throughout the province, and bakers, and clock-makers at Montreal were gazetted May 27.

In addition, Orders in Council were published in the *Quebec Official Gazette* during May approving or amending the constitution and by-laws of certain joint committees, and others approving the levy of assessments on the parties, or amending previous Orders in Council in this connection by certain other parity committees.

Manufacturing: Vegetable Foods, etc.

BAKERS, MONTREAL.

An Order in Council, dated May 2, and gazetted May 6, extends the previous Orders in Council for this trade (L.G., Oct., 1939, p. 1064; Sept., 1940, p. 970; Jan., 1941, p. 70, Feb., p. 183; Jan., 1942, p. 110, Mar., p. 352, Apr., p. 483; May, 1943, p. 639, Nov., p. 1529; Jan., 1944, p. 70, May, p. 637) to December 31, 1944.

Manufacturing: Fur and Leather Products

TANNERY INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated May 9, and gazetted May 13, amends the previous Orders in Council (L.G., March, 1940, p. 282; Feb., 1941, p. 183; Aug., p. 1008, Oct., p. 1313; March, 1942, p. 353, Sept., p. 1097, Dec., p. 1490; April, 1943, p. 489, Oct., p. 1381; March, 1944, p. 359) by adding two contracting parties to the agreement.

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL.

An Order in Council, dated May 17, and gazetted May 27, amends the previous Order in Council for this trade (L.G., May, 1944, p. 637). This amendment does not affect the summary already given.

Construction: Buildings and Structures

BUILDING TRADES, VAL D'OR AND AMOS.

An Order in Council, dated May 17, and gazetted May 27, amends the previous Orders in Council for this agreement (L.G., June, 1941, p. 704; Oct., p. 1315, Dec., p. 1573; March, 1942, p. 353; Feb., 1943, p. 220; March, 1944, p. 359). The agreement includes operations of all kinds pertaining to the construction, repairs, upkeep, installation and improvements of buildings, as well as road or bridge works. Permanent maintenance men in manufacturing or industrial establishments paid weekly, fortnightly or monthly shall not be governed by the decree.

Trade

HARDWARE AND PAINT STORES, QUEBEC.

An Order in Council, dated April 22, and gazetted May 6, amends the previous Orders in Council for these stores (L.G., April, 1940, p. 391, Dec., p. 1312, Jan., 1941, p. 70, June, p. 705; June, 1942, p. 739; Sept., p. 1097, Dec., p. 1490; Oct., 1943, p. 1381). Hours are from 8 a.m. to 6 p.m. on Monday to Friday inclusive and between 8 a.m. and 10 p.m. on Saturdays. Between December 18 and December 23, regular employees to work evenings without extra pay.

Minimum weekly wages including cost-of-living bonus: bookkeeper from $11.85 during first year to $22.45 after six years and $27.70 after nine years; sales clerk from $9.50 during first year to $20.95 after six years and $27.70 after nine years; clerk in receiving, shipping, unpacking, labelling and storing departments, from $11.85 during first year to $20.90 after six years and $23.50 after nine years; clerk (orders) from $11.85 during first two years to $21.40 after six years and $25.60 after nine years. One-half of the clerks in each of the above categories must receive the maximum wage rate; the other employees, after nine years, shall receive a wage rate equivalent to that of the eighth year of service until a vacancy occurs in the half of the employees receiving the maximum wage rate. Extra clerks to be paid 47 cents per hour; female employees, 21 cents per hour; skilled tradesmen performing general work $27.60 per week; unqualified workers $25.60 per week; junior employees and store and elevator boy $9.50 per week if under 21, $12.60 per week if over 21.

Other amendments do not affect the summary already given.

RETAIL FOOD STORES, QUEBEC.

An Order in Council, dated May 17, and gazetted May 20, makes obligatory the terms of an agreement between "La Section des Marchands de Produits alimentaires" of the Retail Merchants Association of Canada, Inc., District of Quebec; "La Section des Marchands de Levis" of the Retail Merchants Association of Canada, Inc., and L'Association patronale du Commerce de Québec and Le Syndicat National Catholique des Employés de l'Alimentation en Detail du District de Quebec and L'Union Fédérale des Bouchers et Coupeurs de Viande, local 77. This agreement to be in force from May 20, 1944, to February 28, 1945, and from year to year thereafter. The decree applies to Zone I—the City of Quebec and the town of Quebec-West; Zone II—the City of Levis and the town of Lauzon.

Hours: 56 hours per week. No payment of overtime to regular employees during Christmas time. Overtime is payable at time and one-half; double time on Sundays, holidays and for sales, counter or telephone work done by an employee outside the regular working week.

Minimum wage rates including cost-of-living bonus: All regular employees except messengers are divided into four classes: the proportion in each class is tabulated in the agreement; Class A, 48 cents in Zone I; 39 cents in Zone II; Class B, 38 cents in Zone I, 31 cents in Zone II; Class C, 28 cents in Zone I; 23 cents in Zone II; Class D, 23 cents in Zone I; 20 cents in Zone II. Messenger (with bicycle) 16 cents in Zone I, 13 cents in Zone II; messenger (without bicycle) 13 cents in Zone I, 11 cents in Zone II; temporary employee working a maximum of 30 hours per week, male, senior and skilled, 53 cents in Zone I, 43 cents in Zone II; male junior 24 cents in Zone I, 20 cents in Zone II; female, 31 cents in Zone I, 25 cents in Zone II.

Vacation: one week with pay after two years' service.

RETAIL STORES, BAKERIES, HOTELS, ETC., MAGOG.

An Order in Council, dated May 9, and gazetted May 13, amends the previous Orders in Council for this industry (L.G., Nov., 1940, p. 1203; Mar., 1941, p. 335; Aug., 1942, p. 978; Aug., 1943, p. 1131; Feb., 1944, p. 199). In commercial establishments hours are 59½ per week. In butcher shops, groceries, etc., the work week is 62 hours. Other amendments do not affect the summary already given.

Service: Public Administration

MUNICIPAL EMPLOYEES, JOLIETTE.

An Order in Council, dated May 9, and gazetted May 13, makes obligatory the terms of an agreement between the city of Joliette and "L'Association des Employés Municipaux de Joliette" local 141, and "L'Association des Policiers et Pompiers de Joliette." This agreement to be in effect May 13, 1944, to December 31, 1944, and year to year thereafter. The agreement applies to the employees of the police and fire departments, of the hydraulic system department and the department of the municipal services.

Hours: In police and fire departments all employees work two shifts of 11 hours on day shift and 13 hours on the night shift; a 56-hour week for employees in hydraulic system department; a 48-hour week for employees in all other departments. Overtime is payable at time and one-half for all work in excess of 48 hours and for work on Sundays and holidays. This does not include firemen, constables and employees of the hydraulic system.

Weekly wages: In police and fire departments, assistant chief, $30.19, captain $27.77, lieutenant $28.98, fireman enginemen $30.43, fireman inspector $26.62, fireman constable $26.62. In municipal services, electricians $22.34 to $32.84; garagemen 50 cents per hour to $30.19 per week; stores $20.79 to $27.90; watchman $21.73; specialized occupations, assistant general foreman-inspector of sewers, aqeducts, parks, roads $27.90, foreman street fountains $26.62, cement mixer operator 45 cents per hour, lawn mower operator 45 cents per hour; general service—roads and sanitary incineration 40 cents per hour to $26.62 per week; hydraulic system workers $27.90 to $32.97 per week.

Vacation: two weeks with pay for more than one year of service.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, THREE RIVERS.

An Order in Council, dated May 9, and gazetted May 13, amends the previous Orders in Council for these trades (L.G., March, 1942, p. 353, Sept., p. 1098; April, 1943, p. 490, Aug., p. 1131; May, 1944, p. 637). The amendment does not affect the summaries already given.

HAIRDRESSERS, MONTREAL.

An Order in Council, dated May 17, and published in the *Quebec Official Gazette* May 27, extends the term of this agreement (L.G., Oct., 1941, p. 1315, Dec., p. 1573; July, 1942, p. 857; Apr., 1943, p. 490, June, p. 813; Jan., 1944, p. 71) to June 7, 1944.

BARBERS AND HAIRDRESSERS, ROUYN AND NORANDA.

An Order in Council, dated May 17, and gazetted May 27, amends the previous Orders in Council for these trades (L.G., April, 1942, p. 484, July, p. 857) by providing for a 52-hour week. Other amendments do not affect the summaries previously given.

Canadian Vocational Training

WITH the beginning of April, 1944, War Emergency Training commenced the fifth year of its operation, but is now part of the broader program known as Canadian Vocational Training, which also includes projects carried on on a shareable basis with the Provincial Governments for Youth Training, Assistance to Students, Co-operative Apprenticeship Agreements with Provincial Governments, and any other form of post-war training which may be approved later by the Dominion Government.

From its inception up to April 30, 1944, the gross enrolment under War Emergency Training and assistance to students, has been as follows:—

Training in Industry	217,815
Army Tradesmen	41,080
Navy Tradesmen	7,586
R.C.A.F. Tradesmen	64,936
Rehabilitation (discharged persons from the forces)	3,264
Students	5,373
Total	340,054

Training for Industry and the Armed Forces

The enrolment during the month in all types of projects showed a very marked drop from the enrolment of previous months. This was particularly noticeable in the full-time pre-employment classes for industry and in the training for R.C.A.F. tradesmen. Apart from the Provinces of Ontario and Quebec, only a few dozen trainees were still enrolled in full-time pre-employment classes.

Following discussions with the Wartime Prices and Trade Board, an Order in Council was passed authorizing the extension of the facilities of the Training Program to industries engaged in essential civilian production as determined, from time to time, by the Wartime Prices and Trade Board. Up on that time assistance had been available only to industries engaged in actual war production.

Rehabilitation Training

More field representatives were added to the staff in the different provinces to assist the Regional Directors and the District Rehabilitation Boards of the Department of Pensions and National Health in arranging for the training of ex-service men and women in industrial and commercial establishments. The number of applicants in any one area for the type of training which can best be given in schools or training centres was so small that very few special classes for ex-service persons are actually in operation. About fifteen per cent of the enrolment are placed for training on the job in industry and the majority of the balance are being trained in private trade schools and business colleges or in regular War Emergency Training classes. Reports received from the different provinces, as well as personal visits by headquarters' representatives indicate that the happiest relations prevail between representatives of Canadian Vocational Training and the District Boards of the Department of Pensions and National Health.

Two additional Teacher Training classes for prospective instructors in rehabilitation work were opened during the month; one in Calgary for the three Prairie Provinces and one in Hamilton for instructors from Ontario, New Brunswick and Nova Scotia. A number of the graduates of the previous Teacher Training classes are now being used as field representatives until such time as there is sufficient demand for rehabilitation training classes to be established.

Costs of Program, 1943-44

The expenditures for the fiscal year ended March 31, 1944, showed a substantial reduction from the expenditures in the previous fiscal year due, in large part, to a marked reduction in the trainees in full-time pre-employment classes who were being paid weekly training allowances. The total payments made by the Dominion up to April 30, 1944, for the fiscal year, were approximately $4,530,000, as compared with payments of $6,115,000 for the fiscal year 1942-43. Under Schedule "K", which includes all types of industrial training, as well as training for the Army and the Navy, the gross cost per trained day in 1943-44 was 1.82, as compared with $2.03 in the previous year, due largely to a reduction in the amount of training allowances. On the other hand, the cost per trainee day, less expenditures for allowances and machinery, increased from $1.09 in 1942-43 to $1.14 in 1943-44, accounted for largely by an increase in the cost of instructors' salaries per trainee day. This, in turn, was due to a marked reduction in the enrolment in the average class. The gross cost of Schedule "G", training of R.C.A.F. tradesmen, decreased from $1.47 per trainee day to 81 cents. Most of this reduction was due to the R.C.A.F. having assumed payment of trainees' allowances instead of War Emergency Training paying them a weekly subsistence allowance as in the previous year. The cost per trainee day less allowances and machinery, for the training of Air Force Tradesmen, decreased from 82 cents in 1942-43 to 78 cents in 1943-44, accounted for by a reduction in general operating costs and expenditures for materials and supplies although the cost of instructors remained unchanged in the two fiscal years.

(1) Trainees in Part-time Classes consist largely of employed persons who are being given training at the request of employers in war production, who wish to up-grade their employees.

(2) Includes those graduates, who, though actually placed prior to April 30, 1944 were not so reported until after April 1, 1944.

(3) The numbers shown as completed, but not reported placed, in Province of Quebec (56) includes all unplaced Trainees, who have completed their courses since the commencement of the War Emergency Training Program (Canadian Vocational Training) in that Province.

Activities of the Unemployment Insurance Commission

New Ruling Affects Unemployment Insurance Contributions—Statistical Report on the Operation of the Unemployment Insurance Act for April, 1944

COMPENSATION paid by an employer to an employee, whether as payment in lieu of notice in the case of discharge or as a gratuity in the case of voluntary separation of an employee from his employment, will not in future be regarded as wages or salary in respect of which unemployment insurance contributions must be made, according to instructions sent out by the Unemployment Insurance Commission to its field officers across Canada. The instruction follows a ruling of the Department of Justice, which has interpreted the Unemployment Insurance Act to require contributions only in regard to earnings paid in relation to the period of time when a person is actually in employment.

At the same time the Commission has pointed out to its field officers that an employee will be deemed to be employed, for the purposes of the Act, on any day for which remuneration is paid while an employee is on leave, either as a vacation or on account of sickness, where leave is given in pursuance of the contract of employment between employer and employee.

In collecting contributions under the Act field officers are now instructed to observe these interpretations of the law.

Analysis of Unemployment Insurance Statistics, April, 1944

During April 6,463 applications for benefit payments under the Unemployment Insurance Act were filed in the local offices throughout Canada. This represents a considerable decrease from 10,667 registered in March and reflects, in part at least, the normal seasonal increase in employment during the spring as well as increased employment in certain war industries. During the same two months of last year a similar decrease in the number of claims filed occurred, 5,046 being registered in March and 3,953 in April.

As an indication of current unemployment in the insured population the number signing the "live unemployment register" is of greater signification than the number of claims filed. The number of claims records merely the number of persons who, during the period, became unemployed and applied for benefit. Many of these persons are placed in employment within a few days, so the monthly total of claims filed gives little indication of the extent of unemployment at any given time. Each claimant reports to the local office once a week on his days during the preceding week. So long as he remains unemployed and his benefit rights have not terminated for some reason, his claim remains live and he continues to report each week and to sign the live unemployment register. The number of persons signing the live unemployment register during the last six working days of April, then, represents the number of live claims in that week, i.e., the number who, during the week, reported unemployment days either as "waiting days" etc., or as days for which compensation should be paid. During the last working week in April, 12,053 persons signed the live unemployment register compared with 16,406 during the last week in March.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission showed that, as at April 1, 1944, there were 2,203,756 employees who were currently contributing to the fund, although a total of 3,172,617 were registered as contributors since the inception of the Act in 1941. The difference is accounted for by those who have joined the Armed Forces since 1941, those in seasonal employment, but not in employment at April 1, 1944, school students registered only during summer months, and those no longer in insurable employment.

Between April 1 and May 31, 1944, 74,439 new entrants to insurable employment were registered, making a total of 2,278,195 persons registered from April 1 to May 31, 1944.

As at May 31, 1944, 125,927 employers were registered as having insurable employees, the drop from 138,366 reported at April 1, is accounted for by summer seasonal firms, those that have ceased business or have no longer any insurable employees. The great majority of these latter were small employers employing less than 3 employees.

Outline of Industrial Welfare Service

The Industrial Welfare Society of Great Britain published an *Outline of Industrial Welfare and Personnel Management* in January, 1944. This is a revision of the Society's earlier pamphlet *Elements of Industrial Welfare and Personnel Management* issued in July, 1940, as a guide to firms undertaking this important work in wartime.

A personnel manager is considered essential for factories with 250 or more employees, and the establishment of a personnel and welfare department is recommended for large plants. It is pointed out in the instruction that a personnel officer "can only succeed in so far as the firm's personnel policy permeates *all* the activities of the business." The policy must be clearly formulated and the responsibilities of the personnel manager made known to all the other executives and to the workers' representatives.

The scope of a personnel officer's work is indicated by a tabulation of his functions under the headings, employment of workers, working conditions, industrial relations and outside welfare. His responsibilities in regard to accident prevention, introducing new employees to the factory, keeping personnel records and safeguarding the workers' health are outlined. Reference is made to the Society's comprehensive publications on *Health Services in Industry* issued in July, 1942, for more detailed suggestions on the organization of a factory medical service. Appendices include a select bibliography on legislation, employment, health, canteens, accident prevention, industrial relations and outside welfare, an annotated list of Government agencies and voluntary bodies concerned with industrial welfare and descriptions of actual personnel and welfare departments in five plants employing from 130 to 12,000 workers.

Unemployment Insurance, Element of Social Security

Summary of Address by L. J. Trottier, Chief Commissioner of the Unemployment Insurance Commission, Ottawa, Canada

UNEMPLOYMENT Insurance in its relation to social security was dealt with by Louis J. Trottier, Chief Commissioner of the Unemployment Insurance Commission, with headquarters at Ottawa, Canada, in a speech before the thirty-second annual convention of the International Association of Public Employment Services.

Mr. Trottier chose as the subject of his address "Unemployment Insurance, Element of Social Security". His purpose, he said, was to "better acquaint the public with what unemployment insurance represents and what it means to the country and to the workers particularly".

Unemployment Insurance is a permanent organization, he pointed out, but, on account of the exigencies of the war, it is administered together with the National Selective Service Civilian Regulations.

Mr. Trottier reviewed the history of unemployment insurance in various countries and described its progress in Canada. He defined the philosophical meaning of social security, and declaring that unemployment insurance was an integral part of social security, reviewed the principal characteristics and maintained that although unemployment insurance was compulsory, the dignity of the human being was preserved. He summed up the four statutory conditions which the applicant must fulfil in order to receive benefit. They are in substance: Payment of a certain number of contributions—application in prescribed form—capacity and availability for work and inability to obtain suitable employment—attendance at approved courses of training.

Mr. Trottier declared that the aim of unemployment insurance was to provide for the payment of benefit in the contingency of involuntary unemployment. "It has nothing in common with the system of direct relief," he said, and also pointed out that employers and employees were equally represented on the Commission, avoiding "the danger of developing into a bureaucracy or becoming an instrument of political influence".

After reviewing briefly the activities of the free Placement Service of the Unemployment Insurance Commission, Mr. Trottier emphasized that it did not interfere with the right of labour to organize freely, that it provided for handicapped persons, war veterans, and afforded free vocational training. 240 local offices and 5,400 officers are administering the Act, which affects more than 2½ million wage earners.

Mr. Trottier then went on to describe the internal organization of the Commission, the mode of administration of the unemployment insurance scheme through contributions paid by employers and employees in practically equal proportion. He reviewed the actuarial principles on which the payment of contributions as well as benefits rests. Quoting official figures, he stated that as at February 29, 1944, the Unemployment Insurance Fund had to its credit $182,613,628 and that since its inception $1,711,444 was paid as benefits. Such a reserve was maintained in order to take care of any possible large scale unemployment. For the purposes of unemployment insurance, Canada is divided into five regions: Maritimes, Quebec, Ontario, Prairies and Pacific, so that regional problems may be disposed of by people who are conversant with local or regional conditions.

In concluding, Mr. Trottier paid a deserved tribute to the staff of the Unemployment Insurance Commission for its efforts and efficient work during these troubled days of war, and summed up his address in the five following points: That unemployment insurance has refrained from invading the field of private enterprise; that it does not constitute state paternalism distributing allowances for direct relief; that it does not touch questions of education or family matters concerning only the provinces, save by way of auxiliary technical help in some cases; that it encourages initiative and individual enterprise, refusing insurance benefits to voluntary idleness, and, finally, that it tends to provide social security for all members of society.

Employment and Unemployment

Summary

INFORMATION in this section regarding the employment situation in Canada is based upon reports from the following sources:—

The employment situation at the beginning of April, as reported by employers.—The Dominion Bureau of Statistics receives each month reports from firms employing fifteen or more employees. These firms represent practically all industries except agriculture, fishing, hunting and highly specialized business operations.

The Bureau has been receiving these reports for many years; hence, although the figures given show considerably less than the total number of persons employed in Canada, they give a valid picture of the trend of employment over a period of years.

A continued curtailment in industrial employment was indicated at the beginning of April, according to returns tabulated from 14,447 firms whose employees numbered 1,817,600, compared with 1,829,857* at March 1. This was a reduction of 12,257 persons or 0·7 per cent.

The index number of employment (based on the 1926 average as 100) was 180·5 as compared with 181·7* in the preceding month and was 0·1 per cent lower than at April 1, 1943.

Incorporated in the monthly article is information concerning payrolls, which is furnished by the co-operating firms. The per capita average weekly wage of $32.33 showed an increase from that of $32.27* at the beginning of March, while at April 1, 1943, the figure was $30.94.

Report on employment conditions for May.—A summary of employment conditions for the month of May has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service Offices across Canada. These reports describe employment conditions in the Maritime, Quebec, Ontario, Prairie and Pacific Regions.

*Revised

Applications for employment; vacancies, and placements, April, 1944.—From the Employment and Selective Service Offices of the Unemployment Insurance Commission come reports showing the number of positions reported as vacant across the Dominion, together with the number of applications for employment and the number of placements effected.

Reports received from the Employment and Selective Service Offices of the Unemployment Insurance Commission during the four-week period March 31, to April 27, 1944, reported a slight increase in the daily average of placements in employment when compared with the previous four weeks March 3 to March 30, and a nominal decrease in comparison with the four weeks April 2 to April 29, 1943. With the exception of a decline in logging, all industrial groups showed gains in placements under the first comparison and all industrial divisions apart from forestry and logging, public utilities and trade recorded losses over the four weeks in April last year, the most pronounced being in manufacturing and construction. During the four weeks under review there were 225,624 vacancies reported, 179,911 applications for employment and 125,026 placements effected in regular and casual employment.

Unemployment in trade unions.—The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed during the period under review.

The statistical article summing up the information contained in these reports, formerly run monthly in the LABOUR GAZETTE, is now appearing quarterly. The last quarterly article was published in the May issue.

Unemployment as reported by the Unemployment Insurance Commission.—In the article *Activities of the Unemployment Insurance Commission* appears each month a statement showing the number of claims made for unemployment insurance benefit.

During April, 1944, 6,463 persons made claim for benefit, as compared with 10,667 in March, 1944, and 3,953 in April, 1943.

The Employment Situation at the Beginning of April, 1944, as Reported by Employers

INDUSTRIAL employment showed curtailment at the beginning of April, in conformity with the trend in 19 of the previous 23 years of the record. The general decline, which was rather below-average in extent, took place largely in manufacturing, logging and construction, from which some 5,300, 8,900 and 4,400 persons, respectively, were released by the co-operating firms. Coal mining also was quieter. The loss in manufacturing as a whole was contra-seasonal, the second in succession of the kind; there was a falling-off in the production of both durable and non-durable manufactured goods. Heightened activity was indicated in the remaining industrial groups, the greatest expansion being in transportation and trade, with smaller additions in communications and services. The general increases, however, like the decreases, were not on a large scale; the gain of 3,050 workers in trade was the greatest. A contraction in industrial activity had also been noted at April 1, 1943, but the loss then recorded was somewhat smaller. For the first time since the early part of 1939, employment at the date under review was below its level of 12 months earlier. With the exception of April 1, 1943, however, the latest index was higher than at that date in any other year.

Data were tabulated by the Dominion Bureau of Statistics from 14,447 firms, whose employees numbered 1,817,600* at April 1;

*Sex Distribution of the Persons in Recorded Employment at Apr. 1, 1944.

This total of 1,817,600 was made up of 1,343,618 males and 473,982 females, the latter constituting 261 per thousand employees of both sexes in the eight leading industries. This proportion of women workers was somewhat higher than that of 253 per thousand indicated at Oct. 1, 1943.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

compared with 1,829,857 at the beginning of March, this was a reduction of 12,257 persons, or 0·7 per cent. The weekly payrolls distributed by these establishments amounted to $58,766,821, being less by $280,290, or 0·5 per cent, than the disbursements they had reported at March 1. The general per capita weekly earnings rose from $32.27 at that date, to a new high of $32.33 at April 1. The April 1, 1943, average had been $31.14, and that at April 1, 1942, $28.41.

The shrinkage in employment at the date under review lowered the crude index (based on the 1926 average as 100) from 181·7 in the preceding report, to 180·5 at April 1, as compared with 180·6 at the beginning of April in 1943. Since then, there has been a very slight loss in employment, accompanied by a rise of three per cent in the aggregate weekly payrolls. As already stated, the percentage decrease in employment between March 1 and April 1, 1944, was rather less-than-average according to the experience of past years, so that the seasonally-adjusted index showed an upward movement, advancing from 189·3 at the former, to 191·2 at the date under review.

Payrolls

The weekly payrolls reported at April 1 by the firms furnishing statistics in eight leading industries aggregated $58,766,821, as compared with $59,047,111 distributed on or about March 1. The decrease amounted to 0·5 per cent. The weekly average earnings of the typical individual in recorded employment, however, rose from their previous maximum of $32.27 at March 1, to $32.33 at the date under review, when the sum was $1.19 higher than that at April 1, 1943, and $3.92 above the April 1, 1942, figure.

April 1	118·1	148·4	32·33	134·2	171·4	33·22

Including the figures for financial institutions, the most recent survey shows that the total number of persons in recorded employment in the nine leading industrial groups was 1,882,322, as compared with 1,894,806 at the beginning of March. The weekly payrolls of these workers totalled $60,866,570 at April 1, as compared with $61,120,385 in the preceding report. The per capita average for the nine main industries, including finance, was $32.34, as compared with $32.26 at the beginning of March, and $31.13 at April 1, 1943. In the months since then, the number in recorded employment in the nine leading industries has shown practically no general change, but there has been an advance of 3·2 per cent in the reported salaries and wages.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the eight leading industrial cities, and gives comparisons as at March 1, 1944, and April 1, 1943.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have

been converted from their original base, 1926=100, to June 1, 1941, as 100. The report indicates that in the period for which data are available, the number of persons in recorded employment in the eight leading industrial groups has shown an increase of 18·1 per cent, while the aggregate weekly earnings of these workers are higher by 48·4 per cent. Including finance, the gain in employment from June 1, 1941, to April 1, 1944, amounted to 17·6 per cent, and that in payrolls, to 47·3 per cent. The explanation previously given for the much greater rise in the reported salaries and wages than in employment during the period of observation may again be stated:— (1) the concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work; (2) the payment of cost-of-living bonuses to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their incorporation in the basic wage rates as from February 15, 1944, and (3) the progressive up-grading of employees as they gain experience in their work. In a considerable number of cases, higher wage-rates have also been granted.

The effect of wartime demand for manufactured commodities is seen in the growth in employment and payrolls in factories, which in the period since the institution of the payroll statistics has greatly exceeded the gain in the non-manufacturing industries; the index of employment in the former has risen by almost 34·2 per cent from June 1, 1941, and that of payrolls by 71·4 per cent. The weekly earnings of the typical individual engaged in factory work have increased by practically 29·9 per cent, while the all-industries' average has risen by 28·0 per cent. The factors given above as influencing the general trends have had an even greater influence in the case of manufacturing.

The expansion in employment and payrolls in the production of durable goods has been particularly noteworthy in the months for which data are available; in this class, the index of employment shows a gain of 54·7 per cent, accompanied by an increase of 101·1 per cent in the salaries and wages distributed in the period from June 1, 1941, to April 1, 1944. In the non-durable manufactured goods, the index number of employment at the latter date was higher by 15·8 per cent than that indicated at June 1, 1941, since when there has been an increase of 41·3 per cent in the

Note.—The "Relative Weight" as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

payrolls disbursed by the co-operating establishments.

With regard to the marked variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of paramount importance.

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employee reported in Canada by the firms making returns at the date under review.

Report on Employment Conditions for May, 1944

The following summary of employment conditions for the month of May has been prepared by the Research and Statistics Branch, Department of Labour, on the basis of reports received from Local Employment and Selective Service offices across Canada.

THE total net labour demand of Canadian industry, as of May 25, called for 175,000 additional workers, of whom 50,000 were women. The summary of employment conditions for the month of May presents a picture of the manner in which this shortage of manpower is affecting war production and essential industry in all parts of the Dominion.

The greatest need is for workers (women, for the most part) to participate in the huge shell production program now under way from coast to coast. The resources of local and regional offices alike are being taxed to supply the thousands of workers requisite for the task, and Ontario factories are possibly the most exigent in their demand for this labour. Still another urgent call for female helpers has gone out from Canada's hospitals and sanitoria, hard pressed to maintain minimum staffs.

Maritime Region

Agriculture—Although seeding is well advanced in most parts of the maritime provinces, with every promise of a good season ahead, agriculture is still calling for more workers for immediate tasks such as property and equipment repairs. The regional office is acting in the closest co-operation with the various provincial Departments of Agriculture in the endeavour to procure the necessary supply of labour.

In the Bridgewater area of Nova Scotia the considerable number of farmers and farm labour rejectees are fully occupied either on their own farms or on full time work for other agriculturists of the area. Throughout the district many men whose services are needed at home for the busy seasons are working between times in local industries, but a number of local offices report that as the farmers do not always apply for help through National Selective Service channels, it is difficult to gauge the extent of the current labour demand with accuracy.

Logging—Low water in the rivers has seriously hampered the logging drive, delaying the completion of this work. If rain does not alleviate the condition, there will be difficulty in bringing out pulpwood in the smaller streams of the region. In the Campbellton area some 1,200 to 1,500 men are employed on the drive, and will be occupied for another week, after which they will return to the land or be directed to industry. St. Stephen is still calling for many additional fuelwood and pulpwood cutters, but few applicants are to be found.

Sawmills—Production in the maritime sawmills has begun, and the scarcity of experienced workers is general throughout the region. The exodus of men to the farms is largely responsible for the increase in unfilled orders, which continue to mount as the mills get into full swing.

Mining—No notable change has occurred in the mining industry during the month. While the shortage of certified miners persists (New Glasgow's vacancies, for instance, total some 80 skilled men and 35 labourers), the mines are all able to carry on steady production.

Manufacturing—In the manufacturing industries, the labour requirements of the meat packing and fertilizer plants are receiving first consideration until their pressing seasonal need is satisfied. Textile factories, too, are suffering from a dearth of female workers. Fredericton, St. Stephen and Truro are especially exigent in their demand, and the increasing need of girl employees in maritime industries has made it necessary to cancel present orders in clearance from Ontario and Quebec firms.

As the new shell program gets under way, additional orders are being placed and it is anticipated that these will increase as production proceeds.

The call for shipbuilding workers is also pressing. The shipyards at Bridgewater and Mahone Bay are continuingly handicapped by the lack of a substantial number of carpenters and labourers: only a few are available locally, and there has been slight response to orders in clearance in Ontario and Quebec.

At Charlottetown the naval refitting of a mine sweeper has proved more extensive than anticipated, and the large layoff expected at the yard has not materialized. The Halifax Shipyards continue to report a large number of vacancies for first-class workmen, but their need for labourers has been met for the present, and orders for improvers and helpers have been cancelled. H.M.C. Dockyard is similarly short of skilled tradesmen of all kinds, as well as 107 labourers, and the shortage of labourers for the barge building project at Fredericton has not been relieved.

Construction—As the season advances, construction is making heavier demands on the labour market, with the call for skilled carpenters, brick-layers, etc., especially high in

the Halifax area, and very few coming in on clearance. About 100 carpenters and 250 labourers are required for high priority construction in the seaport city, and in addition there are 50 orders on file for carpenters for lower priority projects, chiefly private homes. Bricklayers and helpers are in demand for the completion of the gas plant of the Nova Scotia Light and Power Company, and it is also difficult to satisfy the requirements of Charlottetown contractors.

In New Brunswick, Moncton and Saint John alike report that construction is seriously handicapped by the lack of general labour. A marked decrease is noted in the number of applicants for such work, and many seemingly suitable labourers have been found absolutely unfit on medical examination.

Transportation—The labour outlook for transportation has not improved during the past month. The railways' orders for track maintenance gangs are not yet satisfactorily filled, but it is expected that the completion of the river drives will release several hundred men, of whom a goodly number should be available for this work. At Halifax there are still shortages at the Reserve Labour Pool and some 200 men could be placed to advantage.

Quebec Region

Agriculture—With spring seeding well under way throughout Quebec, except in the colder Lake St. John area, agriculture continues to call for farm help which is difficult to supply. In the neighbourhood of Levis the lack of proper equipment is the most serious deterrent to agricultural activity, and the local farmers are sharing their implements in order to overcome this handicap. Plessisville has succeeded in filling its immediate needs with the assistance of the agricultural production committee of the area, but Ste. Anne de Bellevue reports that there are no local workers available to overcome its existing shortage.

In the Sherbrooke area a few of the many outstanding agricultural orders have been filled, but with difficulty, and the situation later may be serious. At Port Alfred some 130 farmers are still engaged on the river drive, but as sowing in that vicinity is just beginning there is no urgency for their return to the land.

Logging.—There is as yet no sign of easement in the labour demands of the logging industry. A late spring freeze-up in the Lake St. John country delayed the spring drives, which are finally under way. Some 307 drivers were placed in the Port Alfred area lately, and at Chicoutimi, 356 bushmen are still engaged in cutting, and another 1,022 on the drive and river improvements. At Jonquiere the recruiting of men still required is going slowly, and Roberval reports that only 1,000 men have been secured of the necessary 2,000 for the short driving season.

La Tuque and Shawinigan are calling for 250 skilled men for sorting, work which is both strenuous and dangerous, and farther west, where the drive is in full swing, Rouyn requires a further complement of 150, as well as another 200 for the summer camps now in operation. Val d'Or requires an additional 200 bushmen immediately, and expects to need a much larger number later.

South of the St. Lawrence, the river drives are drawing to a close, with the exception of the Causapscal section where unfavourable river conditions are holding up operations.

Sawmills.—As activity quickens in the region's sawmills, the seasonal labour demands have risen steadily. For the most part the mills are operating without a full quota of workers but the shortage is not especially acute. Rouyn is the most exigent in its requirements, with a shortage of 75 skilled workers of various types for the larger mills, and East Angus and Lachute also need recruits for the industry.

Mining.—The difficulty of replacing men returned to the land has augmented the problem of procuring workers in the mines. Production at the chrome mine in the Richmond area has been seriously curtailed by the agricultural exodus, and muckers and machine men are urgently needed. At Buckingham, output is continuing at steady level, but with a shortage of workers, and St. Jerome is calling for surface miners and general labour. Exploratory operations continue in the Rouyn section, where 100 diamond drillers, 80 helpers, cooks and woodcutters are still needed. During the period the Siscoe Mine at Montauban-les-Mines ceased operations, and 183 men were laid off: the majority of these were farmers, bushmen and labourers residing in the vicinity.

Manufacturing.—As the region's manufacturing centre, Montreal is most vitally affected by the steadily mounting demand for manpower in essential war plants and industry of all kinds. Heavy demands for aircraft workers will be partially met, at least, by a lay-off in one of the local airplane plants, but the call for women volunteers for vital shell filling programs is meeting with little response.

No headway is being made in remedying the serious shortage in Montreal's packing plants, where the present labour supply is merely covering the wastage, and current demands cannot be met. As a result of the exodus to agriculture, to the wharves and the

lake boats, the shortage of labourers in warehouses, foundries, strip mills and other industries has reached the highest recorded point.

In other parts of the province the manpower outlook is correspondingly difficult. Heavy labour for foundries, etc., is still much needed in most districts, and there is a continuing call for a large number of potmen for the aluminum plants. Ste. Therese reports heavy demand for munitions workers, and at Valleyfield increased shell production has resulted in the placing of clearance orders for 200 men and 100 women.

As in Montreal, the call for female employees predominates throughout the region. At Coaticook, the need for unskilled girls has grown still further: orders in first and second zone clearance have been unsuccessful so far, and advertisements in local newspapers are being tried. Drummondville is calling for women to work on a new war contract, and the local rubber company is greatly in need of them for its night shift. At Three Rivers, increased industrial activity has resulted in heavy orders for local factories. The Quebec tobacco factories are also calling for young girls, who are hard to obtain because the arsenals are again taking on new staff, in addition to re-engaging former employees.

Construction.—Although few really large construction projects are in progress in the Quebec region, nearly all the available building tradesmen and labourers throughout the province have been absorbed. In Montreal private housing and repairs are utilizing the services of practically all construction workmen. In the Chicoutimi area the number of men on Unemployment Insurance benefit has dropped to 200, most of whom are being despatched on clearance to other regions, while the remainder will find work locally during the summer months.

In the vicinity of LaTuque, contractors are calling unavailingly for carpenters and labourers for construction work, and will have to look to other districts for the complement required. At Sherbrooke all the carpenters and electricians available locally and in the first zone are being absorbed on a new plant construction, thus creating a shortage of workmen for private projects.

Transportation.—Transportation's most pressing problem continues to be the recruiting of railway maintenance gangs, but the result of a concerted effort to supply these is discouraging. In Montreal, freight handling also is giving the railways grave concern, and the airlines and Transport Command at Dorval are suffering from a lack of repair mechanics, many of whom are working as artisans in garages.

Ontario Region

Agriculture.—Agricultural work is progressing favourably in most sections of the province, with seeding nearing completion except in such districts as Welland, Stratford and Fergus, where continued wet weather will retard low-lying land seeding about two weeks. In the vicinity of Wallaceburg power equipment has enabled the farmers to finish their early work expeditiously, and they are now applying for permission to enter industry: permits have been granted farm hands to work at the sugar refinery on a day-to-day basis.

However, on the whole, the need for assistance on the land remains pressing. From the majority of local offices comes the report of many vacancies, especially in such districts as Welland, where vegetable growers are very anxious to secure help from high school students for transplanting, and Belleville, where there is immediate need of assistants in the setting out of some 2,000,000 tomato plants for cannery crops. At Chatham, the first group of prisoners of war has arrived, and is available for field work as soon as the beets are ready for blocking and thinning. In fruit and vegetable areas the close of school will be welcomed by hard-pressed agriculturalists, and already schoolboys are being placed in some localities.

Logging.—The call for loggers for the river drive is diminishing as the season draws toward a close, and the current demand is for pulpwood cutters to man the summer camps. Transfer of bushmen from the drive to cutting operations is helping materially to satisfy the labour need, and orders are dwindling in consequence. While camps at Timmins could use many more men, and Peterborough is unable to meet the continued demand, the over-all shortage is not extreme.

Sawmills.—The sawmills of the region are more insistent in their call for manpower, and no district engaged in this industry reports a full complement of workers. In the North Bay area some 40 mills are trying to operate with part staffs and inexperienced personnel, and 50 per cent of the current permits being issued in the vicinity are for sawmilling. Some 300 additional workers are needed for the Sudbury operations, and Pembroke and Perth are also calling for reinforcements. Sturgeon Falls seems to be fully satisfied with its current labour situation, and surplus mill hands from that vicinity are being placed outside.

Mining—Little change is noted in mining's labour demands, the general shortage of men for actual mining operations continuing without abatement. While mines in the Timmins

district are managing to produce to approximately the same capacity in spite of the manpower deficiency, Sudbury's efforts to procure miners have proved fruitless, and mining and smelting companies there will be forced to curtail production if no remedy is forthcoming in the near future.

Manufacturing—With skilled and semi-skilled men needed in all branches of manufacturing endeavour, local offices in all parts of Ontario are hard-pressed to meet the mounting demand. No improvement is noticeable insofar as heavy labour is concerned, and every industry employing this type of labour, in whatever industrial centre, is suffering proportionately.

The year-round call for workers of both sexes for the textile mills cannot be met, and the seasonal needs of the packing plants and canneries are adding considerably to the strain on the already over-taxed labour pool of the region. At Leamington one food processing company estimates its needs for the current year at approximately 1,500 workers additional to the present large staff—double last year's requirements—as the pack of tomatoes will be much higher than usual. At Trenton the beginning of pea canning about June 20 will require 400 to 500 men and women workers on full and part time, and the Collingwood canneries, recently re-opened, are employing a large number of women and placing orders for many more.

Wherever shell contracts have been placed with Ontario factories, orders for workers are taxing the local office labour resources to their limit. The munitions plant at Oshawa, with an increased shell program, has stepped up its order to 800 women, required before the end of August, and these must be brought in from outside points. Toronto's shell and radio factories are calling for hundreds of female helpers, Wallaceburg's munition plants have placed orders for approximately 200 women and an equal number of men, and in Welland renewal of shell contracts has created a demand for an additional 330 female and 65 male employees; the Welland orders will be spread over a 6-weeks period, at the rate of absorption of 50 to 60 weekly, and there is a further call for 125 women shell inspectors within the next six weeks for the Inspection Board of the United Kingdom and Canada. All of these requirements will be difficult to fill.

The staff reduction at Central Aircraft in London has relieved the local labour stringency to some extent, supplying Toronto war plants with a number of experienced workers. The women laid off in many cases are taking the summer to rest, but some of them are being referred to the needy textile mills. The recent lay-off of 150 from the Toronto shipyards helped to meet the demands of other war production, but such small releases are of slight benefit.

The Ford Motors dispute at Windsor having been settled, practically all employees are back at work, and the approximately 1,500 personnel of affected feeder plants have also returned to their jobs. Some 58 employees of Canadian Bridge, released recently, were transferred directly to other essential industries, and no difficulty is experienced in placing the many university students arriving in Windsor from all parts of the Dominion.

Construction—Construction throughout the province is not as yet sufficiently advanced to require skilled tradesmen, and the greatest demand is for general labour. In Gananoque, a $150,000 housing plan will be begun early in June, and construction labourers and carpenters are required for the project. At Ingersoll, new bridge building at the quarries calls for rough carpenters, labourers and cement men, and at Kingston the building of a new Canada Steamships warehouse will absorb all available local labour. The greatest shortage in the industry exists at Port Colborne, where only 10 per cent of the labour required for the erection of storage silos can be procured, and in consequence the work may have to be called off.

Transportation—The urgency of transportation labour needs continues acute. Local officials of the railways are pressing daily for machinists, boilermakers and labourers for track maintenance gangs, and the transport companies need mechanics to keep their rolling stock in condition. The lake boats are well supplied on the whole, but the ferry boats at Cobourg are still looking for coal-passers and deck hands.

Prairie Region

Agriculture—With the completion of the seeding in Manitoba and the eastern parts of the prairie region, calls for agricultural labour are steadily declining, and many farm workers are taking temporary employment in packing plants and mines, or on railway maintenance gangs. Seeding in Saskatchewan and Alberta is not so far advanced, however, and an urgent need for helpers is still registered in some sections. Moose Jaw, with 90 unfilled orders of which only the most pressing can be filled, reports that the local farmers are carrying on with the limited help available by exchanging with their neighbours, running outfits at night, etc., and Regina has practically the same number of unfilled vacancies.

The heaviest demand is anticipated for the haying season in July and the threshing in

August. In the meantime, farmers are overcoming the shortage to some extent by co-operative effort, and the general situation at present is not acute, although the irrigation areas of Alberta are still seriously handicapped by lack of labour for beet work and other canning crops.

Logging—The spring logging drive is well under way, and bush operations in many parts of the region are slowing down. The greatest need for labour in this industry is recorded at the Lakehead, where the year-round demands of contractors must be met. Port Arthur reports that to the lack of pulpwood cutters and the impossibility of cutting enough wood to maintain mill operations and export requirements, is now added a new threat to the future of the industry in the district—a spruce budworm blight which has attacked over 3,000 square miles of the Nipigon forest area.

Sawmills—There is a persisting demand for sawmilling labour, but this is not so great as earlier in the season. One mill at The Pas is operating satisfactorily on a single shift basis, as the combination of two shifts has provided enough key men for efficient production, and by continuing sawing operations later in the fall most of the winter's wood supply can be cut. With lakes and rivers open, Flin Flon is calling for more workers, and in the Edmonton area 85 could be placed if available. Forest fires in the northwestern part of that district are still bad and one large stand of virgin timber has been destroyed.

Coal Mines—No great change is noted in the labour situation insofar as the region's coal mines are concerned. Estevan reports that the number of men now actually working in the lignite field is very small but in the Drumheller area ten mines have returned to a 6-day week, and labour is once more in demand. At Blairmore the need for unskilled workers in the bituminous and sub-bituminous mines is assuming greater proportions; production has been further lowered during the past two months and replacements for the agricultural workers have not been available. Generally speaking, there are sufficient certified miners in the area, although more could be used, if procurable. At Lethbridge the two largest mines are operating practically full time and there are enough miners in the vicinity to take care of any immediate vacancies. The majority of the mines in the neighbourhood of Edmonton are in steady production, with a nominal demand for miners which is unlikely to increase for some time.

Base Metal Mines—Shortage of miners continues to hamper production in the region's base metal mines. The three Flin Flon operations are calling urgently for miners, helpers, electricians and machinists, and additional labourers and carpenters are requested for the Steep Rock iron mines. Kenora's gold mines are short of workers of all kinds, but Port Arthur reports that in spite of the difficulty of maintaining a sufficient underground staff to carry on developments economically, some of the gold mines of the area are continuing to show operating profits. The immediate requirements in that vicinity total 134 underground workers.

Oil Wells—With development work progressing in the oil fields, Calgary has no applicants available to meet the fairly heavy demand for refinery and pipe line labourers. A new refinery and cleaning plant is to be built in the Turner Valley. This project will extend the need still further and it is expected that university and high school students may be directed to the work. In the Lethbridge district, too, new drilling is going forward, and there is a like scarcity of suitable workers to satisfy the increased demand.

Manufacturing—In common with the rest of the Dominion, the prairies underline the constantly augmenting labour demand of the manufacturing industries. War industries make prior claim on the region's resources, and Fort William tops the list with an approximate 1,200 workers needed for the aircraft factory. Of this number, about 800 must be skilled, and are not available locally. Hoped-for reinforcements from the local E.F.T.S., recently closed down, will not be forthcoming, as arrangements have been concluded for the transfer of most of the men to other schools. Fort William's shell plant, also, is urgent in the call for mechanics for rehabilitation work, and these are unobtainable in the vicinity.

The labour demand for Winnipeg industries still greatly exceeds the supply: sheet metal workers are particularly needed, and there is an acute shortage of skilled men and women in the garment factories. The aircraft plant alone has a total requirement of some 200 or 300 men; semi-skilled or unskilled workers are being taken on and women previously laid off are being rehired.

Little change is noted in the serious labour shortage in Edmonton packing plants, in spite of the transfer of a considerable number of labourers from British Columbia. In other centres the packing plants are continuingly short of the requisite heavy labour, but the situation on the whole is slowly improving, and the lack of husky labourers for the region's flour mills, foundries, etc., is more pronounced. In Port Albert two creosote

plants have large tie contracts with the railways and part-time workers have been directed to these companies to help fill their need of a large number of men capable of heavy manual labour. At Port Arthur the shipbuilding yards are calling for 76 skilled and semi-skilled tradesmen in all, and the pulp mills in the Lakehead city report 138 vacancies.

Construction—Activities in the prairie region are quite limited and for the time being private building projects are absorbing all available skilled tradesmen, as well as building labourers. There is, however, a serious manpower shortage developing in Port Arthur, as the area's extensive schedule of construction gets under way. On projects being undertaken in the district, a total of some 1,400 construction labourers will be required, and there is scant prospect of securing workers in such numbers.

Transportation—There is little likelihood of meeting the over-all demand of transportation throughout the prairie region, although the requirements of the running trades are less insistent for the time being. Casual work by local farmers is affording some relief to railway gangs. One of the greatest handicaps to be overcome is the lack of grain shovellers at the head of the Lakes, which has resulted in lake ships being held up unduly and a large number of box cars kept standing in the yards.

Pacific Region

Agriculture—The agricultural industry in British Columbia remains quiet, though there is an increase in the demands of dairy farmers, and for these vacancies no applicants are available. Farmers throughout the region, appreciative of the seriousness of the general labour shortage, are operating as well as possible with the help of their families, of women and high school students, who will also be needed later for the harvesting of the berry crops in such areas as Cranbrook and Kelowna.

In the Vernon area the apple crops are expected to be among the largest in the history of the Okanagan valley. Between June 5 and October 1 approximately 900 helpers will be required for orchard work, and an effort is being made to secure 300 Japanese girls and boys from Slocan City to assist in this labour. The fruit farmers are building accommodations for their assistants this year, and this should help to attract outsiders.

Logging—Every logging camp of the province is calling for more and more experienced and inexperienced bushmen—chokermen, boommen, loggers, riggers, fallers and buckers. With the exception of Nelson, all operations are working to capacity with the crews available, but there are no applicants for the many vacancies on file in local offices. Requirements have not altered substantially during the past month, but some of Cranbrook's operations have been temporarily curtailed by forest fires, and men taken from the camps for fire duty. At Chilliwack, one large company has suspended operations for the next few weeks, but the loggers laid off are being satisfactorily placed with other operators. Nelson, profiting by the release of men from the dam construction at Brilliant, is in better labour position than at any time during the past two years.

Sawmills—The sawmills of British Columbia are equally exigent in their call for labour—and equally hard to satisfy. In all parts of the province the demand is a heavy one, but New Westminster, as the largest milling centre, is most seriously handicapped, and production there has been greatly curtailed. Some women are being placed, but not enough to raise the total of workers to any appreciable extent.

Coal Mines—Orders for underground workers in the coal mines are very heavy, and few suitable applicants are to be found. While the shortage at the Crow's Nest Pass coal field near Fernie has been relieved somewhat by the transfer of miners from Princeton, experienced underground workers are still a vital necessity for haulage and general labour.

Withdrawal of machinery and the dismantling of the Princeton Tulameen mine has been completed. The Tulameen colliery, also in the Princeton area, has been closed down for a short time on account of a breakdown in compressor bearings, and the Granby has completed the electrification of the mine and henceforth will use its steam plant only as a standby. Citizens in the district are being urged to stock up with coal early, in order that local requirements may be met.

Base Metal Mines—The base metal mines are unanimous in their call for underground and heavy labourers, and the only relief in view will be afforded by the services of a few university students. The mine at Kimberley is fairly well supplied with surface men but still requires 200 underground workers, 100 experienced miners and 100 heavy labourers. The company is prepared to advance employees to higher jobs as they require experience, but the housing situation in the neighbourhood is an impediment to securing anyone from outside.

The "Twin J" mines at Duncan closed down during the month, releasing 72 men, who are relieving the acute need of local logging

camps and sawmills. The Wartime Metals Corporation's Kootenay-Florence project also closed on May 16, with 44 miners affected. The single men were allocated to other mines in the region and a number of the local married men are gradually being referred to the same operations. Women are being placed at the smelter at Trail as fast as they can be absorbed.

Manufacturing—The employment picture in the region's manufacturing industries remains practically static. Prince Rupert shipyards register a fair demand for steel workers and unskilled labourers. Shipbuilding demands in Vancouver are on the increase, and on the whole are being well met, but calls for helpers of all types are difficult to fill. In Victoria, also, the shipyards are placing more orders than for some time past, thus preventing lay-offs and even causing shortage of workers in the iron trades. The call for iron workers at the Victoria machine depot is also causing concern, and the services of students are only partially remedying the deficiency.

Aircraft needs remain fairly steady in Vancouver, and in Victoria they have eased somewhat. Foundry workers and women workers for the war plants are still in constant demand in Vancouver and other parts of the province, but very few are available. In New Westminster one aircraft plant is transferring about 100 skilled aircraft workers from a subsidiary plant at Moose Jaw.

Construction—From almost every employment office area comes a heavy demand for construction workers, especially finishing carpenters to meet the needs of the building boom which is extending to all parts of the province. Plasterers and electricians are also difficult to secure. Apart from such private construction, there is no great activity in larger projects. At Prince George all old National Defence contracts are completed and several new ones begun. Two survey parties are out locating the route for the highway from Prince George to Peace River, and when construction on the first portion commences shortly many labourers will be needed for the undertaking.

The completion of the dam at Brilliant has led to the release of approximately 400 men. The lay-off is being conducted by a representative of the Mobilization Survey in Vancouver, and the men referred to other industries throughout the region. A crew of some 250 are remaining at work for another two or three months.

Transportation—The pressing needs of the railways continue to be foremost in the transportation picture. Extra men for track maintenance are increasingly difficult to obtain, and the shortage in the Kamloops area is especially great. Bus drivers, heavy truck drivers and swampers are needed for Vancouver and Victoria, and there is an unceasing call for mechanics from all parts of the region.

Throughout the Dominion

Services—From coast to coast, the labour demands of the services continue unabated, and the likelihood of filling orders for domestic servants and staffs for restaurants, hotels, etc., is slight. The more pressing and most vital need of hospitals and sanitoria is being considered by National Selective Service, and an appeal has been issued for all graduate nurses and others with some institutional training to do their share in meeting a national emergency.

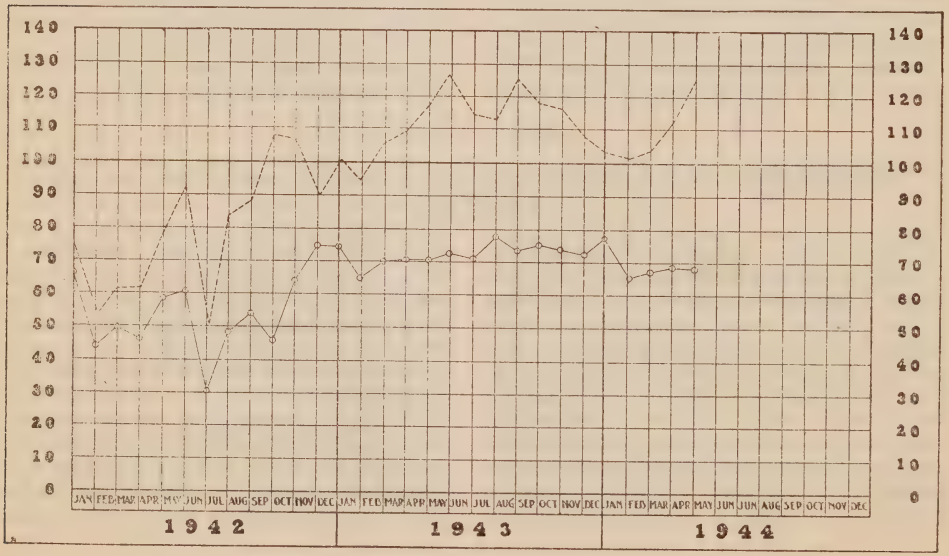
The close of the university year and the impending collegiate vacation should be of material assistance to industries which can utilize the services of students. Already hundreds of students have been added to the staffs of war plants or are working on the land, and as the summer advances Canadian youth will play an essential part in relieving manpower shortages throughout the country.

Applications for Employment; Vacancies and Placements; April, 1944

THE volume of business transacted by Employment and Selective Service Offices of the Unemployment Insurance Commission during the four-week period March 31 to April 27, as indicated by the average daily placements effected, showed a negligible increase when compared with the preceding four weeks and a slight decrease in comparison with the period April 2 to April 29, 1943. All industrial divisions, excepting forestry and logging, showed gains in the daily average of placements effected in comparison with the previous four weeks. When comparison is made with the four weeks ending April 29, last year, all industrial groups apart from forestry and logging, public utilities and agriculture showed losses, the decrease in manufacturing and construction being most pronounced.

The accompanying chart shows the trend of employment since January, 1942, as represented by the ratios of vacancies notified and placements effected for each 100 applications for work registered at Employment Offices

throughout Canada. It will be seen from the graph that the curve of vacancies in relation to applications followed a decidedly upward trend while that of placements took a downward course. The ratio of vacancies to each 100 applications was 125·4 during the four weeks ending April 27, in contrast with 111·8 during the previous four weeks and 116·5 during the four weeks April 2 to April 29, 1943. The ratio of placements to each 100 applications during the period under review was 68·9 compared with 69·3 during the preceding period ending March 30, and 70·1 during the four weeks ending April 29, last year.



The average number of vacancies reported daily by employers to Employment and Selective Service Offices throughout Canada during the period under review was 9,810 in comparison with 8,036 in the preceding four weeks and with 10,435 during the four weeks ending April 29, a year ago. The average number of applications for employment received daily during the four weeks March 31 to April 27, was 7,822 compared with 7,186 during the previous period and with 8,957 during the four-week period in April, 1943. The average number of placements made daily by the offices for the four weeks ending April 27, was 5,436, of which 5,275 were in regular employment and 161 in work of one week's duration or less, in comparison with a daily average of 4,980 during the previous four weeks. Placements during the four weeks April 2 to 29, 1943, averaged 6,277, consisting of 6,083 in regular employment and 194 in casual work.

During the period March 31 to April 27, 1944, the offices referred 174,829 persons to employment and effected a total of 125,026 placements. Of these, the placements in regular employment numbered 121,325, of which 81,034 were of males and 40,291 of females while placements in casual work totalled 3,701. The number of vacancies reported by employers was 151,262 for males and 74,362 for females, a total of 225,624, while applications for work numbered 179,911 of which 118,195 were from males and 61,716 from females. Reports for the four weeks ending March 30, 1944, showed 192,875 positions offered, 172,461 applications for employment and 119,518 placements effected, while in the four-week period April 2 to April 29, 1943, there were reported 240,025 vacancies, 206,022 applications and 144,373 placements in regular and casual employment. The following table gives the placements effected by the offices each year from January, 1934, to date:—

Year	Placements		
	Regular	Casual	Totals
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942	809,983	85,638	895,621
1943	1,890,408	53,618	1,944,026
1944 (17 weeks)	507,826	16,562	524,388

Nova Scotia and Prince Edward Island

Positions offered through Employment and Selective Service Offices in Nova Scotia and Prince Edward Island during the four weeks ending April 27, 1944, averaged 295 daily compared with 282 in the preceding period and 442 during the four weeks ending April 29, 1943. There was a daily average of 213 placements compared with 204 in the previous four weeks and 256 during April of last year. The reduction in placements from April, 1943, was greatest in construction, with a moderate loss shown in services. Of the changes in all other groups, gains in public utilities operation and manufacturing were the most important. Placements by industrial divisions numbered: manufacturing 2,000; services 1,032; trade 682; public utilities operation 673; construction 486 and mining 139. There were 3,563 men and 1,412 women placed in regular employment.

New Brunswick

There was a decrease in the average number of positions available daily at Employment Offices in New Brunswick during the period ending April 27, 1944, there being 209, compared with 229 in the previous four weeks and 283 during April of last year. Placements, likewise, showed declines under both comparisons, the daily average being 143 during the four weeks under review, as compared with 152 in the preceding period and 175 during the four weeks ending April 29, 1943. The decrease in placements from April last year was not large for the province as a whole under this comparison. The only changes of importance were declines in construction and manufacturing, and an increase in logging. Placements by industrial divisions included: manufacturing 1,133; services 762; trade 476; public utilities operation 381; logging 302 and construction 251. Placements in regular employment number 2,321 of men and 1,086 of women.

Quebec

Opportunities for employment at Employment Offices in the Province of Quebec during the four weeks ending April 27, showed an increase when compared with the period ending March 30, but a decrease in comparison with the four weeks ending April 29, 1943. The daily average being 2,761 during the period under review, 2,322 in the preceding four weeks and 2,929 during April of last year. The average number of placements effected daily was 1,401, in contrast with 1,487 in the previous period and 1,547 during April, 1943. All industrial divisions, with the exception of a substantial decrease in manufacturing and a fairly large loss in construction, recorded advances in placements when compared with April of last year. The most important increases were in logging and public utilities operation with improvement of more moderate proportions in agriculture, services and trade. Industries in which employment was found for more than 500 workers included: manufacturing 14,782; services 5,044; construction 3,348; logging 3,084; trade 2,889; public utilities operation 2,868; mining 667 and agriculture 542. Regular placements numbered 24,427 of men and 8,991 of women.

Ontario

Orders received at Employment Offices in Ontario during the period under review, called for an average of 3,919 workers daily compared with 3,366 in the preceding four weeks and 4,147 during April of last year. Placements showed a daily average of 2,117, in contrast with 1,912 in the previous period and 2,531 during the four weeks ending April 29, 1943. A substantial reduction in placements in manufacturing, augmented by a smaller decline in construction accounted for the loss from April last year under this comparison. In addition, however, services and trade reported moderate declines, while a fairly large gain was registered in public utilities operation. The changes in all other groups were small. Industrial divisions in which the majority of placements were effected were: manufacturing 22,305; services 9,675; public utilities operation 6,620; trade 5,714; construction 2,615 and logging 1,570. There were 31,347 men and 18,376 women placed in regular employment.

Manitoba

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Manitoba during the four weeks ending April 27, was 431, as compared with 397 during the period ending March 30, and 531 in the four weeks ending April 29, last year. There was a daily average of 263 placements compared with 255 in the preceding four weeks and 414 during April, 1943. All industrial groups, except agriculture, fishing and hunting, recorded declines in placements from April of last year. The largest reductions being in manufacturing and construction, while smaller losses occurred in services, trade, public utilities operation and logging. Placements by industrial groups included: manufacturing 1,977; services 1,970; trade 1,134; public utilities operation 594, construction 294 and agriculture 161. Placements in regular

employment number 3,110 of men and 2,293 of women.

Saskatchewan

Employment opportunities, as indicated by orders received at Offices in Saskatchewan during the period ending April 27, showed a daily average of 289, compared with 197 in the previous four weeks and 315 during April of last year. The average number of placements recorded daily was 161 during the four weeks under review, in comparison with 127 in the preceding period and 196 during the four weeks ending April 29, 1943. With the exception of a moderate increase in manufacturing and a minor gain in public utilities operation, all industrial groups show declines. The greatest decreases were reported in services, trade and construction. Placements by industrial divisions numbered: services 1,242; manufacturing 789; trade 762; public utilities operation 495; agriculture 311 and construction 182. Regular placements numbered 2,193 of men and 1,339 of women.

Alberta

Orders listed at Employment Offices in Alberta during the period under review, called for a daily average of 498 workers compared with 408 in the preceding four weeks and 528 during the period ending April 29, 1943. Placements showed a daily average of 290, in comparison with 242 in the previous period and 358 during April of last year. When comparing placements by industrial groups with April of last year, none of the changes was large. Moderate declines in agriculture, public utilities operation, services, trade and an increase in manufacturing were the most important. Placements by industries included: services 2,002; manufacturing 1,361; trade 1,144; construction 958; public utilities operation 740 and agriculture 335. There were 4,057 men and 2,457 women placed in regular employment.

British Columbia

During the four weeks ending April 27, 1944, the daily average of positions offered through Employment Offices in British Columbia was 999, compared with 836 in the previous period and 1,262 during the four weeks ending April 29, 1943. The average number of placements registered daily was 622 during the period under review, in contrast with 600 in the preceding four weeks and 801 during April of last year. Placements in manufacturing were considerably less numerous than during April last year, while a fairly large decline was registered in construction. Logging was the only group in which a gain was recorded. Industrial divisions in which most of the placements were effected included: manufacturing 4,215; services 3,268; logging 2,007; trade 1,796; construction 1,614 and public utilities operation 1,382. During the period under review, placements in regular employment numbered 10,016 of men and 4,337 of women.

Booklet on Canada's Rehabilitation Program

A BOOKLET recently prepared to inform members of the armed forces and Canadians generally of steps taken for civilian rehabilitation of those in uniform is entitled *Back to Civil Life*.

In a foreword, the Honourable Ian A. Mackenzie, Minister of Pensions and National Health, explains that

> Canada has been making plans for the civil re-establishment of its service personnel since a few months after the outbreak of the war. Many of the steps which have been taken are in full operation. Hundreds have received financial assistance, other hundreds have been given training. Those discharged, up until the present time, have given us a testing basis and results of this testing have been encouraging.
>
> Canada's rehabilitation belief is that the answer to civil re-establishment is a job, and the answer to a job is fitness and training for that job. Our ambition is that these men and women who have taken up arms in defence of their country and their ideals of freedom shall not be penalized for the time they have spent in the services and our desire is that they shall be fitted in every way possible to take their place in Canada's civil and economic life. We believe this ambition and this desire can be achieved. Results up until the present indicate this belief is well founded.

The booklet outlines in non-technical language the various provisions for the benefit of ex-service personnel, including the right of reinstatement in former employment, allowances under the Post Discharge Re-establishment Order, opportunities for vocational training and university education, treatment facilities, pensions, and benefits under the Veterans' Land Act.

Labour Law

Labour Legislation in British Columbia and Alberta in 1944

British Columbia

THE British Columbia Legislature, in session from February 1 to March 15, 1944, passed laws to make the Wartime Labour Relations Regulations of the Dominion (P.C. 1003) applicable to industries in which employer-employee relations are within the jurisdiction of the Province, to control further the employment of children, to enable the Provincial Government to make agreements with the Dominion to carry out the Vocational Training Co-ordination Act, and to extend to certain seamen who have served in a war zone all rights enjoyed by members of the armed forces. Acts dealing with minimum wages and old age pensions were amended.

Wartime Labour Relations Regulations

The Wartime Labour Relations Regulations Act, which was proclaimed in force on April 18 and is to remain in force until its termination is proclaimed, provides that the Wartime Labour Relations Regulations of the Dominion (P.C. 1003, Feb. 17, 1944), which are set forth in the Schedule to the Act, shall apply to employer-employee relations which are ordinarily within the jurisdiction of the Province and to organizations of such employers and employees. The Act enables the British Columbia Government through the provincial Minister of Labour, to make an agreement with the Dominion Minister of Labour to provide for the administration within the Province of the Dominion Wartime Labour Relations Regulations or any part of them. The agreement may provide the manner in which the Dominion Minister may exercise the powers conferred on him in appointing or constituting administrative officers or agencies in the Province and in delegating to them such of his own powers under the Dominion Regulations as he considers necessary. The agreement may also provide for the transfer to the Provincial Government, or some person specified by it, of all or any part of the jurisdiction conferred on the Dominion Wartime Labour Relations Board by the Dominion Regulations and for the procedure whereby an appeal may be had to the Dominion Board from a decision of the provincial authority. Provision for reimbursing the Province for expenses incurred under the Act may also be included in the agreement. If no agreement is made, Dominion authorities may administer the Dominion Regulations with respect to industries within provincial jurisdiction.

Any changes in Dominion Regulations may be given effect to, for the purposes of the British Columbia Act, by regulations made by the Lieutenant-Governor in Council.

While this Act is in force, the Industrial Conciliation and Arbitration Act is to be suspended except as to matters covered by that Act but not covered by the Dominion Regulations and except as to matters pending under that Act.

Employment of Children

The Control of Employment of Children Act forbids employment of a child under 15 in any industry, trade or business covered by the Act unless written permission has been obtained from the Minister, setting forth the number of hours per day and the conditions of employment. The Act applies to the employments set out in a schedule, namely, manufacturing, shipbuilding, electrical industries, logging, construction, catering (i.e., all operations connected with the serving of meals or refreshments), places of public amusement, and such shops or stands for the sale of fresh fruit, vegetables, soft drinks, cut flowers, and dairy products as are exempt from the provisions of the Weekly Half-holiday Act. The Lieutenant-Governor in Council may, by regulation, add industries to the Schedule or remove them from it and may declare the Act applicable only to certain parts of the Province or to a part of any industry, trade, business or undertaking set out in the schedule.

The Minister may require the employer to keep the employment permit posted in a conspicuous place in his establishment as long as the child referred to remains in his employment. A fine not exceeding $50 may be imposed for failure to post the permit when

required. A similar penalty may be imposed for employing a child without a permit or under conditions other than those specified in the permit, and on the parents or guardian of a child for permitting employment in contravention of the Act. No prosecution may be instituted without leave of the Minister. In any prosecution proof of the age of the child is on the defendant.

Where an employer obtains a permit under the Factories Act to employ a child he is not required to obtain one under this Act with respect to the same child.

Wages

Identical amendments in the Male and Female Minimum Wage Acts, effective June 1, 1944, require employers to furnish on every pay-day a written wage statement to each employee, showing his earnings for the pay-period, any bonus or living allowance, and the amount and purpose of each deduction. The Minister may, by written notice to the employer, require that the statement also show overtime earnings.

Any person authorized to inspect payrolls and records of an employer may also examine the form of wage statement used and any statement of wages furnished to any employee. If the Minister is not satisfied that a wage statement meets the requirements, he may direct the employer to change it.

Where an employer has furnished the required statement and in consecutive pay-periods after the period to which the statement applies there has been no change in wages, bonus, living allowance or deductions, the single statement is to suffice until such a change occurs.

These provisions apply to every employer and employee in every industry, business, trade or occupation to which the Acts apply, whether or not a Minimum Wage Order applies.

A private member's Bill to bring farm labourers, fruit pickers and domestic servants under the Female Minimum Wage Act failed to pass.

An amendment was made in the Attachment of Debts Act, which defines the powers of a judge or a district registrar with regard to the attachment of debts and provides that no debt due or accruing due to a mechanic, workman, labourer, servant, clerk or employee in respect of his wages or salary shall be liable to seizure or attachment unless such debt exceeds $60 and then only to the extent of the excess, except where the debt is wages for less than a month when a proportionate amount is unseizable. The amendment defines "debt or moneys accruing due" and similar expressions to include wages or salary which would in the ordinary course of employment become due or payable within four days after the day on which an affidavit in support of a garnishing order has been sworn. A new subsection then provides that a person shall be deemed to be indebted or liable for wages or salary if such wages or salary is a debt or money accruing due, but that no garnishee is to be liable to pay under an order attaching debts any money that, but for this subsection, he would not be liable to pay. Other amendments are merely consequential.

Vocational Education

The Vocational Training Co-ordination Enabling Act authorizes the Government of the Province to enter into an agreement with the Dominion Minister of Labour for any of the purposes mentioned in the Vocational Training Co-ordination Act, 1942, of the Dominion (L.G., 1942, p. 921). The Dominion Act authorizes the Dominion Minister to provide training to fit persons for employment contributing to the prosecution of the war or to the conservation or development of the natural resources of Canada and to fit for employment former members of the Canadian Forces, former members of any other of His Majesty's Forces who at the time of enlistment were domiciled in Canada, persons approved for training by the Minister of Pensions and National Health and persons whom the Unemployment Insurance Commission has directed to attend a course of training. The Dominion Act also enables the Minister, with the approval of the Governor in Council, to give financial assistance to the Provinces for vocational training undertaken in the Province for the above purposes and assistance up to 50 per cent of the cost of continuation of projects carried on under the Dominion Youth Training Act, 1939, the development by the Province of any scheme recommended by the Advisory Council set up under that Act to provide training for apprentices and supervisors in any industry, and the development after the war of vocational training on the secondary school level.

Seamen

The War Mariners' Benefits Act defines a "mariner" as a person who has served in deep-sea waters in a war zone during the present war in any ship whose port of registry was, during such service, in a port of the British Commonwealth and who during his period of service was domiciled in British Columbia.

Every mariner is to enjoy any benefit, right, privilege or exemption conferred by any statute of the Province on members of the Allied Forces. Where, in such statute, any time is to be computed with reference to the date of discharge of a member of the Allied Forces, the reference is to be deemed to be to the date of the termination of the war.

Pensions and Superannuation

The Old Age Pension Agreement Ratification Act ratifies an agreement between the Dominion Government and the Government of British Columbia under the Dominion Order in Council (P.C. 6367, August 10, 1943) providing for a special war supplement not exceeding $5 per month to old age and blind pensioners. The supplement is payable by the Dominion and the Province on the same basis as the pensions, 75 per cent and 25 per cent, respectively.

Amendments in the Municipal Superannuation Act are retrospective to April 1, 1939, when the principal Act came into effect. Any person who has been employed by the same employer for a period of twelve months becomes a permanent employee for purposes of the Act. The Commissioner of Municipal Superannuation may reinstate, as an employee under the Act, any person who has been previously employed for twenty years or more by an employer under the Act and who has been re-employed by the same employer but who at the time of re-employment is over the age of entry prescribed by the Act but below the maximum retiring age.

Miscellaneous

The National Physical Fitness Act authorizes the Government of the Province to make agreements with the Dominion under the National Physical Fitness Act, 1943.

Amendments in the Credit Unions Act enable any ten or more credit unions to form a central credit union which is to be incorporated like other credit unions. Its rules are to conform as nearly as possible to those prescribed by the Act but may be varied as approved by the Inspector. A central credit union may make loans to members of any amount without security other than the covenant or obligation of the borrower, and may, without the approval of the Inspector, make loans to a member credit union. A member of a credit union who holds fewer than five shares and has not in any fiscal year subscribed and paid in full for at least one other share may be required by the directors to do so, on penalty of cancellation of his membership. Where a share is forfeited for default in payment or because the moneys paid on it have been applied to a debt due by the holder to the credit union, any amount paid on the share is also forfeited. Notice of the suspension or removal of suspension of a credit union is now to be given in the manner required by the Inspector instead of being published for four weeks in the *Gazette* by the Registrar, as formerly required. The Trust Companies Act is not to apply to a credit union.

Bills not Passed

Two Bills which failed to pass would have amended the Female Minimum Wage Act and the Industrial Conciliation and Arbitration Act. The former was noted above under "Wages". The latter would have added to the definition of "collective bargaining" the words "culminating in the signing of an agreement", and would have defined a "member of a trade union" as a person who has been duly admitted to membership and who is in good standing according to the constitution and by-laws of the union.

Resolutions

On March 8 the Legislature adopted Resolutions urging the rescinding of the Dominion Wartime Wages Control Order (P.C. 9384), opposing the establishment of any more company unions in the Province, and requesting that a petition be sent to the Dominion Government asking an amendment to the Old Age Pension Act to provide for a maximum pension of $365 a year, maximum income of $500 a year and a lowering of the pensionable age to 65 for men and 60 for women. Resolutions adopted on March 10 approved the calling of a Dominion-Provincial Conference to discuss post-war matters, and requested that the House urge upon the Dominion Government the need of a Dominion-wide housing program, including housing and improvement loans applicable to urban and rural municipalities, low rental housing for low-income groups, and rural and farm housing. A Resolution adopted on March 15 requested that the Minister of Labour be asked to institute an inquiry into the conditions of employment in domestic service, taking into consideration living conditions, hours of work, wages, training, and part-time and daily employment, in order to establish standards for this occupation.

Alberta

The Alberta Legislature which opened on February 10 and was prorogued on March 24, enacted laws governing apprenticeship and providing for a Department of Public Welfare, revised the Child Welfare Act and amended the Industrial Conciliation and Arbitration Act to enable the Dominion Wartime Labour Relations Regulatons to be applied to employments within the jurisdiction of the Province. Statutes dealing with regulation of steam boilers, hours of labour in fire departments and security for wages in mining and certain other industries were amended.

Collective Bargaining

An amendment in the Industrial Conciliation and Arbitration Act of 1941 authorizes the Lieutenant-Governor in Council to make an Order bringing the Dominion Wartime Labour Relations Regulations (P.C. 1003) into effect in the Province, with respeect to employer-employee relations which are under provincial control and suspending the operation of the principal Act with respect to such employers and employees during the time the Order is in force. The Minister of Trade and Industry is given power to make an agreement with the Dominion for the administration of the Regulations in the Province.

A number of other amendments were made in the Act. "Collective bargaining" and "bargain collectively" are defined to mean "to negotiate in good faith with a view to the conclusion of a collective labour agreement or an amendment or amendments to an existing agreement." "Collective bargaining agency" and "bargaining agent" are defined as any trade union or any organization or association of employees which has bargaining collectively among its objects, including representatives elected for the purpose of collective bargaining, but not including any trade union, organization, or association of which the formation, administration, management or policy has been assisted or influenced, directly or indirectly, by the employer or by the employer's agent. The definition of "dispute" as "any dispute or difference between an employer and a majority of his employees or a majority of any class or category of his employees" was amended by replacing the last seven words by the words "a unit or classification of his employees". "Employee" was limited to those employed otherwise than temporarily. "Trade union" is defined as a national or international employees' organization or a local branch chartered by, and in good standing with such an organization. In the definition of "organization" the reference to a trade union was struck out

The section which recognized the right of employers and employees to organize for any lawful purpose was repealed and a section enacted declaring a collective bargaining agency and its acts not to be unlawful by reason only that one or more of its objects are in restraint of trade.

The revised sections dealing with collective bargaining now provide that the employees of an employer or any specified unit or classification of employees who claim to be appropriate for collective bargaining may appoint a bargaining agent at a meeting held after notice of the time, place and purpose of the meeting has been given. If more than one bargaining agent is nominated the vote must be by secret ballot. As formerly, the chairman of the meeting must send immediately to the Minister a statutory declaration giving the name of the employer, place of employment, total number of employees or the number in the unit or classification of employees, number attending the meeting, names and addresses of the members of the negotiating committee or of the officers of the trade union or organization, and the number of votes cast in favour of the committee, trade union or organization appointed as bargaining agent, whether a ballot is required or not. No appointment is effective until these requirements have been complied with.

Under new provisions this information is to be referred to the Board of Industrial Relations, which is to inquire and report as to whether the trade union, association, organization or elected representatives claiming to be the bargaining agent is a proper bargaining agent and has received a majority vote; whether, in the case of a unit or classification of employees, such unit or classification is appropriate for collective bargaining; whether the bargaining agent has been appointed in accordance with the Act and, in particular, whether the vote has been properly taken and as to the number of employees attending the meeting and the result of the vote; and any other questions of fact which are material. In this inquiry the Board may receive written or oral representations from the bargaining agent claiming to have been appointed, from any other bargaining agent and from the employer or employees. Any interested party may appear by counsel or agent.

The Board must report to the Minister within fourteen days after the matter has been referred to it. On receipt of the report the Minister must notify the interested parties, any of whom may appeal to the Minister from the Board's decision within ten days. If no appeal is taken, the Board's findings

are binding on all parties. If, however, the Minister receives notice of appeal he must refer the matter to a tripartite board of arbitration similar to that provided for other disputes and must notify the parties that he has so referred it. The employees' representative on this Board is to be a representative of the bargaining agent claiming to have been appointed. The Board is to report within seven days and its findings are binding. The Board of Industrial Relations or the board of arbitration, if not satisfied that the bargaining agent has been properly appointed, may order the taking of another vote under its supervision.

The Board of Industrial Relations, at the employer's request, or on petition of at least 50 per cent of the employees affected, or on the Minister's direction, may order a vote under its supervision on any question which involves labour relations or as to which it is desirable to have an expression of opinion by the employees. The vote is to be secret and the Board may lay down the procedure, When a bargaining agent is appointed under these provisions, it is to continue as such for not less than one year unless changed by agreement between employer and employees.

As previously, the bargaining agent may give the employer notice of a meeting for the purpose of bargaining. Under new provisions, if negotiations have continued for thirty days and either party believes that agreement will not be reached in a reasonable time, it may ask the Minister to intervene. If the Minister considers it proper, he may request the Board of Industrial Relations to inquire and report to him within fourteen days. If the Board fails to effect an agreement, the Minister must refer the matter to a tripartite board appointed in accordance with the Act.

Only employees directly affected by the recommendations of any board of arbitration may vote on the question of their acceptance or rejection.

A section added to the Act provides for deduction of union dues from an employee's wages on written order from the employee.

Apprenticeship

The Apprenticeship Act, which will come into force on Proclamation, enables the Minister of Trade and Industry, with the approval of the Lieutenant-Governor in Council, to enter into an agreement relating to apprenticeship with the Dominion Minister of Labour under the Vocational Training Co-ordination Act, 1942, and Orders in Council made under it. Such an Order in Council (P.C. 8993) was passed on January 21, 1944, and provides for a Dominion-Provincial program of apprentice training, the expense to be borne wholly by the Dominion in the case of ex-service men and on a fifty-fifty basis in other cases.

The Alberta Apprenticeship Act is generally similar to statutes passed in Ontario in 1928, in British Columbia in 1935, and in Nova Scotia in 1937. Legislation along similar lines has been passed during the present year in New Brunswick, Saskatchewan, Manitoba and Prince Edward Island. The Alberta Act provides for the appointment of a Director of Apprenticeship whose duty it is to promote interest in apprenticeship and to assist in establishing a permanent system of apprentice training and supervise it. Provision is also made for a Provincial Apprenticeship Board of not more than five persons, including one representative each of industry and organized labour, to advise the Minister of Labour. The Board may, on recommendation of a representative number in any trade which is designated as a trade to which the Act applies, appoint a Provincial Advisory Committee for the trade or group of trades. The Committee is to consist of not less than five members representing equally employers and employees and an official of the Department of Trade and Industry. The Board may also appoint a local Advisory Committee of not more than five members for any trade in any area of the Province, to hear complaints and make recommendations to the Board.

Any trade or branch of a trade may be designated by the Lieutenant-Governor in Council, on recommendation of the Minister, as a trade to which the Act applies, but there is no schedule of designated trades appended to the Act itself as in Ontario and British Columbia. The Minister may also recommend the designation of a trade on petition of a representative number of employers or employees in the trade or on receipt of a written agreement between a representative group of employers and a representative group or union of employees. The Minister may refer such a petition or agreement to the Director for inquiry and may also, of his own motion, order investigation by the Director as to the desirability of bringing any trade within the Act. He may, also with the approval of the Lieutenant-Governor in Council, designate any trade as one to which the Act applies or declare any designated trade to be no longer under the Act.

On recommendation of the Minister and with the approval of the Lieutenant-Governor in Council, the Board may make regulations dealing with qualifications and training of apprentices, and, subject to the Hours of Work Act and the Male and Female Minimum Wage

Acts, with their hours of labour and wages. Such regulations may also deal with certificates, fees, form and registration of contracts, procedure for cancellation of contracts and transfer of apprentices, registration of employers engaged in a designated trade, powers of Provincial Advisory Committees, and generally carrying out the provisions of the Act. The Board may hold conferences and make inquiries to determine the wishes of employers and employees in the designated trades with regard to suggested changes in the Act and regulations. A Provincial Advisory Committee, on recommendation of the Minister and with the approval of the Lieutenant-Governor in Council, may make regulations in respect to the particular trade, relating to all matters on which the Board may make regulations, provided they are not inconsistent with the regulations of the Board. In particular, the Committee's regulations may deal with the age of apprentices, the apprenticeship period and the number of apprentices who may be apprenticed to each employer. No amendment may be made in any regulations of the Board or of a Provincial Advisory Committee unless written notice has been given to representative organizations of employers and of employees in the trade affected or, where no such organization exists, to at least five representative employers or employees, as the case may be, engaged in the trade in various parts of the Province.

No person may enter into a contract of apprenticeship in a designated trade except in accordance with the Act and no person who is eligible to be an apprentice in a designated trade and has not completed the prescribed period of apprenticeship may be employed in such trade for more than three months unless he is authorized by the Board to do so or unless he enters into a contract of apprenticeship under the Act. The minimum age for entry into apprenticeship is 16 years.

Unless the regulations make a contrary provision, no contract of apprenticeship may be for less than twelve months of 2,000 hours' training in the trade, exclusive of holidays, supplemented by at least 144 hours of related technical classroom instruction. Every contract must be approved by the Board and must be registered by the employer with the Director. Contracts of apprenticeship in a designated trade existing prior to the passing of the Act must be registered by the employer within three months. Where there is no formal contract, the Act is to apply after three months from the date of designation of the trade. Every contract must be signed by the employer and the person to be apprenticed and, if the latter is a minor, by his parents or guardian or, failing such, by the district court judge of the district in which the employer carries on business. Provision is made for cancellation of a contract with the approval of the Board, or by the Board for cause, and for the transfer of an apprentice from one employer to another in certain cases.

Wages

The Industrial Wages Security Act was amended to require any person engaged in an industry to which the Act applies to lodge security for the wages of employees of contractors. Work done on mining land preparatory to the getting of coal now ranks as mining for purposes of the Act.

Hours of Work in Fire Departments

The section of the Fire Departments Platoon Act, which enables the council of a city or town with a population of 8,000 or more to provide by by-law for the three-platoon system in its fire department but requires the by-law to be submitted to the electors at the annual election, was amended to stipulate that if there is no polling for councillors, the council is to submit a by-law at as early a date as possible after the usual time for the election.

Employment of Children and Young Persons

The Child Welfare Act was amended and consolidated with a number of other statutes touching the welfare of children. The Act is to be administered by a Child Welfare Commission of not less than three nor more than five members with all the powers formerly possessed by the Superintendent of Child Welfare, who is to be ex officio Chairman of the Commission.

The power given to municipal councils of cities, towns and villages to license and control children employed in street trades was extended to councils of municipal districts. No licence may be granted to a child under 12, nor to a child over 12 but under 15 without the written authority of his parent or guardian. Formerly, no licence could be granted to a female child ("child" being defined as a person actually or apparently under 18) or to a male child under 12, or to a male child between 12 and 14 except with the written authority of parent or guardian.

No person may employ a child under 16 between 9 p.m. and 8 a.m., under penalty of a fine of not more than $100 and costs and in default of payment to imprisonment for not more than three months. Previously the

habitual employment of a child under 16 between 9 p.m. and 6 a.m. was forbidden, under penalty of a fine of $50 and costs or imprisonment with hard labour for not more than one month.

The parent or guardian is now included among the persons liable to penalty for causing a child under 16 to be in a public place for the purpose of singing, performing for profit, or offering anything for sale or to be employed between 9 p.m. and 8 a.m. or to perform in any circus or place of amusement, or contributing in any way to neglect of a child.

A new section provides that any person who employs a girl under 18 in a restaurant or hotel without the written consent of her parent or guardian is guilty of an offence and liable to a fine not exceeding $200 and costs or to imprisonment for not more than six months, or to both fine and imprisonment.

Steam Boilers

Amendments in the Boilers Act add a number of definitions, provide for appointment of inspectors of unfired pressure vessels and machinery, and set out the qualifications required of such inspectors.

Schools

The Operation of Schools (War) Act was amended to change the date of the school holiday from the period from August 1 to the second Monday in October to the period from July 16 to September 30 inclusive.

An amendment in the School Attendance Act requires a pupil reaching the school-leaving age of 15 during the June term to continue attending school to the end of the term.

Old Age Pension

The Old Age Pension Act, Alberta, was amended to validate an agreement with the Dominion Government providing for an increase of $5 per month in old age and blind persons' pensions.

Department of Public Welfare

The Department of Public Welfare Act creates a new Department to inquire into and report to the Lieutenant-Governor in Council upon all matters connected with the welfare of the people of the Province which are not under the control of any other Department.

Post-war Reconstruction

An amendment in the Calgary Charter enables the City Council, during the war and for one year thereafter, to accumulate a fund to cover the cost of delayed public improvements, including new housing, to be undertaken before or after the end of the war, as the Council may decide.

Co-operative and Building Associations

Changes in the Co-operative Association Act abolish the fee of twenty-five cents for filing any document and reduce the fee for filing amended by-laws and rules from $2.50 to $1.

An amendment in the Building Association Act enables the Building Associations Advisory Board to delegate to the Supervisor of Co-operative Activities its duties in examining applications for incorporation under the Act and in holding inquiries and reporting to the Minister of Trade and Industry regarding the affairs of any building association.

Resolution

A Resolution agreed to on March 23 urged the Dominion Government to lower the age-limit for old age pensions to 60 years, raise the pension to $50 a month, provide hospital, medical and dental care to pensioners with suitable housing and compassionate pensions where unusual conditions exist, modify property and income qualifications, and simplify the method of payment to reduce administration costs. It was further requested that the above recommendations should apply to blind persons over 21 years of age and that the degree of blindness necessary to qualify for a pension be reduced.

Recent Regulations under Dominion and Provincial Legislation

MERCHANT seamen who join a manning pool are given reduced railway rates to their homes once a year. The guaranteed weekly wage for longshoremen at Halifax is now $30.40. A National Joint Council of the Public Service of Canada has been established with a tentative constitution. Certain cases are specified in which employers need not make income tax deductions from the wages of their employees. Broadly speaking, these relate to persons receiving less than a taxable income.

In Alberta, workplaces where oil is stored, produced, or processed, are now factories under the Factories Act, rules have been made regarding the installation of auxiliary fans in mines, and the regulations governing motion-picture projectionists have been amended.

New regulations regarding the welding of steam-boilers and pressure vessels have been issued in British Columbia, and provision made under the new British Columbia Wartime Labour Relations Act to apply that Act to the bargaining representatives and applications for certification made under the Industrial Conciliation and Arbitration Act. Rules of practice of the Ontario Labour Relations Board have been laid down, and certain Dominion Orders in Council concerned with labour relations made applicable to workmen in Ontario. Certain small workplaces have been brought under the Ontario Workmen's Compensation Act and also hotels and hospitals. In Quebec, new public health regulations including regulations for dangerous trades, and new regulations applying to pressure vessels have been gazetted. Mother's allowance payments have been increased in Saskatchewan.

Dominion

Seamen

Round-trip railway transportation at the price of one-third of the single fare is to be provided annually from a manning pool to the permanent residence of all seamen who have signed an agreement to join a manning pool and to serve at sea on foreign-going ships of Canadian registry for the duration of the war or two years, whichever is the shorter. According to the Order, which was gazetted May 8, six months' service must be completed before this transportation is furnished.

Longshoremen

An amendment gazetted May 15 to the Stabilization of Longshore Labour (Halifax) Order of June 25, 1943 (L.G., 1943, p. 901) changes the definition of a guaranteed weekly wage to $30.40 instead of being merely equivalent to the basic rate of pay plus war bonus and cost-of-living bonus. Originally to come into effect on May 16, this order has been amended to become effective June 17.

Civil Service

The establishment of an employer-employee council with respect to the Public Service of Canada was authorized by an Order in Council of May 16. The Order contains a draft of the tentative constitution of the National Joint Council which outlines the membership, purpose and duties of the Council. This preliminary constitution is to have effect until a permanent one has been approved by the Treasury Board after report by the Council. Eight members representing the Government side are named and eight civil servants' organizations each of which is to appoint one representative to the Council. The duties of the Council will include recommending to the Treasury Board or the Civil Service Commission, as the case may be, the best methods of securing for the staff greater responsibility for determining and observing their conditions of work; the general principles which should govern these employment conditions; methods of utilizing the ideas and experience of the public servants and of training them in higher administration and organization; and advising on proposed legislation affecting the employment of civil servants. Decisions of the Council are to be arrived at by agreement of the two sides.

Income Tax

Regulations governing income tax deductions at the source were established by an Order in Council of March 28, gazetted May 29. Employers are not required to make deductions from the wages of an employee who sets forth on a prescribed form that he is a person who, if fully employed for the balance of the calendar year at his present rate of pay, would not receive sufficient income to render him liable to income tax; or a student employed on seasonal, temporary or part-time work who will not receive more than $660 for the year; or a housewife employed for a temporary period not exceeding six months in the year whose total income will not be in excess of $660; or a male member of the Armed Forces on active service in Canada receiving less than $1,600 per year in service pay and allowances, and employed on civilian work during spare time or during a leave not exceeding four months from which the income, exclusive of service pay, would not be sufficient to render him liable to income tax; or a United States resident employed in Canada for a period not exceeding 90 days and whose earnings from Canadian employment are not more than $1,500 during the calendar year. In addition, employers need not make deductions from any employees who satisfy the Minister that they will not receive sufficient income to render them liable to income tax, even if the remuneration they receive for a portion of the year is at a rate which would otherwise be subject to tax deductions at the source.

Other Orders

The following Orders in Council are summarized elsewhere in the LABOUR GAZETTE: P.C. 3438 of May 8 amending the National

Selective Service Civilian Regulations regarding the termination of employment in "designated establishments"; P.C. 2675 of April 13, and P.C. 2454 of May 26 making other amendments in those Regulations; P.C. 3492 of May 12 authorizing agreements with the provinces dealing with farm labour; P.C. 4/3655 of May 15 amending the Post-Discharge Re-establishment Order; P.C. 4176 of May 30 authorizing the employment of women at Millwood Fluorspar Mines Ltd. under conditions laid down after consultation with the Ontario Minister of Mines; P.C. 3874 of May 23 establishing a Civil Service Mobilization Committee; P.C. 3733 of May 18 providing greater latitude for the admission of children of mothers working in other than war industry into Quebec day nurseries.

Provincial

Alberta Factories Act

All Production Tank Farms engaged in the production, processing and storing of oil products are declared to be factories within the meaning of the Act by a proclamation gazetted May 15.

Alberta Mines Act

An order gazetted May 15, adding a new section to the regulations under this Act, requires that auxiliary fans underground shall be installed in such a position that there will be no re-circulation of return air within the fan.

Alberta Theatres Act

The regulations governing motion-picture projectionists (L.G., 1944, p. 527) have been amended by an order gazetted May 15. In theatres where there is more than one machine used in the cities of Edmonton, Calgary, Medicine Hat and Lethbridge, two licensed projectionists must be on duty, both of whom must hold first-class licences when the seating capacity exceeds 500, but when it does not, the assistant may hold a third-class licence. Formerly, places of more than 3,000 inhabitants needed only one projectionist with a second-class licence when the seating capacity was under 500, and two projectionists, only one of whom needed a first-class licence when over 500 could be seated. For all other parts of the province, one licensed projectionist who is the holder of at least a third-class licence must be employed, but the Chief Inspector of Theatres may prohibit operation of the theatre unless there are two projectionists, if he thinks that the safety of the public is endangered. An appeal may be had to the Lieutenant-Governor in Council from the Inspector's decision. Previously theatres in places of less than 3,000 population required one projectionist, holding a third-class licence when the seating capacity was under 500, and a second-class licence when it was over 500.

British Columbia Boiler Inspection Act

New regulations respecting the welding of steam-boilers and pressure vessels have been issued, gazetted May 11, repealing all former regulations relating to welding.

No person is permitted to do any welding governed by these regulations unless he is a qualified welder. That is, he must have had at least two years' experience, and have passed tests consisting of various types of welds. Only those who expect to do work which comes under the Boiler Inspection Department are to be given the test, and it must be repeated every 12 months.

The method of calculating the maximum working pressure of welded vessels is outlined, tests are prescribed, requirements are laid down as to the methods of welding and the workmanship, and vessels are classified into three types. The approval of the Department must be obtained before welding repairs are made to steam-boilers and pressure vessels.

British Columbia Wartime Labour Relations Act

Regulations one and two under this Act gazetted May 4 provide that applications for the certification of bargaining representatives under the Industrial Conciliation and Arbitration Act, which has been superseded by the Wartime Labour Relations Act, are to be continued as applications under the Wartime Labour Relations Regulations, and that persons elected or appointed as bargaining representatives under the earlier Act are to continue to act in that capacity under the new Regulations.

Ontario Labour Relations Board Act

An Order in Council of May 27 provides for the application of a number of Dominion Orders in Council to all employees whose relations with their employers are ordinarily within the exclusive legislative jurisdiction of the Province of Ontario. The Orders concerned are the Wartime Labour Relations Regulations (P.C. 1003) of February 17, an Order (P.C. 2301) of March 30, authorizing the Ontario Labour Court to dispose of proceedings pending in it on March 20, an Order (P.C. 2911) of April 27, regarding the administration of the Regulations in Ontario, and

one (P.C. 4020) of June 6, 1941, as amended, dealing with Industrial Disputes Inquiry Commissions, which is to be applied in so far as it is not inconsistent with the Wartime Labour Relations Regulations.

Rules of practice and procedure of the Ontario Labour Relations Board were gazetted on May 27. The rules specify the information which must be contained in four different forms of petition: (1) a petition for the certification of bargaining representatives; (2) a petition requesting the establishment of an appropriate procedure for consideration and settlement of disputes concerning the interpretation or violation of a collective agreement; (3) a petition for leave to institute prosecution for failure by any person to do the things required of him according to procedure established by the collective agreement for dealing with disputes; and (4) a petition for leave to institute proceedings for violation of any other provision of the Wartime Labour Relations Regulations.

Provision is made for the filing of replies within seven days after the serving of a petition, and for notices of intervention within seven days after notice of the petition has been posted. The Chief Executive Officer of the Board may extend any of the periods specified. The regulations stipulate that amendments may be made in a petition, reply, notice of intervention or notice of objections, and a proceeding is not to be defeated because of a defect of form or a technical irregularity in these documents. When a matter which the Board has referred to a referee for inquiry and report involves the taking of a vote, the Chief Executive Officer has power to determine who shall vote, where and when it shall be taken, and the form of the ballot. An application for leave to appeal to the Wartime Labour Relations Board is to be made within 15 days after the decision which is being appealed in a notice to all other parties concerned, setting out the grounds of appeal and filed with the Ontario Board.

Ontario Workmen's Compensation Act

An Order gazetted June 3 adds hotelkeeping, for which authority is held under the provisions of either the Liquor Control Act or the Liquor Authority Control Act, and the operation of a hospital, sanitarium or sanatorium to Schedule 1 of the Act, being the list of industries in which the employers are liable to contribute to the Accident Fund. When either of the two undertakings is carried on in conjunction with an industry already covered by the Act, it is to be considered part of that industry, but otherwise hospitals and hotels are both included in the same class as breweries, bakeries, the manufacture of dairy products, confectionery and tobacco. Creameries, dairies, confectioneries, bakeries, and butter manufacturing, when less than six workmen are employed, are no longer outside the collective liability system.

Quebec Lands and Forests Act

By an order gazetted May 13, the method of scaling sawlogs according to the measurement of the small end only and then increasing the volume obtained by 15 per cent for hardwoods and 20 per cent for softwoods, as authorized by an order of last November (L.G., 1944, p. 107), is to be continued for 1944-45, provided that the wages of pieceworkers are calculated according to two-end measurement.

Quebec Minimum Wage Act

Order 40 governing theatres on Montreal Island (L.G., 1943, p. 863) is renewed until July 1, 1945, by an Order gazetted May 15.

Quebec Public Health Act

Particular interest attaches to new regulations, gazetted June 3, for protecting the health of workers in industrial establishments. They require notification of industrial diseases and include special provisions for safeguarding workers exposed to dangerous dusts, gases and fumes, to benzol and its derivatives, lead and its compounds and other industrial poisons. Earlier by-laws relating to sanitation, ventilation, lighting, temperature, humidity, dusts and gases in industrial establishments issued by the provincial Board of Health (now the Bureau of Health) under the Act have been revised and considerably expanded by the new regulations. New regulations have also been made for ensuring sanitary conditions in dwellings, bakeries, hairdressing parlours, abattoirs, hospitals and public places such as schools, theatres, hotels, restaurants, etc., and otherwise preventing the spread of disease. The Director of the Division of Industrial Hygiene is made responsible under the Minister of Health and Social Welfare for the administration of the regulations relating to industrial establishments.

Industrial establishments: Establishments to which the regulations apply include factories, work-shops and yards, warehouses, plants, mines, quarries, industrial camps, undertakings without local yards doing construction and repairing work, undertakings engaged in commercial transportation and in digging tunnels or dredging rivers, and those carrying on div-

ing operations, work in open caissons or under compressed air and similar work. The new regulations forbid employers to use any process or substance or tolerate any condition which might affect the health of their employees unless adequate precautions have been taken to safeguard health. They stipulate that establishments proposing to handle lead, phosphorus, arsenic, mercury or their derivatives or compounds or likely to discharge gas, vapour, smoke or dust harmful to health must now have their plans approved by the Minister of Health and Social Welfare. In addition, the Minister is to determine the method of disposing of trade wastes and sewage for all establishments constructed in municipalities where there is no sewerage system. The previous regulations merely required all establishments to obtain permission to operate from the municipal authorities.

Under the Minister of Health, a medical officer, referred to as the Director of the Division of Industrial Hygiene is charged with supervising and ensuring hygienic conditions in workplaces, and with other duties imposed on him by the regulations. The Director has power to require improvements in lighting, the installation of artificial ventilation and the satisfactory removal of harmful dusts, gases, smoke or steam. Formerly a minimum for each worker of 1,000 cu. ft. of fresh air per hour at a temperature of not less than 60° F. was the standard specified for artificial ventilation but now the Director is given general power to prescribe the manner of entrance, temperature, velocity and quantity of air to be introduced into each work-room. The obligation to air the work-room twice daily and provide each worker with 400 cu. ft. of airspace during the winter months and the sanitation regulations for industrial establishments are unchanged. It is also stipulated that such establishments must conform to the general provisions of the Public Health Act and regulations under it in regard to drinking water, sewage disposal, plumbing and general sanitation. The temperature and humidity table for establishments where steam is introduced into the air, such as textile mills, has been replaced by a general clause authorizing the Director to specify, where necessary, the wet and dry bulb temperatures, relative humidity and air movement in work-rooms.

Control of Occupational Disease. It is now compulsory for physicians to notify the Director of all cases of poisoning by lead, phosphorus, arsenic, copper, methyl alcohol, mercury or their compounds and all cases of anthrax, caisson disease, silicosis (miners' anaemia), asbestosis or any other occupational poisoning or infectious disease. Notification must be on a form prescribed in the regulations within 24 hours of diagnosis. The name of the employer and the nature of the industry are to be indicated. The Director or his representative is authorized to make studies, investigations and recommendations to prevent occupational disease with respect to any industrial establishment.

Removal of Harmful Substances. The earlier regulations concerning the removal of harmful dusts, gases and fumes have been considerably expanded. As before, hoods with ventilating flues or cowls with vent-pipes connected with an efficient exhaust ventilation system are to be installed as close as possible to the point of origin of any harmful dust, gas or fumes. The pulverizing, screening and packing of irritating or toxic materials must be done mechanically in closed vessels. The Director may waive this requirement but in such case the workers must wear respirators or other protective equipment. In plants where only certain operations produce dust, gas or smoke, the Director may require that such operations be performed in rooms separate from the rest of the establishment and he may now also insist that the workers wear protective equipment in these rooms.

Respirators. New regulations have been been made concerning the use of respirators in places where harmful dusts or fumes cannot be satisfactorily removed. French and English copies of these regulations must be posted in the establishment. Employers are obliged to supply free of charge to each workman exposed to harmful substances a respirator approved by the Director. Respirators must be adapted to fit the individual and before being transferred to another workman must be sterilized by one of the two methods prescribed in the regulations or by any other method approved by the Director. A responsible person must be put in charge of respirators and see that they are kept in good repair, cleaned daily and renewed when necessary. When toxic substances are present the filtering cloth must be cleaned or renewed at least once a week. The filter of anti-dust respirators may be cleaned by compressed air or by shaking if made of felt or thick cloth. Respirators used for protection against toxic substances must be inspected weekly; those against dust, monthly; but employees may demand that their equipment be inspected at any time. Workers must immediately report all defects to their foreman or employer. Respirators not in use must be kept in a dust-proof closed receptacle.

Injurious Dusts. Special regulations are made for establishments where workers are exposed to harmful dusts. Pre-employment and annual

physical and X-ray examinations are required, supplemented by stereoscopic films in the case of workers exposed to silica or asbestos dusts if the radiologist so orders. Persons with any trace of present or past disease of the lungs or heart may not be employed. Employers must post notices warning workers that inhaling silica dust is dangerous to health and that failure to use the necessary protective equipment will render them liable to dismissal. Exhaust pipes, collecting vents and other protective apparatus must be kept in good condition and inspected once a month by a responsible person appointed by the management. He is also responsible for teaching employees how to use protective equipment and for supervising its use, repair and maintenance. A vacuum cleaner must be used regularly on all places where dust settles in dangerous quantities. Cleaning by compressed-air blowers and dry sweeping are forbidden. If dust rises, cleaners must wear protective equipment. Where possible, paper bags must be used for packing ground or unground sand and asbestos fibre. When cloth bags are used, they should be lined with paper.

Maximum Concentrations. A schedule is included in the new regulations specifying the maximum concentrations of certain harmful substances permitted in the air of workplaces. Some of the limits specified per million parts of air are as follows:—benzol, 75; toluol, 200; ether, 400; carbon bisulphide, 15; gasoline-naphtha, 1,000; aniline, 5; phosphene, 2; hydrochloric acid, 10; hydrogen sulphide, 20; phosgene and chlorine, 1; carbon monoxide, 100; sulphur dioxide, 10. Other limits expressed in milligrams per 10 cubic metres of air are as follows: lead, 1·5; mercury and cadmium, 1; zinc oxide fumes, 150; pentachlornaphthalene, 5; chlordiphenyl, 10; chromic acid, 1. The concentration of dust containing more than 90 per cent of free silica in the form of quartz (particles measuring less than 10 microns in their greatest dimension) must be less than 5 million particles per cu. ft. of air. The Director has power to prescribe limits for mineral dusts not specified. All substances not included in the schedule must be kept within limits not harmful to health.

Industrial Poisons. Manufacturers or distributors of poisonous substances for industrial use must label containers of lead, arsenic, mercury and hydrocyanic acid and their compounds and of benzol and its derivatives. The Department can also require them to furnish precise information on the composition of toxic substances which they sell. Labelling is not necessary if the lead compounds are used only as driers in the preparation of paints or in paints to be applied by brush or immersion.

In establishments preparing, using or distributing any of the above substances, notices in an approved form must be posted informing the workers of the dangerous nature of the substances and of the precautions to be taken. Any officer of the Department or any factory or mine inspector may, on the advice of the Director, require any worker employed, at the time of his visit or during the preceding six months, in any dangerous operation to undergo physical examinations at specified intervals. Reports of such examinations in a prescribed form must be forwarded to the Director within 48 hours.

Benzol and Derivatives. In establishments where benzol and its derivatives are used, the management must provide effective general and local ventilation. Where it is not feasible to eliminate the fumes altogether workers must be supplied with approved respirators. All workers must be given a medical examination once a year, supplemented by periodical examinations, including blood tests.

Lead and its Compounds. Every company using lead, its alloys or compounds must appoint a plant physician. Whenever a worker feels indisposed he must consult the physician and if symptoms of lead poisoning are observed, blood tests must be made to determine the red blood cell count and the differential leucocytes count. Workers who show symptoms of any type of lead poisoning must be withdrawn from work and may not be re-employed until they produce a certificate from the physician indicating their fitness to work. They may work, however, in parts of the plant other than those using lead without such a certificate. Both the worker and the employer must be informed when a diagnosis of lead poisoning is made and the employer must report the case to the Minister within 48 hours. With the co-operation of the plant medical staff, the employer must keep a record of the physician's monthly visits and observations and a register of all employees suffering from lead poisoning including details as to the nature and length of the illness and the worker's occupation.

Employers must furnish workers with overalls or other work clothing, separate dressing rooms for keeping street-clothes and work-clothes, a separate room for meals, wash-basins and a bath-room with shower, respirators where necessary and tools or other means to prevent the hands from touching any lead compound. Employers are responsible for care of equipment and clothing and for daily cleaning of respirators and weekly cleaning of overalls.

Workers must use the protective devices and clothing provided. They must remove their

overalls and hang them in the proper dressing-room and wash their faces and hands and rinse their mouths before eating and at the end of the day. They are forbidden to use tobacco for smoking, chewing or snuffing or to eat or drink anything in the workshops. They must take a bath at least once a week and are required to submit to the monthly medical supervision. Notices must be posted in the workrooms listing the workers' obligations and giving the name and address of the plant physician and indicating where and when he is available for consultation.

Each worker must have not less than 1,000 cu. ft of air-space and the shop must be at least 10 ft. high. Floors must have a waterproof coating and are to be thoroughly wet and cleaned daily. A coating of plaster (lime) or some other washable substance is prescribed for the walls and whitewashing at least once every three years is required.

Nothing is to be kept in the workroom except the raw materials, furniture, tools and machines needed for the work. Cleaning must be done so that workers do not absorb dust.

Lead products capable of releasing dust may not be touched with bare hands nor worked on unless wet except when the operation is done mechanically in a closed apparatus. Care must be taken to prevent the workers being splashed with harmful substances. Scaling, picking and crushing ceruse and massicot (white and yellow lead) must be done under water or on material freshly dipped in water and still dripping. Crushing and sifting these products or minium (red lead) must be done in a closed apparatus with rivetted or welded sheet-iron sides; and scraping, breaking and grinding must be done mechanically. Dry material may not be shovelled or carted in wheelbarrows or open carts.

Where it is impossible to eliminate the lead-poisoning hazards, workers may only be employed for limited periods to be determined by the Minister. They must alternate with other employees between this work and other jobs.

Posting of Regulations. As mentioned above, employers must post English and French copies of the regulations relating to respirators. In addition they must post notices informing workers of the hazards from silica dust and industrial poisons and indicating the precautions necessary for their protection.

Bakeries. Regulations for ensuring sanitary conditions in bakeries forbid employment in a bakery or in delivering bread of persons with an infectious disease including venereal disease and skin infections or those who are carriers of infectious disease germs. Workers must wear white, washable clothes in the bakery and leave their other garments outside. No tobacco may be used during kneading. Special attention must be given to washing hands frequently.

Other provisions relate to ventilation, lighting, cleaning, etc. It is forbidden to establish new bakeries in basements and existing ones may be used only if the basement has a minimum capacity of 1,500 cu. ft. and is at least eight feet high. Delivery conveyances must be closed and kept clean.

Hairdressing Parlours. Barber shops and beauty parlours must have permits from the municipal authorities. Persons suffering from erysipelas, contagious impetigo, scurf, boils, infectious syphilitic lesions or any other contagious disease may not be employed. Employees must wear a white jacket or uniform of easily washable material and wash their hands immediately before attending to a client. Establishments must be adequately lighted, ventilated and cleaned. Detailed provisions designed to protect clients from infection are included.

Miscellaneous Health Regulations. Other regulations provide for sanitary conditions in dwellings, abbatoirs, hospitals and other public places. It is stipulated that all persons employed in the kitchen or dining-room of a building open to the public must be in good health, free from infectious diseases including syphilis and tuberculosis and not germ carriers. They must wear clean outer garments and keep their hands clean while at work. In the regulations to protect the public against contaminated well-water, ice and food, it is also provided that persons engaged in selling or handling milk, meats or food must, at the request of the health officer or municipal health authority, prove by clinical and bacteriological examinations that they are not germ-carriers or suffering from an infectious disease. All persons employed in hospitals must be vaccinated against smallpox, typhoid and paratyphoid fevers and immunized against diphtheria. In addition they must be given thorough pre-employment medical and bacteriological examinations and X-rays. It is also stipulated that persons other than parents or guardians who take charge of a child under five for a consideration must report the fact to the municipal health authority within 48 hours, and if the child dies, must notify the authority within 24 hours. This provision does not apply to hospitals.

Quebec Pressure Vessels Act

New regulations were gazetted on May 6 cancelling all previous regulations under this

Act. They comprise rules for the construction, installation, utilization, operation, inspection and classification of pressure vessels and their accessories. The Codes of technical regulations about these subjects published by the American Society of Mechanical Engineers in 1942 and 1943 are used. The fabrication and installation of vessels in public buildings and industrial establishments must be inspected before the vessels are put into use and annually thereafter. Maximum allowable working stress to be used in the formulas of the Code is 9,600 pounds per square inch of steel plate of the quality specified in the Code. Regulations are laid down dealing with the repair of vessels and the requirements for using second-hand pressure vessels. A scale of fees for registration and inspection is given.

Saskatchewan Child Welfare Act

An Order in Council gazetted May 31 provides for increased payments to mothers in respect of dependent children. The monthly allowances are to be $15 for the first child, $10 for the second child, and $5 for each additional child.

Recent Legal Decisions Affecting Labour

Alberta Postal Worker Awarded Part of Claim under Minimum Wage Act—Rest Barred by Time Lapse

A woman who was suing the estate of her former employer for $868.85 in wages was granted $168.68 by Mr. Justice McLaurin in the Alberta Supreme Court on February 5 but was ordered to pay the costs of the action as the defendant had paid the amount of the award into Court with an allegation of tender. The claim represented the difference between the wage of $30 a month which she received from October, 1933, to August 31, 1936, and the minimum rate of $14 a week prescribed for clerical workers by Order 5 under the Female Minimum Wage Act. The court held that the claim for all but five and a half months of the period of employment was barred by the Limitation of Actions Act.

The woman had been employed by a postmaster in sorting mail, selling money orders and keeping records. The defendant contended that Order 5 did not cover this class of work but the Court rejected the argument.

The defendant also claimed that the plaintiff had no right of action, that the only remedy for an employer's failure to pay the minimum wage was the remedy provided in the section of the Act which stipulates that an employer who is convicted of failure to pay the minimum wage will be ordered to pay the employee the difference between the wages paid and the minimum rate. The Court observed that when a statute affirms a liability existing at common law and does not expressly exclude the common law remedy, a person may pursue either the common law remedy or the statutory remedy, if any; but when a statute such as a minimum wage Act creates a liability not existing at common law and provides a particular remedy for enforcing it, only the statutory remedy is available. However, the Court pointed out that since another section of the Minimum Wage Act declares that an agreement by an employee to work for less than the prescribed minimum is to have effect as if the minimum wage were stipulated in it, the minimum wage is incorporated in the contract of employment. The Court considered, then, that the particular remedies under the former section "have not the effect of abrogating the ordinary incidents of a contract of employment". Therefore the worker could sue for the minimum rate.

The defendant contended further that the action was barred under the Alberta Limitation of Actions Act. The latter stipulates that actions for penalties, damages or sums of money in the nature of penalties given by any statute to the Crown or the aggrieved person must be brought within two years of the cause of the action and actions for the recovery of money as a debt, damages or otherwise must be brought within six years. The Court held that the action was one for the recovery of money. Since, by agreement between the parties, the suit was treated as having been brought on March 17, 1942, the plaintiff's claim for the period March 17, 1936, to August 31, 1936, was within the six-year period but the remainder of the claim was barred. The Court rejected the plaintiff's contention that her wages were similar to a running or continuing account. It pointed out that since the wages were paid monthly and there was no suggestion during the period of the contract of any arrears owing, the cause of action for each item of the deficiency accrued at the end of each month and became barred after six years. *Sharp* v. *Public Administrator (Plummer Estate)*, 1944 2 Western Weekly Reports 28.

Ontario Court holds Company Responsible for Fire Caused by Negligent Use of Oxy-Acetylene Torch

Holding a company selling stoves responsible for a fire occurring while its employees were removing a stove from a hotel, the Ontario Court of Appeal on March 29 reversed the decision of a lower Court and ordered the company to pay $6,149.80 in damages to the hotel company and the costs of the case. The Court held that it was the defendant company's duty to use all reasonable care in selecting a competent person to carry out the work, in supplying proper tools and in performing the work so as to avoid injury to the premises. In the Court's opinion the company had not fulfilled this obligation.

The company's salesman, who had been sent with two mechanics to remove a range and canopy from the hotel kitchen preparatory to

installing an "aga cooker", decided that it was necessary to break up the range and canopy with an oxy-acetylene torch. He called in a local man who operated such a torch. When one of the pipes connecting the canopy with a duct for carrying off fumes was being cut, the accumulated grease in the duct was ignited by sparks from the torch and considerable damage resulted before the fire was extinguished. Mr. Justice Plaxton in the lower Court held that the hotel manager was responsible for the fire as he had interfered with the salesman's plans to have the pipes cut at the canopy by asking that they be cut nearer the main duct. The judge did not regard the torch as dangerous in itself and was of the opinion that the defendant had exercised reasonable care in executing the work.

The Appeal Court did not consider that the hotel manager could be held responsible as he had not intervened to the extent of taking control and direction of the work but had only offered a suggestion on a matter of detail. Moreover, there was no evidence to show that a fire would not have resulted from cutting the pipes at the point chosen by the salesman as no precautions were taken to prevent a fire. An oxy-acetylene torch was a dangerous instrument and if the company proposed to use such an instrument, it had a duty to see that it was used with due regard to the safety of the premises. In the Court's opinion the defendant had been negligent in the use of the torch.

Chief Justice Robertson, speaking for the Court, pointed out that the company had presented no evidence to show the need or propriety of using the torch, nor had it shown that its employee had any experience in the use of a torch or knew its dangers. He rejected the claim that the operator of the torch as an independent contractor was responsible, asserting that the defendant's employee was in charge throughout the work and the operator was working with the tools and in the manner designated by him. Even if the operator were an independent contractor, the principle had been established in a previous case that 'the responsibility for doing work of an inherently dangerous character safely could not be passed on to an independent contractor. Mr. Justice Kellock and Mr. Justice Gillanders concurred although the latter proposed that a new assessment of damages should be allowed if either party desired it. *Brockville Hotel Company Ltd.* v. *Aga Heat (Canada) Ltd.*, (1944) Ontario Weekly Notes 276.

U.S. Supreme Court Holds Terms of Collective Agreement to Supersede Inconsistent Terms of Individual Contracts

In a judgment rendered on February 28, the United States Supreme Court held that by virtue of the National Labor Relations Act a collective agreement entered into by a union supported by a majority of the employees in a bargaining unit supersedes inconsistent terms of any contract entered into by the employer and an individual employee. Thus the mere existence of individual contracts cannot be taken to prevent the negotiation of a collective agreement by a union which the Labor Relations Board has found to be entitled to bargain on behalf of the employees even if the terms of the proposed collective agreement and the existing contracts are in conflict.

The Court therefore affirmed in principle a decree of the Circuit Court of Appeals for the Seventh Circuit requiring the J. I. Case Company at its Rock Island, Illinois plant to comply with an order of the National Labor Relations Board. The Board order required the company to cease and desist from giving effect to existing individual contracts of employment, from extending them or entering into new ones, from refusing to bargain with a union which the Board had found to represent a majority of the employees and from interfering with the employees in the exercise of their rights, and further required the company to bargain with the union on request. One member of the Supreme Court dissented from the majority opinion without giving reasons.

Since 1937 the company had been offering to each of its employees an individual contract of employment which ran for one year and was renewed as necessary. About 75 per cent of the employees were working under these contracts when in 1941 a union affiliated with the Congress of Industrial Organizations petitioned the Labor Relations Board for certification as the exclusive bargaining representative of the production and maintenance employees. In the hearings held on December 17, 1941, the company argued that the individual contracts were still in effect and were a bar to representation proceedings. The Board rejected this reasoning and ordered an election which was won by the union.

The Board then certified the union as the exclusive bargaining agent, but when the union asked the company to bargain, its request was refused. The company twice sent circulars to its employees asserting the validity of the individual contracts and stating the position it had taken before the Board.

The Board thereupon issued the order mentioned above and the Circuit Court of Appeals granted an order of enforcement. Since the issues were unsettled ones which were important in the enforcement of the Labor Relations Act, leave was granted to appeal to the Supreme Court. The Supreme Court affirmed the Circuit Court's decree, although it clarified it in certain respects.

In giving the opinion of the Court, Mr. Justice Jackson stated that though a collective agreement is rarely a contract of employment in that "no one has a job by reason of it and no obligation to any individual ordinarily comes into existence from it alone", nevertheless it is similar

> to the tariffs established by a carrier, to standard provisions prescribed by supervising authorities for insurance policies or to utility schedules of rates and rules for service, which do not of themselves establish any relationships but which do govern the terms of the shipper or insurer or customer relationship whenever and with whomever it may be established.

An individual contract is a necessary complement to a collective agreement in that it is through this contract that the act of hiring is consummated and the persons to whom the

collective agreement applies are identified. The individual contract, however,

> is subsidiary to the terms of the trade agreement and cannot waive any of its benefits, any more than a shipper can contract away the benefit of filed tariffs, the insurer the benefit of standard provisions, or the utility customer the benefit of legally established rates. . . . The very purpose of providing by statute for the collective agreement is to supersede the terms of separate agreements of employees with terms which reflect the strength and bargaining power and serve the welfare of the group.

The terms of employment set out in an individual contract can be regarded as valid only in such cases as when no union is designated by the majority as their bargaining agent or when the union loses its majority without interference by the employer or when a collective agreement expires and there is an interval before a new agreement is reached in spite of negotiations in good faith.

The Court agreed that some employees may be able by themselves to get better terms than can be obtained by the group, but it did not consider that to be a ground for holding that such contracts can take precedence over collective agreements.

> The practice and philosophy of collective bargaining looks with suspicion on such individual advantages. Of course, where there is great variation in circumstances of employment or capacity of employees, it is possible for the collective bargain to prescribe only minimum rates or maximum hours or expressly to leave certain areas open to individual bargaining. But, except as so provided, advantages to individuals may prove as disruptive of industrial peace as disadvantages. They are a fruitful way of interfering with organization and the choice of representatives; increased compensation, if individually deserved, is often earned at the cost of breaking down some other standard thought to be for the welfare of the group, and always creates the suspicion of being paid at the long-range expense of the group as a whole.

The worker who prefers to bargain individually is free to vote against group representation, but he must be governed by the decision of the majority. *J. I. Case Company v. National Labor Relations Board,* 14 Labor Relations Reporter 17.

Dust-Control in Australian Foundries

The Australian Department of Labour and National Service has recently examined working conditions in 28 foundries to determine the occupations involving serious exposure to dust and the most effective dust-control measures. The results of the survey have been published under the title *Dust Hazards in Australian Foundries.*

Studies made in other countries have shown that foundry workers are exposed to a silicosis risk which increases with length of exposure and is greatest in such processes as sandblasting, chipping, moulding, rumbling, casting-cleaning and grinding. The Australian investigation confirmed these conclusions. The most serious dust concentrations were found in abrasive blasting, chipping, and cleaning castings with wire brushes. Dust-Control measures recommended for the various foundry processes ranged from installing exhaust ventilation to substituting materials containing less silica than ones at present in use. For example, the use of shot instead of sand was suggested for abrasive blasting. It was urged that all grinding wheels should be provided with exhaust ventilation. Cleaning castings with wire brushes was considered a dangerous practice but where it is impracticable to adopt a more efficient cleaning method, the work should be done in an exhausted booth.

It was pointed out that good housekeeping is of special importance in foundries. Vacuum methods of cleaning were recommended in preference to the use of an air blast which merely disturbs the dust without removing it. Improved general ventilation can also reduce the dust hazard. Most foundries had insufficient roof openings. Saw-tooth roofs were condemned and Monitor or Inverted Monitor types recommended.

As a general standard of permissible dust-concentration, the department recommended that the average exposure over a complete cycle of operations should not exceed 500 particle-hours per cubic centimetre when the dust contains less than 50 per cent of free silica. If the dust has more than 50 per cent free silica, the average exposure should not exceed 200 particle-hours per cubic centimetre. This standard is based on measurements made with the Owens Jet Dust Counter. It was qualified by the following comment:

> "It is not suggested that men may work in this concentration of dust without any danger of developing silicosis or fibrosis. It is suggested, however, that this standard can be easily attained by the industry and that by so doing the working conditions in foundries will be vastly improved.

Prices and Price Control

Price Control in Canada, October, 1943, to March, 1944

Activities of the Wartime Prices and Trade Board in Controlling Prices and Maintaining Supplies for Civilian Purposes

WAR production showed signs of slackening in some directions in the first part of the period reviewed in this summary, but later new war requirements arose and manpower and material needs for war and essential purposes continued to be very heavy. Civilian production, therefore, continued to be exposed to the strains and shortages inevitably resulting from the magnitude of the Canadian war effort. Most of the problems that arose in this period were not essentially new, and the Wartime Prices and Trade Board dealt with them by the continuation and adaptation of policies previously inaugurated. New features arose mainly in the metals field, owing to a temporary improvement of supplies.

Foods

Fruits and Vegetables.—Following the establishment of maximum prices for the more important kinds of late summer fruits, maximum prices were set in October for vegetables stored in the winter season—beets, carrots, parsnips, turnips and cabbage. Somewhat higher prices were fixed for carrots and beets when sold in bunches with full fresh tops. In addition the prices charged by distributors of various imported fruits and vegetables were brought under control. An order issued in February dealt with some 37 kinds of imported fruits and vegetables including grapefruit and lemons, raspberries, cherries, melons, beans, peas, tomatoes, asparagus, etc.

Importers were required to base their selling price on the actual price paid by them in the United States, not exceeding the United States maximum price, where such a maximum price has been fixed by the Office of Price Administration. The order fixed maximum markups that could be added at wholesale and retail. It was revised in April in order to permit importers to base their selling price on the OPA ceiling price instead of actual costs, if their costs are below the ceiling.

In order to assure that supplies of fruits and vegetables are available at reasonable prices and are equitably distributed, the Wartime Food Corporation was given power to divert shipments to deficiency areas, to bulk purchase and allocate supplies and to pay subsidies. In January the Corporation took control of potato shipments in Eastern Canada owing to local shortages in several urban centres. The Corporation brought in shipments from British Columbia and the United States until a normal flow of supplies was re-established.

The scarcity of fruits and vegetables for canning in the summer of 1943 led to a shortage of canned fruits and vegetables for the 1943-44 season. In order to conserve supplies during the season when fresh products were on the market, sales of canned fruits and vegetables were suspendeed in July, 1943. Canned fruits were released in September, and were rationed along with preserves. Canned vegetables were released in November and their distribution was controlled by the Board. They were not rationed on a per capita basis since many Canadians use no canned vegetables or extremely small quantities, while others use them as a regular part of their diet. The distribution of canned vegetables was, therefore, controlled by directing canners and wholsalers to distribute their supplies among their customers in proportion to the quantities delivered to each customer in the twelve-month period ended June, 1942. Retailers were directed to sell only a stated percentage of their total allocations each month to ensure that the goods would flow evenly to the public during the winter and spring. Canners were required to retain a certain portion of their stocks which was reserved to meet the requirements of the armed forces, ships' stores, export commitments, etc. Special quotas based on a per meal allowance were established for hospitals, remote lumber camps, construction camps, and similar "preferred users".

Meat and Fish.—Meat rationing was suspended on March 1. It had been introduced in order to create an increased surplus for export to the U.K. and to ensure equitable

distribution of the supplies remaining in Canada. However, a surplus of meat accumulated in Canada owing to heavy marketings of live stock and limitations on transportation facilities and dock labour. In view of the limitations on cold storage facilities it was considered advisable to suspend meat rationing, and "meatless Tuesdays", although rationing may be resumed if conditions require it.

Owing to the difficulty of controlling maximum markups on retail cuts of meat, a system of standard retail prices was introduced for beef in September, and extended to lamb and veal during the period under review. In the case of both lamb and veal a system of standard retail cuts was established to which retailers were required to conform, and standard maximum prices were set for these cuts in each of 15 zones. Every retailer was required to display a chart, supplied by the Board, showing the standard retail cuts and a chart showing the maximum retail prices set for that particular zone.

During the period under review price control was extended to many of the varieties of fish that had previously been exempt, since rising prices in the United States had been reflected in prices charged in the domestic market. A number of new orders were issued, dealing with both Atlantic and Pacific coast fish, and by the end of March maximum prices at the processor, wholesale, and retail levels had been fixed for all important varieties of salt water fish.

Dairy Products.—A serious shortage of evaporated milk developed in the fall of 1943, owing to greatly increased requirements, particularly for camps and training centres of the Armed Forces, and to the emphasis on fluid milk and cheese production. A system of priority sales was introduced by which, in areas in which fluid milk supplies were adequate, evaporated milk could only be obtained by special classes of consumers against ration documents. Special ration cards were issued for infants under two years of age and persons requiring evaporated milk for reasons of health. Quota arrangements similar to those in effect for other rationed foods were made to provide supplies for hospitals and other essential users. This method of curtailing consumption released supplies that could be diverted to areas deficient in fluid milk.

Owing to the diversion of milk from butter production to fluid milk and cheese production, butter production in the winter months was well below production in the corresponding period of the previous year. In order to safeguard supplies, the butter ration was temporarily reduced by dropping one coupon during the month of March, thus reducing the weekly ration from 8 oz. to 7 oz. per person for the eight weeks' period March-April. A similar reduction in the ration was made in June.

Preserves and Sugar.—Improved supplies made it possible in February to double the ration of most preserves. The ration of jams, jellies, marmalade, honey, honey butter, molasses, fountain fruits, canned fruits and maple butter was doubled. The maple syrup ration was raised to 40 fluid ounces until the end of May, in order to facilitate the customary quantity sales in the spring production season. The ration of maple sugar was raised from one-half pound per coupon to two pounds. Canned blueberries, crabapples and rhubarb were temporarily suspended from rationing so as to clear stocks before the fresh fruit crop appeared on the market in quantity. Ten pounds of sugar per person were made available to consumers for home canning in the 1944 production season and in addition, consumers who do not use their preserves coupons for purchasing manufactured preserves could obtain sugar for them at the rate of one-half pound per coupon.

Apparel

Guidance of Production.—Informal direction of production in the yarn and cloth field and assistance to garment producers in obtaining materials has been carried on by Board Administrators to an increasing extent, but it was not until the latter half of 1943 that continued shortages of materials and labour required direction of production by the Board in the garment manufacturing field. This action has usually taken the form of "directives" requiring each firm to achieve a specified output of certain garments. In some cases allocation of materials has been sufficient. The directives have been accompanied by offers of assistance in obtaining materials and labour. While important clothing fields, such as men's fine clothing and women's and misses' wear, have not required special assistance, directives have been adopted in the following branches of the industry: winter underwear (August, 1943), infants' and children's wear (October, 1943), boys' heavy clothing and men's woollen work clothing (November, 1943), heavy work socks (December, 1943), fine socks (April, 1944). These programs cover the entire year 1944.

Relaxation of Restrictions.—Some easing of the wool fabric supply and a desire to achieve long-run clothing economy led to an order allowing fuller wool skirts for children and removing the prohibition on patch pockets on the skirts of women's two-piece dresses, on separate skirts and children's coats. Restrictions were also removed on the width of hems in children's garments, in pyjamas and in slips.

Identification Labelling.—To improve price control at the retail level and to assist investigation of complaints of deterioration of quality, provisions requiring labelling have been written into pricing orders covering a wide range of clothing.

Such pricing orders require manufacturers producing new styles of clothing or using new materials to submit cost sheets and other particulars, as well as samples of the cloth used, to the Administrator in order to have a maximum manufacturer's price fixed. The Administrator thus has particulars of every additional style produced by a manufacturer, the material or materials used, and the maximum price. During the period under review, and prior to it, many of these orders were revised, and manufacturers were required to show on each garment their licence number, name or registered trade mark, and the style number and size. This requirement was extended during the six months under review to men's and boys' shirts, pyjamas and flat-cut underwear, work clothing, women's, misses' and children's wear and knitted goods.

Labour.—The labour situation in the textile industry became serious during 1943 and from August onward strenuous efforts were made by National Selective Service and the Wartime Prices and Trade Board, to obtain labour for such critical sections of the industry as primary textiles, knit goods and children's clothing. These measures continued into the spring of 1944 and have produced improvement in most lines, and in others, such as the primary cotton and woollen industries, have had the effect of arresting the decline in the labour force. In December a greatly increased program for the production of work socks for the Armed Services and for essential civilian supply called for additional labour, and National Selective Service provided a number of establishments in that branch of the industry with priorities and other special assistance.

Cotton Import Arrangements.—Before the war Canada normally obtained from the United Kingdom large quantities of cotton fabrics not available in this country. Between 1938 and 1942, these imports declined to about half their previous volume and were to some extent replaced by importations from the United States. Finally, in July, 1943, an arrangement was made between British and Canadian authorities, providing that Canadian imports of British fabrics would henceforth be reduced to about 675,000 pounds of fabric per annum as compared with previous annual imports of five to ten million pounds. In the fall of 1943, the transfer of these fabric requirements to the United States was effected and the Board arranged new sources of supply in that country to fill the important gaps left in Canadian supplies.

Importation of high cost United States cotton products involved an increasingly heavy subsidy burden, and at the end of March, steps were taken to ease this by removal of the War Exchange Tax on importation of raw cotton, linters, yarns and woven fabrics.

Measures were also adopted to facilitate the importation under subsidy of cotton sheets, pillow cases, diapers, towels and wash cloths, to meet a shortage of domestic supplies.

Footwear.—While scattered shortages of juvenile footwear occurred earlier, they became widespread only in the last four to six months of 1943, as inventories became impaired owing to unusually heavy demand and difficulty in procuring the necessary labour to maintain maximum production. In an effort to meet the problem, the Administrator of Footwear issued, on November 5, production directives to the principal manufacturers of juvenile footwear, requiring them to manufacture during the year beginning December 18, 1943, a quantity of juvenile shoes calculated to meet essential requirements. Measures were taken by the Footwear and Hides and Leather Administrations to assure supplies of raw materials, and, at the request of the Board, National Selective Service is giving special attention to the labour requirements of the manufacturers.

Paper and Paperboard

Supplies of paper, newsprint, paperboard and other pulp products reached a critically low level in the Fall of 1943, owing to the shortage of labour for pulpwood cutting in preceding seasons. In order to maintain supplies National Selective Service took steps to increase the labour force in the woods and the Board introduced conservation measures designed to make supplies of pulp and its products go as far as possible.

Newsprint.—Supplies of woodpulp for newsprint were stretched by the use of clay filler and a reduction in the sulphite pulp content of the paper. This wood extension programme reduced by about 4 per cent the amount of wood used per ton of newsprint.

Other papers.—Supplies of fine paper and converted paper products were conserved by restrictions on their end use and the reduction of weights. In many cases simplification orders that had been designed chiefly to save labour and machine time were amended by adding restrictions on the weight of paper that could be used or manufactured, or reducing maximum weights previously fixed. The use of printed

matter for commercial purposes was greatly restricted in November, quotas being established for the larger consumers. Advertising or promotional printing was restricted to 75 lbs. of fine paper or one ton of newsprint per quarter.

Containers.—Increased war and civilian orders, labour shortage and shortages of pulp and paper led to a critical shortage of solid fibreboard and corrugated shipping cases, as well as smaller paperboard containers. In the Fall these industries were unable to keep up with essential orders and measures were taken to ensure the most effective use of materials, labour and plant facilities.

A system of priorities for orders of shipping cases was established in November, and two weeks later quotas were set for the use of shipping cases in packaging various classes of commodities, based on the user's consumption in a previous period. Other restrictions included the elimination of non-essential types of shipping cases and restrictions on users' inventories.

The shortage of smaller paperboard containers led to the prohibition of the manufacture of less essential types such as dummy display boxes and soft drink bottle carry-outs, and the simplification of others, e.g., boxes for cosmetics and for chocolate and confectionery.

Lumber and Wood Products

Lumber.—The pressure of rising costs of production in lumbering led to a final upward revision of prices of softwood lumber in the Summer and Fall of 1943. These price increases were passed on through wholesale and retail distributors, but subsidies to retailers provide for compensatory discounts to consumers such as farmers, fishermen and others who use lumber in production or for maintenance and repair purposes. In October, however, the Timber Controller announced that no further price increases for lumber sold in Canada would be granted for the duration of the war, since further inflation of prices and costs would endanger the government's stabilization policy and would have adverse effects on the industry when more normal conditions arise. A final adjustment in the prices of B.C. coastal logs was made on April 1, 1944, to bring log prices in line with the increased lumber prices. To reinforce stability of prices the Board clarified and standardized the maximum retail price structure for lumber and millwork in all areas.

Furniture.—Increased costs of lumber continued to lead to difficulties in industries using wood as a raw material. In the furniture industry, costs had been rising owing to the substitution of hardwood and fibreboard for metal. In particular, the change from metal springs to wooden construction led to price increases during 1943 and in November a subsidy on certain types of household furniture was authorized. However, subsequent relaxation of restrictions on the use of metal for springs made it possible to reduce manufacturing costs of upholstered furniture, and in addition it was found that the distributive trades were able to absorb more of the increased costs. The subsidy on upholstered furniture was, therefore, discontinued in January, 1944, and new upholstered furniture with metal springs and other metal parts was priced somewhat lower than the maximum prices prevailing in 1943. The subsidy on "hard" wooden furniture for household use was reduced, and manufacturers were permitted to add a surcharge to their selling price, to be absorbed by the retailer. In accordance with the Board's policy of paying subsidy only on consumer goods, office furniture and school furniture were not subsidized, but manufacturers were permitted to increase prices by an equivalent amount.

Woodenware.—Increased lumber costs were also reflected in the difficulties of manufacturers of boxes and shooks, who were unable to continue selling under basic period ceilings. Price adjustments were made on an individual basis during 1943 and were generalized by an order issued in February, 1944. In addition, however, it was necessary to arrange for subsidy to manufacturers in Manitoba and Saskatchewan and in the interior region of British Columbia. Subsidies are paid on a number of other woodenware items, many of them arranged on an individual basis.

Pulpwood.—During 1943 increasing difficulty in ensuring adequate supplies of pulpwood for domestic and export requirements was experienced in Eastern Canada. In part this difficulty arose through the wide spread prevailing as between the domestic ceilings and export prices which were not controlled.

As a means of narrowing the spread between domestic and export prices a joint move was made early in 1944 by the Office of Price Administration in the United States and the Wartime Prices and Trade Board whereby domestic ceiling prices in Quebec, New Brunswick and Nova Scotia were increased by approximately 5 per cent and import ceilings on pulpwood moving from the areas mentioned to the Northeastern United States were established.

Import ceilings established by the OPA are predicated on the revised domestic ceilings and established a differential more in keeping with that prevailing in the basic period.

Metals

The six months period under review saw some revision of the system of controls that had been established earlier in the war to restrict directly the production of metal civilian goods. Many of the controls now administered by the Wartime Prices and Trade Board were imposed at a time of emergency by the Wartime Industries Control Board when the controls of the latter Board over allocation of raw materials were still being developed. At that time also the machinery of manpower control was not in existence, and the metal use controls served to economize the use not only of metals but of labour. However, as new controls over manpower and materials were developed many of the emergency metal use controls have gradually become superfluous, and in many cases their continued existence would have unnecessarily handicapped resumption of civilian output when and as material and labour supplies permitted. The control system therefore was reviewed in the last quarter of 1943. There was a slight improvement in the civilian supply of certain metals, and the serious shortage of lumber made it advisable to permit manufacturers to revert to the use of metal in the manufacture of some of the articles and parts in which wood had, at an earlier stage, been substituted for metal. This also led to a saving in labour and reduction of costs in the manufacture of some articles, such as furniture. Other simplification restrictions that were felt to be redundant or unsatisfactory in their operation were modified or removed.

This review and revision of the existing control system as it affects metals will facilitate reconversion to civilian production at a future date, but it does not imply that facilities will now be made available. This depends, as in the past, on the supply of metals controlled by the Wartime Industries Control Board, and of labour controlled by National Selective Service.

While in a number of cases production limitations have been lifted, many restrictions on the number of sizes, types, models, etc., have been retained, since such simplification is important in keeping down costs of production and in making the best use of limited metal supplies. In some instances, however, limitations on new models or the number of types allowed or the requirement to manufacture to certain specifications have been lessened or removed because formal restrictions are no longer necessary. This has happened in the case of metal furniture and casters, jewellery, builders' hardware, heating and plumbing equipment, certain electrical apparatus and other articles.

It became clear, late in 1943, that supplies of a number of household appliances had fallen to an uncomfortably low level. The Board prepared estimates of civilian requirements of washing machines and irons, which were submitted to the Wartime Industries Control Board where decisions were made as to what materials, and plant facilities could be spared. Production was resumed on a very limited scale so as to meet the most urgent requirements. A program was also introduced for the production of cutlery. In March, restrictions on the manufacture of electric cooking stoves were relaxed somewhat, and in the twelve months ending February 28, 1945, manufacturers are to be permitted to produce 40 per cent of the electric stoves manufactured by them in 1940, and 60 per cent of their 1940 production of rangettes and cooking plates or grills. Actual production will, however, depend on the availability of materials, plant facilities and labour. Care is taken to ensure that an adequate proportion of low priced lines will be produced.

Personal and Household Effects.—Owing to the shortage of durable household goods, prices charged on sales of personal and household effects, which had been exempt from ceiling regulations, had risen considerably. Prices in excess of those of new goods had been charged and there was a danger of the development of a black market through persons buying up goods and selling them at a higher price as personal and household effects. An order designed to control this practice was issued in November. It set maximum prices on sales as personal and household effects of those articles for which used goods ceilings have been fixed by the Board. The goods so far affected include binoculars, cameras, lenses and photographic equipment, domestic sewing machines, domestic electric washing machines, mechanical household refrigerators, metal beds and springs, radios, stoves, typewriters and vacuum cleaners. Where the goods have been owned by the seller for less than six months, the ceiling on sales of personal and household effects is the price current for used goods of the same kind sold at retail in the locality. Goods that have been acquired more than six months before sale may be sold at the retail price current for new goods in the locality. It is expected that in this way the speculative buying and selling of household appliances will be greatly reduced.

Prices, Retail and Wholesale, in Canada, May, 1944

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

ON the five-year base 1935-39 = 100 the Dominion Bureau of Statistics official cost-of-living index advanced 0·1 to 119·2 between April 1 and May 1, 1944, for a war-time increase to date of 18·3 per cent. Group changes were small, foods rising 0·2 to 131·7 on increases for cabbage, carrots and oranges which outweighed declines for potatoes, eggs and certain meats. The clothing series was 0·1 higher at 121·5 while home furnishings and services recorded a similar change to 118·5. Fuel and lighting registered a decline of 0·5 to 112·5, reflecting authorized decreases in western domestic coal and removal of the provincial sales tax on coal in Quebec. Rentals at 111·9 and miscellaneous items at 109·0 were unchanged.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1943

BASE: PRICES IN JULY, 1914 AND IN AUGUST, 1939=100

* Descriptions and units of sale apply to May, 1944, prices.
† Nominal price.

each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a $4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between $600 and $2,800 in 1938. The average expenditure was $1,413.90, divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last-named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30;

(b) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(c) Rents marked (c) are for apartments or flats. Other rent figures are for single houses. Apartment and flat rents have been shown where this type of dwelling is more common than single houses.

(f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised

recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index brought the total family living expenditure to $1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home furnishings, etc., with their weights, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE under the title, *Price Control in Canada.*

Wholesale Prices, May, 1944

Last month's reversal of trend in the general level of wholesale prices continued in May, the composite index declining a further 0·4 points to 102·5. Weakness in animal products was mainly responsible, the index for this series registering a drop of 1·3 to 106·3 on lower prices for furs, canned lobster, whitefish, butter and eggs. These outweighed firmness for steers, lambs and lard. In the vegetable products group a recession of 0·5 to 94·9 reflected declines for potatoes and rye which overbalanced strength in oranges, lemons, onions, hay and rosin. Wood, wood products and paper, the only other group to record a change in May, stiffened 0·2 to 118·0 due to higher prices for eastern spruce and hemlock. May index levels for the remaining groups were 91·9 for fibres, textiles and textile products; 117·1 for iron and its products; 79·7 for non-ferrous metals; 102·8 for non-metallic minerals and 99·9 for chemicals and allied products.

Canadian farm product prices dropped 2·2 points to 101·8 in May on lower quotations for both field and animal products. A drop of 3·8 to 119·6 in the latter series reflected lower prices for fluid milk and eggs which overbalanced strength in livestock. Lower milk prices reflected a reduction of 20 cents per cwt. to 35 cents in the producer subsidy, effective May 1, 1944. Declines in potatoes and rye were more than sufficient to outweigh upturns in onions and hay to lower the field products section index 1·2 to 91·2.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

Minister—Hon. HUMPHREY MITCHELL

Deputy Minister—ARTHUR MACNAMARA

Assistant Deputy Minister—V. C. MACDONALD

Editor—HARRY J. WALKER

VOLUME XLIV] JULY, 1944 [NUMBER 7

Notes of Current Interest

Post-war employment survey

The Department of Labour is initiating a Post-war Employment Survey, it was announced recently by the Hon. Humphrey Mitchell, Minister of Labour. The work is being carried through under the Research and Statistics Branch of the Department.

For a start it is planned to survey establishments with 200 or more employees. Construction, governmental administrative offices, national defence establishments, crown companies and hospitals will not be included—but industry generally will be covered. Later it is planned to make sample surveys among smaller firms.

The Department has been advising interested employers by letter that they will shortly be called upon by interviewers. The services of officers from the Employment and Selective Service Offices will be utilized for this field work.

It is planned to secure details from management itself in regard to the probable effects of a termination of hostilities in so far as the individual firm is concerned. The key question asks how many workers will be employed when the war is over and peace-time production is re-established.

Such matters as plans already laid for post-war conversion, the time required for post-war plant conversion, the facilities available for post-war occupational training, the return of members of the Armed Forces to their former employment, estimated decreases in staff on the termination of war contracts and plans for the development of new products or services in the post-war era will all be made the subjects of inquiry.

The Labour Minister added that firms so far approached have not only shown interest in the project, but in most cases have reacted enthusiastically. While the survey will require several weeks for its completion, it would be hoped that at least preliminary results will be available well before the end of 1944.

Reinstatement of veterans in former employment

"Up to the present time the Labour Department has not found it necessary to enter a prosecution against any employer for failure to replace a member of the Armed Forces, after discharge, in his former employment," Hon. Humphrey Mitchell, Minister of Labour, stated recently. "It would seem that employers are anxious to carry out the terms of the Reinstatement in Civil Employment Act."

The Department of Labour, responsible for the administration of the Act, handles actual cases through the Employment and Selective Service Offices. While there have been many enquiries from employers and ex-members of the Forces in regard to the provisions of the legislation, local Employment Offices report that up to this time all cases coming to their notice have been adjusted satisfactorily. Under the Act a discharged member of the Forces may undertake on his own behalf a prosecution of an employer who refuses reinstatement, but officials of the Labour Department have no knowledge of any such prosecution having been started up to this time.

12558—1½

Under the Act employers are required to reinstate war veterans in their original jobs, or to re-employ the ex-member of the Forces under conditions "not less favourable than those which would have been applicable to him had he remained in the employment of the employer". The Act applies equally to men and women in the Services, who were at least 3 months in their employment before acceptance by the Forces. Where two or three persons left an identical job for the Forces, the first to leave is the one entitled to reinstatement.

A recent interpretation of this clause is that when an ex-member of the Armed Services is physically unable to carry out his former duties, the employer must place him at any work which the applicant can do. Where a change in the firm's production program makes reinstatement in a former occupation impossible, the discharged person must be placed in "the most favourable occupation and under the most favourable conditions reasonably practicable".

Some cases have arisen which involve reinstatement in employment covered by trade union agreements. In each case it has been the policy to insist on reinstatement in the spirit required by the legislation, but the effect of any existing trade union agreement in such a matter as seniority has to be considered.

Ex-members of the Armed Services have three months if discharged in Canada, or four months if discharged overseas, to apply for reinstatement in the job held before entering the Armed Forces. However, a person may lose the right to reinstatement: 1) if he or she fails to apply within the time limit; 2) if, having applied, the applicants fail to present themselves for employment at the time and place set by the employer; or 3) if the person resigns the job before or after entering the Forces, instead of taking leave of absence for the duration of military service.

The Act does not apply to Dominion or Provincial government employees. Reinstatement in the Dominion public service is covered by a separate set of Regulations, while the Provinces have regulations of their own.

The Reinstatement Act also applies to civilians who have been directed under National Selective Service Civilian Regulations to transfer to work under another employer. Such persons are entitled to reinstatement in their original jobs when the higher priority work has been completed. Cases of civilians returning to former employment have necessarily been rare up to this time.

The Labour Department states that members of the Forces now being discharged, not entitled to reinstatement in a former job, are experiencing no difficulty in securing immediate employment. National Selective Service offices have high priority vacancies waiting for every one now being discharged from the Armed Services.

Family allowances proposed by Prime Minister

A scheme of family allowances, to consist of a sum of money paid each month by the Government in respect of each child in Canada under sixteen years of age, has been proposed by the Prime Minister, Rt. Hon. W. L. Mackenzie King. The allowances would vary in amount with the age of the child, rising by stages from five dollars a month in the case of children under six, to eight dollars for children between thirteen and sixteen. In the case of families of more than four children, the allowance is reduced in respect of the fifth child and additional children. Reductions in income tax at present allowed to taxpayers by reason of children are to be reduced in proportion to the amount of the family allowance that will be payable under the new measure.

The text of the Prime Minister's resolution is as follows:

Resolved, that in order to ensure a greater measure of well-being to the children of the nation and to help gain for them a closer approach to equality of opportunity, it is expedient to introduce a measure to provide:

1. That family allowances, effective as from the first day of July, 1945, be paid in respect of each child in Canada under sixteen years of age, in accordance with the following scale:

in respect of a child less than six years old, five dollars per month;

in respect of a child six or more years old but less than ten years old, six dollars per month;

in respect of a child ten or more years old but less than thirteen years old, seven dollars per month;

in respect of a child thirteen or more years old but less than sixteen years old, eight dollars per month;

Provided that the above rates shall be reduced:

by one dollar per month in respect to the fifth child;

by two dollars per month in respect of the sixth child and seventh child; and

by three dollars per month in respect of the eighth child and any additional child or children.

2. That the reduction in tax under the Income War Tax Act allowable to a taxpayer by reason of a child shall be reduced by an appropriate amount based upon the family allowances payable under the said measure.

3. That the amounts required under the said measure be paid out of unappropriated moneys in the Consolidated Revenue Fund.

4. That the expenses necessary for the administration of the proposed Act be paid out of the moneys appropriated by Parliament for such purpose.

The annual net cost of the plan it was announced, is estimated at approximately $200,000,000.

Employment and industrial statistics

The table below shows the latest statistics available reflecting industrial conditions in Canada. Figures published by the Dominion Bureau of Statistics show at May 1 a recession in industrial employment for the fifth successive month. The trend for this date, as was the case for May 1, 1943, does not conform with the seasonal movement for earlier years since 1920. The index was 178·2 at May 1 and 180·5 at April 1 as compared with 178·2 at May 1, 1943 and 106·2 at May 1, 1939. The 14,539 establishments reporting to the Bureau showed a total working force of 1,796,340 at May 1, which was 1·3 per cent smaller than at April 1. The total weekly wages and salaries paid to these employees
